

High Dividend U.S. Equities: DIV provides access to 50 of the highest dividend yielding equities in the United States.

KEY FEATURES

High Income Potential

DIV accesses 50 of the highest dividend paying equities in the United States, potentially increasing a portfolio's yield.

Monthly Distributions

DIV makes distributions on a monthly basis, and has made distributions each month for over five years.

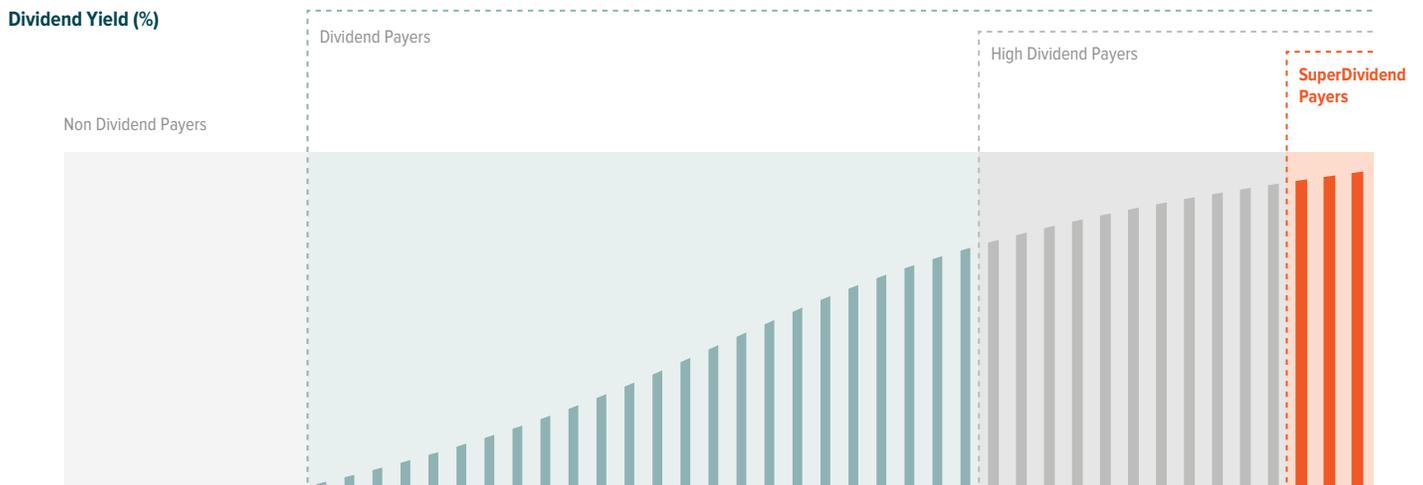

Low Volatility

DIV's index methodology screens for equities that have exhibited low betas relative to the S&P 500 in an effort to produce low volatility returns.

THE CASE

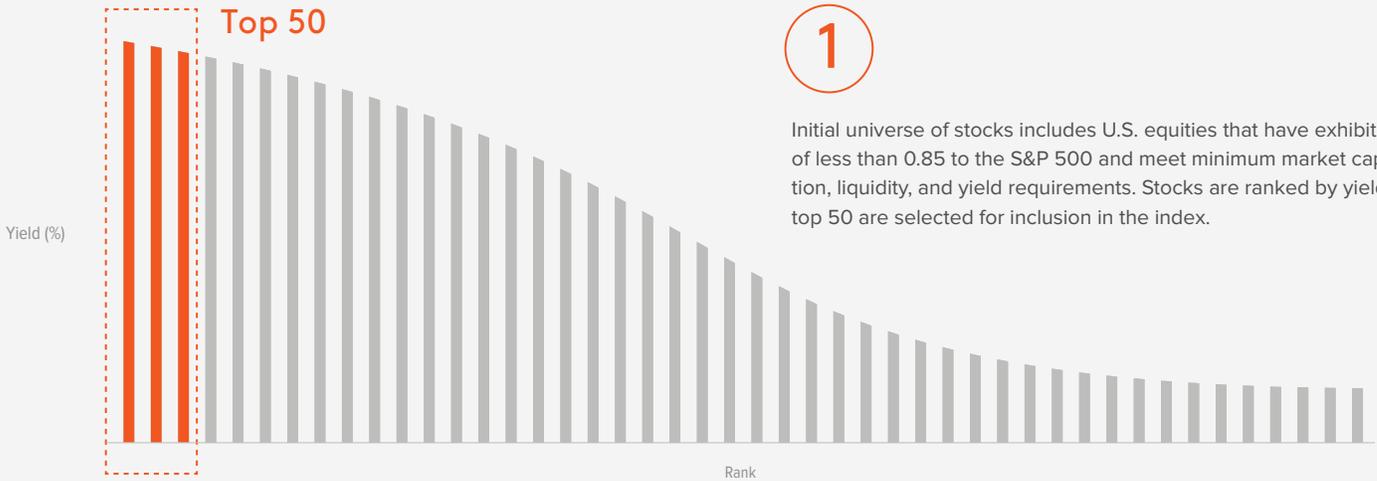

Traditionally, dividend-focused funds have categorized stocks as non-dividend payers, dividend payers, or high dividend payers. By segmenting stocks into just a few categories, 'high dividend' funds tend to own a broad slice of the dividend-paying market, resulting in yields that only marginally exceed the overall market.

SuperDividend accesses just the highest tier of dividend payers, resulting in yields that have historically exceeded other high dividend ETFs.

HOW IT WORKS

1

Initial universe of stocks includes U.S. equities that have exhibited a beta of less than 0.85 to the S&P 500 and meet minimum market capitalization, liquidity, and yield requirements. Stocks are ranked by yield and the top 50 are selected for inclusion in the index.

2

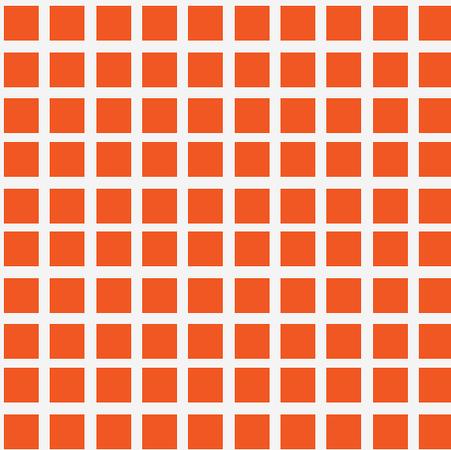

These 50 stocks are equally weighted to reduce the risk associated with owning any one security.

3

Once a quarter, the index components are screened for dividend cuts or negative outlook concerning the companies' dividend policy. Stocks removed from the index during these quarterly reviews are replaced with the next highest yielding stocks not currently in the index.

4

Components are rebalanced annually.

For full index methodology, please visit the index provider's website at www.indxx.com

Beta: Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index.

IDIVT: The INDX SuperDividend U.S. Low Volatility Index tracks the performance of 50 equally weighted common stocks, MLPs and REITs that rank among the highest dividend yielding equity securities in the U.S.

Investing involves risk, including the possible loss of principal. High yielding stocks are often speculative, high-risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund's performance. The potential benefits of investing in MLPs depend on them being treated as partnerships for federal income tax purposes. Further, if the MLP is deemed to be a corporation then its income would be subject to federal taxation at the entity level, reducing the amount of cash available for distributions to the Fund which could result in a reduction of the Fund's value. The risks associated with real estate investment trusts including interest rate risk which may cause certain REIT holdings to decline in value if interest rates increase. REITs are subject to general risks related to real estate including default risk and the possibility of decreasing property values.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Global X NAVs are calculated using prices as of 4:00 PM Eastern Time. The closing price is the Mid-Point between the Bid and Ask price as of the close of exchange. Closing price returns do not represent the returns you would receive if you traded shares at other times. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

Carefully consider the Fund's investment objectives, risks, and charges and expenses before investing. This and other information can be found in the Fund's summary or full prospectus, which may be obtained by visiting globalxfunds.com. Please read the prospectus carefully before investing.
