Global X E-commerce ETF

Ticker: EBIZ Exchange: NASDAQ

INVESTMENT OBJECTIVE

The Global X E-commerce ETF (“Fund”) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Solactive E-commerce Index (“Underlying Index”).

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares (“Shares”) of the Fund. You will also incur usual and customary brokerage commissions when buying and selling Shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees:	0.68%
Distribution and Service (12b-1) Fees:	None
Other Expenses: ¹	0.00%
Total Annual Fund Operating Expenses:	0.68%

¹ *Other Expenses are based on estimated amounts for the current fiscal year.*

Example: The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account customary brokerage commissions that you pay when purchasing or selling Shares of the Fund in the secondary market. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

One Year	Three Years
\$69	\$218

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. This is a new fund and does not yet have a portfolio turnover rate to disclose.

PRINCIPAL INVESTMENT STRATEGIES

The Fund invests at least 80% of its total assets in the securities of the Underlying Index. The Fund's 80% investment policy is non-fundamental and requires 60 days prior written notice to shareholders before it can be changed.

The Underlying Index is designed to provide exposure to exchange-listed companies that are positioned to benefit from the increased adoption of e-commerce as a distribution model, including but not limited to companies whose principal business is in operating e-commerce platforms, providing e-commerce software and services, and/or selling goods and services online (collectively, "E-commerce Companies"), as defined by Solactive AG, the provider of the Underlying Index ("Index Provider"). In constructing the Underlying Index, the Index Provider first applies a proprietary natural language processing algorithm to the eligible universe, which seeks to identify and rank companies with direct exposure to the e-commerce industry based on filings, disclosures and other public information (e.g. regulatory filings, earnings transcripts, etc.). Companies identified by the natural language processing algorithm, as of the selection date, are further reviewed by the Index Provider on the basis of revenue related to e-commerce activities. To be eligible for the Underlying Index, a company is considered by the Index Provider to be an E-commerce Company if the company generates at least 50% of its revenues from e-commerce activities, as determined by the Index Provider. E-commerce Companies are those companies that (i) operate e-commerce platforms that connect buyers and sellers of goods and services via online marketplaces, (ii) provide e-commerce software, analytics or services that facilitate the development and enhancement of e-commerce platforms, and/or (iii) primarily sell goods and services online and generate the majority of their overall revenue from online retail, as determined by the Index Provider.

To be a part of the eligible universe of the Underlying Index, certain minimum market capitalization and liquidity criteria, as defined by the Index Provider, must be met. As of October 1, 2018, companies must have a minimum market capitalization of \$200 million and a minimum average daily turnover for the last 6 months greater than or equal to \$2 million in order to be eligible for inclusion in the Underlying Index. As of October 1, 2018, companies listed in the following countries were eligible for inclusion in the Underlying Index: Australia, Austria, Belgium, Brazil, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, Spain, Sweden, Switzerland, South Korea, Taiwan, the United Kingdom, and the United States.

The Underlying Index is weighted according to a modified capitalization weighting methodology and is reconstituted and re-weighted semi-annually. Modified capitalization weighting seeks to weight constituents primarily based on market capitalization, but subject to caps on the weights of the individual securities. Generally speaking, this approach will limit the amount of concentration in the largest market capitalization companies and increase company-level diversification. The Underlying Index may include large-, mid- or small-capitalization companies, and components primarily include information technology and consumer discretionary companies. As of October 1, 2018, the Underlying Index had 35 constituents. The Fund's investment objective and Underlying Index may be changed without shareholder approval.

The Underlying Index is sponsored by the Index Provider, which is an organization that is independent of the Fund and Global X Management Company LLC, the investment adviser for the Fund ("Adviser"). The Index Provider determines the relative weightings of the securities in the Underlying Index and publishes information regarding the market value of the Underlying Index.

The Adviser uses a “passive” or indexing approach to try to achieve the Fund’s investment objective. Unlike many investment companies, the Fund does not try to outperform the Underlying Index and does not seek temporary defensive positions when markets decline or appear overvalued.

The Fund generally will use a replication strategy. A replication strategy is an indexing strategy that involves investing in the securities of the Underlying Index in approximately the same proportions as in the Underlying Index. However, the Fund may utilize a representative sampling strategy with respect to the Underlying Index when a replication strategy might be detrimental or disadvantageous to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of equity securities to replicate the Underlying Index, in instances in which a security in the Underlying Index becomes temporarily illiquid, unavailable or less liquid, or as a result of legal restrictions or limitations (such as tax diversification requirements) that apply to the Fund but not the Underlying Index.

The Adviser expects that, over time, the correlation between the Fund’s performance and that of the Underlying Index, before fees and expenses, will exceed 95%. A correlation percentage of 100% would indicate perfect correlation.

The Fund concentrates its investments (i.e., holds 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Underlying Index is concentrated. Accordingly, the Fund's assets will be concentrated in companies that provide exposure to e-commerce. As of October 1, 2018, the Underlying Index also had significant exposure to the consumer discretionary and information technology sectors.

SUMMARY OF PRINCIPAL RISKS

As with any investment, you could lose all or part of your investment in the Fund, and the Fund's performance could trail that of other investments. There is no guarantee that the Fund will achieve its investment objective. The Fund is subject to the principal risks noted below, any of which may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the **Additional Information About the Fund** section of this Prospectus and in the Statement of Additional Information ("SAI").

Asian Economic Risk: Investments in Asian markets involve risks not typically associated with investments in securities of issuers in more developed countries, which may negatively affect the value of your investment in the Fund. The countries in Asia present different economic and political conditions from those in Western markets, and less social, political and economic stability. Political instability could have an adverse effect on economic or social conditions in these economies and may result in outbreaks of civil unrest, terrorist attacks or threats or acts of war in the affected areas, any of which could materially and adversely affect the companies in which the Fund may invest.

Asset Class Risk: Securities in the Underlying Index or otherwise held in the Fund's portfolio may underperform in comparison to the general securities markets or other asset classes.

Asset Fluctuation Risk: Certain shareholders, including an Authorized Participant (as defined in the SAI), the Adviser or an affiliate of the Adviser, may own a substantial amount of the Fund's Shares. Additionally, from time to time an Authorized Participant, a third party investor, the Adviser, or an affiliate of the Adviser may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or to allow the Fund to achieve size or scale. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its Shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations, in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the NASDAQ (the "Exchange") and may, therefore, have a material upward or downward effect on the market price of the Shares.

Authorized Participant Concentration Risk: The Fund has a limited number of financial institutions that may act as Authorized Participants. Only Authorized Participants who have entered into agreements with the Fund's distributor may engage in creation or redemption transactions directly with the Fund. To the extent that those Authorized Participants exit the business or are unable to process creation and/or redemption orders, and no other Authorized Participant is able to step forward to create or redeem in either of those cases, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting from a securities exchange. Authorized Participant Concentration Risk may be heightened because the Fund invests in non-U.S. securities.

Concentration Risk: Because the Fund's investments are concentrated in the consumer discretionary sector, the Fund will be susceptible to loss due to adverse occurrences affecting this sector or industry. To the extent that the Underlying Index concentrates in the securities of issuers in a particular country, industry, market, asset class, or sector, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in a country, industry, market, asset class, or sector, the Fund faces more risks than if it were diversified broadly over numerous countries, industries, markets, asset classes, or sectors. Such risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand; competition for resources; adverse labor relations; political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in a particular country, industry, market, asset class, or sector. In addition, at times, such country, industry, market, asset class, or sector may be out of favor and underperform other similar categories or the market as a whole. For additional details on these risks, please see **Risks Related to Investing in the Consumer Discretionary Sector and Risks Related to Investing in the Information Technology Sector**.

Currency Risk: The Fund may invest in securities denominated in foreign currencies. Because the Fund's NAV is determined in U.S. dollars, the Fund's NAV could decline if the relevant foreign currencies depreciate against the U.S. dollar or if there are delays or limits on repatriation of such currency. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the Fund's NAV may change quickly and without warning, which could have a significant negative impact on the Fund.

Custody Risk: Less developed markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by local banks, agents and depositories.

Cyber Security Risk: Failures or breaches of the electronic systems of the Fund, the Adviser, and the Fund's other service providers, market makers, Authorized Participants or the issuers of securities in which the Fund invests have the ability to cause disruptions and negatively impact the Fund's business operations, potentially resulting in financial losses to the Fund and its shareholders. While the Fund has established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Furthermore, the Fund cannot control the cyber security plans and systems of the Fund's service providers, market makers, Authorized Participants or issuers of securities in which the Fund invests.

Emerging Markets Risk: The Fund is expected to invest in securities in emerging market countries. The Fund's investment in an emerging market country may be subject to a greater risk of loss than investments in developed markets. Securities markets of emerging market countries are less liquid, subject to greater price volatility, have smaller market capitalizations, have less government regulation, and are not subject to as extensive and frequent accounting, financial, and other reporting requirements as the securities markets of more developed countries. Because certain securities markets in the emerging market countries in which the Fund may invest are small in size, underdeveloped and are less regulated and less correlated to global economic cycles than those markets located in more developed countries, the securities markets in such countries are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations and uncertainty regarding the existence of trading markets.

Equity Securities Risk: Equity securities are subject to changes in value and their values may be more volatile than other asset classes, as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

European Economic Risk: Decreasing European imports, new trade regulations, changes in exchange rates, a recession in Europe, or a slowing of economic growth in this region could have an adverse impact on the securities in which the Fund invests.

Foreign Securities Risk: The Fund's investments in foreign securities can be riskier than U.S. securities investments. Investments in the securities of foreign issuers (including investments in American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs")) are subject to the risks associated with investing in those foreign markets, such as heightened risks of inflation or nationalization. The prices of foreign securities and the prices of U.S. securities have, at times, moved in opposite directions. In addition, securities of foreign issuers may lose value due to political, economic and geographic events affecting a foreign issuer or market. During periods of social, political or economic instability in a country or region, the value of a foreign security traded on U.S. exchanges could be affected by, among other things, increasing price volatility, illiquidity, or the closure of the primary market on which the security (or the security underlying the ADR or GDR) is traded. You may lose money due to political, economic, and geographic events affecting a foreign issuer or market.

Geographic Risk: A natural disaster could occur in a geographic region in which the Fund invests, which could affect the economy or particular business operations of companies in the specific geographic region, causing an adverse impact on the Fund's investments in the affected region or in a region economically tied to the affected region.

Index-Related Risk: There is no guarantee that the Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders.

International Closed Market Trading Risk: To the extent that the underlying securities held by the Fund trade on foreign exchanges that may be closed when the securities exchange on which the Fund's Shares trade is open, there are likely to be deviations between the current price of such an underlying security and the last quoted price for the underlying security (i.e., the Fund's quote from the closed foreign market). These deviations could result in premiums or discounts to the Fund's NAV that may be greater than those experienced by other exchange-traded funds ("ETFs").

Issuer Risk: Fund performance depends on the performance of individual companies in which the Fund invests. Changes to the financial condition of any of those companies may cause the value of their securities to decline.

Large-Capitalization Companies Risk: Large-capitalization companies may trail the returns of the overall stock market. Large capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

Listing Standards Risk: Under continuous listing standards adopted by the Fund's listing exchange, the Fund will be required to confirm on an ongoing basis that the components of the Underlying Index satisfy the applicable listing requirements. In the event that the Underlying Index does not comply with the applicable listing requirements, the Fund would be required to rectify such non-compliance by requesting that the Index Provider modify the Underlying Index, adopting a new underlying index, or obtaining relief from the SEC. Failure to rectify such non-compliance may result in the Fund being delisted by the listing exchange.

Management Risk: The Fund is subject to the risk that the Adviser's investment management strategy may cause the Fund to underperform the market or its relevant benchmark or adversely affect the ability of the Fund to achieve its investment objective.

Market Risk: Turbulence in the financial markets and reduced liquidity may negatively affect issuers, which could have an adverse effect on the Fund. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, or other government actors, which could include increasing interest rates, could cause increased volatility in financial markets and lead to higher levels of Fund redemptions, which could have a negative impact on the Fund. The Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns.

Market Trading Risk: Shares of the Fund are publicly traded on a national securities exchange which may subject shareholders to numerous market trading risks, including the potential lack of an active market for Shares, losses from trading in secondary markets, periods of high volatility and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to NAV.

Mid-Capitalization Companies Risk: Mid-capitalization companies may have greater price volatility, lower trading volume and less liquidity than large-capitalization companies. In addition, mid-capitalization companies may have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies.

Nationalization Risk: Investments in China may be subject to loss due to expropriation or nationalization of assets and property or the imposition of restrictions on foreign investments and repatriation of capital.

New Fund Risk: The Fund is a new fund, with no operating history, which may result in additional risks for investors in the Fund. There can be no assurance that the Fund will grow to or maintain an economically viable size, in which case the Board of Trustees may determine to liquidate the Fund. While shareholder interests will be the paramount consideration, the timing of any liquidation may not be favorable to certain individual shareholders. New funds are also subject to Asset Fluctuation Risk.

Non-Diversification Risk: The Fund is classified as a “non-diversified” investment company under the Investment Company Act of 1940 ("1940 Act"). As a result, the Fund is subject to the risk that it may be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund’s NAV and may make the Fund more volatile than more diversified funds.

Operational Risk: The Fund is exposed to operational risk arising from a number of factors, including but not limited to human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Passive Investment Risk: The Fund is not actively managed and the Adviser does not attempt to take defensive positions in declining markets. Unlike many investment companies, the Fund does not seek to outperform its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund’s return to be lower than if the Fund employed an active strategy.

Premium/Discount Risk: Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Reliance on Trading Partners Risk: The Fund invests in the Chinese economy, which is heavily dependent upon trading with key partners. Any reduction in this trading, including as a result of adverse economic conditions in a trading partner’s economy,

may cause an adverse impact on the Chinese economy in which the Fund invests. Through its portfolio companies' trading partners, the Fund is specifically exposed to **Asian Economic Risk** and **U.S. Economic Risk**.

Risk of Investing in Developed Countries: The Fund's investment in a developed country issuer may subject the Fund to regulatory, political, currency, security, economic and other risks associated with developed countries. Developed countries tend to represent a significant portion of the global economy and have generally experienced slower economic growth than some less developed countries. In addition, developed countries may be impacted by changes to the economic conditions of certain key trading partners, regulatory burdens, debt burdens and the price or availability of certain commodities.

Risks Related to Investing in China: Investment exposure to China subjects the Fund to risks specific to China. China may be subject to considerable degrees of economic, political and social instability. China is an emerging market and demonstrates significantly higher volatility, from time to time, in comparison to developed markets. Over the past 25 years, the Chinese government has undertaken reform of economic and market practices and expansion of the sphere for private ownership of property in China. However, Chinese markets generally continue to experience inefficiency, volatility and pricing anomalies resulting from governmental influence, a lack of publicly available information and/or political and social instability. Internal social unrest or confrontations with other neighboring countries, including military conflicts in response to such events, may also disrupt economic development in China and result in a greater risk of currency fluctuations, currency convertibility, interest rate fluctuations and higher rates of inflation. Export growth continues to be a major driver of China's rapid economic growth. Reduction in spending on Chinese products and services, institution of tariffs or other trade barriers, or a downturn in any of the economies of China's key trading partners may have an adverse impact on the Chinese economy. The 2016 presidential election in the U.S. may have increased the probability of new trade regulations and other protective trade measures being implemented in relation to China. While policy implications remain uncertain, new regulations or trade barriers could lead to a decrease in trade activity between China and the U.S., which could have an adverse impact on the Chinese economy. China has implemented a number of tax reforms in recent years, and may amend or revise its existing tax laws and/or procedures in the future, possibly with retroactive effect. Changes in applicable Chinese tax law could reduce the after-tax profits of the Fund, directly or indirectly, including by reducing the after-tax profits of companies in China in which the Fund invests. Uncertainties in Chinese tax rules could result in unexpected tax liabilities for the Fund.

Risks Related to Investing in the Consumer Discretionary Sector: The consumer discretionary sector may be affected by changes in domestic and international economies, exchange and interest rates, competition, consumers' disposable income and consumer preferences, social trends and marketing campaigns.

Risks Related to Investing in E-commerce Companies: E-commerce Companies typically face intense competition and are subject to fluctuating consumer demand. Many of these companies compete aggressively on price, potentially affecting their long run profitability. Due to the online nature of E-commerce Companies and their involvement in processing, storing and transmitting large amounts of data, these companies are particularly vulnerable to cyber security risk. This includes threats to operational software and hardware, as well as theft of personal and transaction records and other customer data. In the event of a cyberattack, E-commerce Companies could suffer serious adverse reputational and operational consequences, including liability and litigation.

Risks Related to Investing in the Information Technology Sector: Companies in the information technology sector are subject to rapid changes in technology product cycles; rapid product obsolescence; government regulation; and increased competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Information technology companies and companies that rely heavily on technology tend to be more volatile than the overall market, and are also heavily dependent on patent and intellectual property rights. In addition, information technology companies may have limited product lines, markets, financial resources or personnel.

Small-Capitalization Companies Risk: Compared to mid- and large-capitalization companies, small-capitalization companies may be less stable and more susceptible to adverse developments, and their securities may be more volatile and less liquid.

Tracking Error Risk: Tracking error is the divergence of the Fund's performance from that of the Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Underlying Index, pricing differences (including differences between a security's price at the local market close and the Fund's valuation of a security at the time of calculation of the Fund's NAV), differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Underlying Index does not. ETFs that track indices with significant weight in emerging markets issuers may experience higher tracking error other than other ETFs that do not track such indices.

Trading Halt Risk: An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

U.S. Economic Risk: Decreasing U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates, a recession in the United States or increases in foreclosures rates may have an adverse impact on the Fund.

Valuation Risk: The sales price the Fund could receive for a security may differ from the Fund's valuation of the security and may differ from the value used by the Underlying Index, particularly for securities that trade in low value or volatile markets or that are valued using a fair value methodology. The value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

PERFORMANCE INFORMATION

The Fund does not have a full calendar year of performance. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's returns and comparing the Fund's performance to the Underlying Index. The Fund's performance is not necessarily indicative of how the Fund will perform in the future.

FUND MANAGEMENT

Investment Adviser: Global X Management Company LLC.

Portfolio Managers: The professionals primarily responsible for the day-to-day management of the Fund are Chang Kim, CFA, James Ong, CFA, and Nam To (“Portfolio Managers”). Messrs. Kim, Ong, and To have been portfolio managers of the Fund since inception.

PURCHASE AND SALE OF FUND SHARES

Shares of the Fund are or will be listed and traded at market prices on a national securities exchange ("Exchange"). Shares may only be purchased and sold on the Exchange through a broker-dealer. The price of Shares is based on market price, and because ETF shares trade at market prices rather than at NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). Only “Authorized Participants” (as defined in the SAI) who have entered into agreements with the Fund’s distributor, SEI Investments Distribution Co. ("Distributor"), may engage in creation or redemption transactions directly with the Fund. The Fund will only issue or redeem Shares that have been aggregated into blocks of 50,000 Shares or multiples thereof ("Creation Units"). The Fund will issue or redeem Creation Units in return for a basket of cash and/or securities that the Fund specifies any day that the national securities exchange is open for business ("Business Day").

TAX INFORMATION

The Fund intends to make distributions that may be taxable to you as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement such as a 401(k) plan or an individual retirement account ("IRA"), in which case distributions from such tax-deferred arrangement may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer, sales persons or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND

This Prospectus contains information about investing in the Fund. Please read this Prospectus carefully before you make any investment decisions. Shares of the Fund are listed for trading on a national securities exchange. The market price for a Share of the Fund may be different from the Fund's most recent NAV. ETFs are funds that trade like other publicly-traded securities. The Fund is designed to track an index. Similar to shares of an index mutual fund, each Share of the Fund represents an ownership interest in an underlying portfolio of securities. Unlike shares of a mutual fund, which can be bought and redeemed from the issuing fund by all shareholders at a price based on NAV, Shares of the Fund may be purchased or redeemed directly from the

Fund at NAV solely by Authorized Participants and only in Creation Unit increments. Also unlike shares of a mutual fund, Shares of the Fund are listed on a national securities exchange and trade in the secondary market at market prices that change throughout the day. The Fund is designed to be used as part of broader asset allocation strategies. Accordingly, an investment in the Fund should not constitute a complete investment program. An index is a financial calculation, based on a grouping of financial instruments, and is not an investment product, while the Fund is an actual investment portfolio. The performance of the Fund and its Underlying Index may vary for a number of reasons, including transaction costs, non-U.S. currency valuations, asset valuations, corporate actions (such as mergers and spin-offs), timing variances and differences between the Fund's portfolio and the Underlying Index resulting from the Fund's legal restrictions (such as diversification requirements) that apply to the Fund but not to the Underlying Index.

The Fund invests at least 80% of its total assets in the securities of the Underlying Index. The Fund's 80% investment policy is non-fundamental and requires 60 days prior written notice to shareholders before it can be changed. The Adviser anticipates that, generally, the Fund will hold all of the securities that comprise its Underlying Index in proportion to their weightings in such Underlying Index. However, under various circumstances, it may not be possible or practicable to purchase all of those securities in those weightings. In these circumstances, the Fund may purchase a sample of securities in its Underlying Index. There also may be instances in which the Adviser may choose to underweight or overweight a security in the Fund's Underlying Index, purchase securities not in the Fund's Underlying Index that the Adviser believes are appropriate to substitute for certain securities in such Underlying Index or utilize various combinations of other available investment techniques in seeking to replicate, as closely as possible, before fees and expenses, the price and yield performance of the Fund's Underlying Index. The Fund may sell securities that are represented in its Underlying Index in anticipation of their removal from such Underlying Index or purchase securities not represented in its Index in anticipation of their addition to such Underlying Index. The Fund's investment objective and its Underlying Index may be changed without shareholder approval.

An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Adviser or any of its affiliates.

A FURTHER DISCUSSION OF PRINCIPAL RISKS

The Fund is subject to various risks, including the principal risks noted below, any of which may adversely affect the Fund's NAV, trading price, yield, total return and ability to meet its investment objective. You could lose all or part of your investment in the Fund, and the Fund could underperform other investments.

Asian Economic Risk

Certain Asian economies have experienced high inflation, high unemployment, currency devaluations and restrictions, and overextension of credit. Many Asian economies have experienced rapid growth and industrialization, and there is no assurance that this growth rate will be maintained. Export-driven Asian economies are highly sensitive to global economic growth. A recession or economic slowdown in the economies of major trading partners, such as the United States and Europe, could have a materially negative impact on export-driven Asian economies. In the past, certain Asian governments have implemented stimulus plans, low-rate monetary policies and currency devaluations in response to global recessionary pressures. There is no guarantee

that these policy responses will alleviate the impact of a global recession on these economies in the future. Economic events in any one Asian country may have a significant economic effect on the entire Asian region, as well as on major trading partners outside Asia. Any adverse event in the Asian markets may have a significant adverse effect on some or all of the economies of the countries in which the Fund invests. Many Asian countries are subject to political risk, including corruption and regional conflict with neighboring countries. In addition, many Asian countries are subject to social and labor risks associated with demands for improved political, economic and social conditions. These risks, among others, may adversely affect the value of the Fund's investments.

Asset Class Risk

The returns from the types of securities in which the Fund invests may under-perform returns from the various general securities markets or different asset classes. The stocks in the Underlying Index may under-perform fixed-income investments and stock market investments that track other markets, segments and sectors. Different types of securities tend to go through cycles of out-performance and under-performance in comparison to the general securities markets.

Asset Fluctuation Risk

Certain shareholders, including an Authorized Participant, the Adviser or an affiliate of the Adviser, may own a substantial amount of the Fund's Shares. Additionally, from time to time an Authorized Participant, a third party investor, the Adviser, or an affiliate of the Adviser may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or to allow the Fund to achieve size or scale. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its Shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations, in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the Exchange and may, therefore, have a material upward or downward effect on the market price of the Shares.

Authorized Participant Concentration Risk

The Fund has a limited number of financial institutions that may act as Authorized Participants. Only Authorized Participants who have entered into agreements with the Fund's distributor may engage in creation or redemption transactions directly with the Fund. To the extent that those Authorized Participants exit the business, or are unable to process creation and/or redemption orders, and no other Authorized Participant is able to step forward to create and redeem in either of those cases, Shares may trade like closed-end fund shares at a discount to NAV, and may possibly face trading halts and/or delisting from the Exchange.

Concentration Risk

In following its methodology, the Underlying Index may be concentrated to a significant degree in securities of issuers located in a single country, market, industry, group of industries, asset class, or sector. To the extent that the Underlying Index concentrates in the securities of issuers in such an area, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in a single country, market, industry, group of industries, asset class, or sector, the Fund faces more

risks than if it were diversified broadly over numerous such areas. Such risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand; competition for resources; adverse labor relations; political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in a country, market, industry, group of industries, asset class, or sector. In addition, at times, such country, market, industry, group of industries, asset class, or sector may be out of favor and underperform other such categories or the market as a whole.

Currency Risk

Foreign currencies are subject to risks, which include changes in the debt level and trade deficit of the country issuing the foreign currency; inflation rates of the United States and the country issuing the foreign currency; investors' expectations concerning inflation rates; interest rates of the United States and the country issuing the foreign currency; investors' expectations concerning interest rates; investment and trading activities of mutual funds, hedge funds and currency funds; and global or regional political, economic or financial events and situations.

In addition, a foreign currency in which the Fund invests may not maintain its long-term value in terms of purchasing power in the future. When the price of a foreign currency in which the Fund invests declines, it may have an adverse impact on the Fund. Foreign exchange rates are influenced by the factors identified above and may also be influenced by: changing supply and demand for a particular currency; monetary policies of governments (including exchange control programs, restrictions on local exchanges or markets and limitations on foreign investment in a country or on investment by residents of a country in other countries); changes in balances of payments and trade; trade restrictions; and currency devaluations and revaluations. Also, governments from time to time intervene in the currency markets, directly and by regulation, in order to influence prices directly. These events and actions are unpredictable. The resulting volatility in the USD/foreign currency exchange rate could materially and adversely affect the performance of the Fund.

Custody Risk

Custody risk refers to risks in the process of clearing and settling trades and in the holding of securities by local banks, agents and depositories. Low trading volumes and volatile prices in less developed markets make trades harder to complete and settle. Local agents are held only to the standard of care of the local markets. Governments or trade groups may compel local agents to hold securities in designated depositories that are subject to independent evaluation. Generally, the less developed a country's securities market, the greater the likelihood of custody problems occurring.

Cyber Security Risk

With the increased use of technologies such as the internet to conduct business, the Fund, Authorized Participants, service providers and the relevant listing exchange are susceptible to operational, information security and related "cyber" risks both directly and through their service providers. Similar types of cyber security risks are also present for issuers of securities in which the Fund invests, which could result in material adverse consequences for such issuers and may cause the Fund's investment in

such portfolio companies to lose value. Unlike many other types of risks faced by the Fund, these risks typically are not covered by insurance. In general, cyber incidents can result from deliberate attacks or unintentional events. Cyber incidents include, but are not limited to, gaining unauthorized access to digital systems (e.g., through “hacking” or malicious software coding) for purposes of misappropriating assets or sensitive information, corrupting data, or causing operational disruption. Cyber attacks may also be carried out in a manner that does not require gaining unauthorized access, such as causing denial-of-service attacks on websites (i.e., efforts to make network services unavailable to intended users). Cyber security failures by or breaches of the systems of the Adviser and the Fund’s distributor and other service providers (including, but not limited to, the Index Provider, fund accountants, custodians, transfer agents and administrators), market makers, Authorized Participants, or the issuers of securities in which the Fund invests, have the ability to cause disruptions and impact business operations, potentially resulting in: financial losses, interference with a Fund’s ability to calculate its NAV, disclosure of confidential trading information, impediments to trading, submission of erroneous trades or erroneous creation or redemption orders, the inability of the Fund or its service providers to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs. In addition, cyber attacks may render records of Fund assets and transactions, shareholder ownership of Fund Shares, and other data integral to the functioning of the Fund inaccessible or inaccurate or incomplete. Substantial costs may be incurred by the Fund in order to resolve or prevent cyber incidents in the future. While the Fund has established business continuity plans in the event of, and risk management systems to prevent, such cyber attacks, there are inherent limitations in such plans and systems, including the possibility that certain risks have not been identified and that prevention and remediation efforts will not be successful. Furthermore, the Fund cannot control the cyber security plans and systems put in place by service providers to the Fund, issuers in which a Fund invests, the Index Provider, market makers or Authorized Participants. The Fund and its shareholders could be negatively impacted as a result.

Emerging Markets Risk

Emerging markets risk is the risk that the securities markets of emerging market countries are less liquid, subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries, as has historically been the case.

The risks of foreign investment are heightened when the issuer is located in an emerging country. Emerging countries are generally located in the Asia and Pacific regions, the Middle East, Eastern Europe, Latin America, and Africa. The Fund’s purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of the Fund, the Adviser, its affiliates and their respective clients and other service providers. The Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging market countries is restricted or controlled to varying degrees, which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require government approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous

terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by the Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions, such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian, Latin American and other countries), the Fund may invest in such countries through other investment funds in such countries.

Many emerging market countries have experienced currency devaluations, substantial (and, in some cases, extremely high) rates of inflation, and economic recessions. These circumstances have had a negative effect on the economies and securities markets of those emerging market countries. Economies in emerging market countries generally are dependent upon commodity prices and international trade and, accordingly, have been, and may continue to be, affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. As a result, emerging market countries are particularly vulnerable to downturns of the world economy. The 2008-2009 global financial crisis tightened international credit supplies and weakened the global demand for their exports. As a result, certain of these economies faced significant economic difficulties, which caused some emerging market economies to fall into recession. Recovery from such conditions may be gradual and/or halting as weak economic conditions in developed markets may continue to suppress demand for exports from emerging market countries.

Many emerging market countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging market countries are authoritarian in nature or have been installed or removed as a result of military coups, while governments in other emerging market countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Many emerging market countries have experienced strained international relations due to border disputes, historical animosities or other defense concerns. These situations may cause uncertainty in the markets and may adversely affect the performance of these economies. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging market countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past, some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not occur in other emerging market countries, including China.

The Fund's investment in emerging market countries may also be subject to withholding or other taxes, which may be significant and may reduce the return to the Fund from an investment in such countries.

Settlement and clearance procedures in emerging market countries are frequently less developed and reliable than those in the United States and may involve the Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement, clearance or registration problems may make it more difficult for the Fund to value its portfolio securities and could cause the Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Fund has delivered or the Fund's inability to complete its contractual obligations because of theft or other reasons. In addition,

local agents and depositories are subject to local standards of care that may not be as rigorous as developed countries. Governments and other groups may also require local agents to hold securities in depositories that are not subject to independent verification. The less developed a country's securities market, the greater the risk to the Fund.

The creditworthiness of the local securities firms used by the Fund in emerging market countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The Fund's use of foreign currency management techniques in emerging market countries may be limited. Due to the limited market for these instruments in emerging market countries, all or a significant portion of the Fund's currency exposure in emerging market countries may not be covered by such instruments.

Rising interest rates, combined with widening credit spreads, could negatively impact the value of emerging market debt and increase funding costs for foreign issuers. In such a scenario, foreign issuers might not be able to service their debt obligations, the market for emerging market debt could suffer from reduced liquidity, and the Fund could lose money.

Certain issuers in emerging market countries may utilize share blocking schemes. Share blocking refers to a practice, in certain foreign markets, where voting rights related to an issuer's securities are predicated on these securities being blocked from trading at the custodian or sub-custodian level, for a period of time around a shareholder meeting. These restrictions have the effect of barring the purchase and sale of certain voting securities within a specified number of days before and, in certain instances, after a shareholder meeting where a vote of shareholders will be taken. Share blocking may prevent the Fund from buying or selling securities for a period of time. During the time that shares are blocked trades in such securities will not settle, the blocking period can last up to several weeks. The process for having a blocking restriction lifted can be quite onerous with the particular requirements varying widely by country. In addition, in certain countries, the block cannot be removed. As a result of the ramifications of voting ballots in markets that allow share blocking, the Adviser, on behalf of the Fund, reserves the right to abstain from voting proxies in those markets.

Equity Securities Risk

The Fund may invest in equity securities, which are subject to changes in value that may be attributable to market perception of a particular issuer, general stock market fluctuations that affect all issuers, or as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions. Investments in equity securities may be more volatile than investments in other asset classes.

European Economic Risk

The economies of Europe are highly dependent on each other, both as key trading partners and as, in many cases, as fellow members maintaining the euro. Decreasing European imports, new trade regulations, changes in exchange rates, a recession in Europe, or a slowing of economic growth in this region could have an adverse impact on the securities in which the Fund invests. Reduction in trading activity among European countries may cause an adverse impact on each nation's individual economies.

The Economic and Monetary Union of the European Union ("EU") requires compliance with restrictions on inflation rates, deficits, interest rates, debt levels and fiscal and monetary controls, each of which may significantly affect every country in Europe. Decreasing imports or exports, changes in governmental or EU regulations on trade, changes in the exchange rate of the euro, the default or threat of default by an EU member country or its sovereign debt, and recessions in an EU member country may have a significant adverse effect on the economies of EU member countries and their trading partners. The European financial markets previously experienced volatility and adverse trends due to concerns about rising government debt levels of several European countries, including Greece, Spain, Ireland, Italy and Portugal. These events adversely affected the exchange rate of the euro and may continue to significantly affect every country in Europe.

Responses to the financial problems by European governments, central banks and others, including austerity measures and reforms, may not work, may result in social unrest and may limit future growth and economic recovery or have other unintended consequences. Further defaults or restructurings by governments and other entities of their debt could have additional adverse effects on economies, financial markets and asset valuations around the world. In addition, one or more countries may abandon the euro, the common currency of the EU, and/or withdraw from the EU. The impact of these actions, especially if they occur in a disorderly fashion, is not clear but could be significant and far-reaching. Outside of the EU, Iceland also experienced adverse trends due to high debt levels and excessive lending. The British economy, along with the United States and certain other EU economies, experienced a significant economic slowdown during the recent financial crisis. Pursuant to the European Referendum Act 2015, a referendum on the United Kingdom's membership of the EU (the "UK's EU Referendum") was held on June 23, 2016 with the majority voting to leave the EU. Whilst the result of the UK's EU Referendum does not bind the UK Government or the UK Parliament to a particular course of action, it is currently expected that the UK Government will exercise its right under Article 50 of the Lisbon Treaty to leave the EU. The timing and the manner of the UK's withdrawal from the EU is currently unknown and may not become clear in the short-term. Whilst the medium- to long-term consequences of the decision to leave the EU remain uncertain, it is expected that there will be a short-term negative impact to the general economic conditions in the UK and business and consumer confidence in the UK, which may in turn have a negative impact elsewhere in the EU and more widely. This may be affected by the length of time it takes for the UK to leave the EU and the terms of any future arrangements the UK has with the remaining member states of the EU. Among other things, the UK's decision to leave the EU could lead to instability in the foreign exchange markets, including volatility in the value of the pound sterling or the euro.

An investment in Eastern European issuers may subject the Fund to legal, regulatory, political, currency, security and economic risks specific to Eastern Europe. Economies of certain Eastern European countries rely heavily on the export of commodities, including oil and gas, and certain metals. As a result, such economies will be impacted by international commodity prices and are particularly vulnerable to global demand for these products. Acts of terrorism in certain Eastern European countries may cause uncertainty in their financial markets and adversely affect the performance of the issuers to which the Fund has exposure. The securities markets in Eastern European countries are substantially smaller and inexperienced, with less government supervision and regulation of stock exchanges and are less liquid and more volatile than securities markets in the United States or Western European countries. Other risks related to investing in securities of Eastern European issuers include: the absence of legal structures governing private and foreign investments and private property; the possibility of the loss of all or a substantial portion of the Fund's assets invested in Eastern European issuers as a result of expropriation; certain national policies which may restrict the Fund's investment opportunities, including, without limitation, restrictions on investing in issuers or industries deemed sensitive to relevant national interests.

Foreign Securities Risk

The Fund's assets may be invested within the equity markets of countries outside of the United States. These markets are subject to special risks associated with foreign investment, including, but not limited to: lower levels of liquidity and market efficiency; greater securities price volatility; exchange rate fluctuations and exchange controls; less availability of public information about issuers; limitations on foreign ownership of securities; imposition of withholding or other taxes; imposition of restrictions on the expatriation of the assets of the Fund; higher transaction and custody costs and delays in settlement procedures; difficulties in enforcing contractual obligations; lower levels of regulation of the securities market; and weaker accounting, disclosure and reporting requirements. Shareholder rights under the laws of some foreign countries may not be as favorable as U.S. laws. Thus, a shareholder may have more difficulty in asserting its rights or enforcing a judgment against a foreign company than a shareholder of a comparable U.S. company. Investment of more than 25% of the Fund's total assets in securities located in one country or region will subject the Fund to increased country or region risk with respect to that country or region.

Geographic Risk

Geographic risk is the risk that the Fund's assets may be concentrated in countries located in the same geographic region. This concentration will subject the Fund to risks associated with that particular region, or a region economically tied to that particular region, such as a natural disaster.

Index-Related Risk

There is no guarantee that the Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders.

International Closed Market Trading Risk

To the extent that the underlying securities held by the Fund trade on foreign exchanges that may be closed when the securities exchange on which the Fund's Shares trade is open, there are likely to be deviations between the current price of such an underlying security and the last quoted price for the underlying security (i.e., the Fund's quote from the closed foreign market). These deviations could result in premiums or discounts to the Fund's NAV that may be greater than those experienced by other ETFs.

Issuer Risk

Issuer risk is the risk that any of the individual companies in which the Fund invests in may perform badly, causing the value of its securities to decline. Poor performance may be caused by poor management decisions, competitive pressures, changes in technology, disruptions in supply, labor problems or shortages, corporate restructurings, fraudulent disclosures or other factors. Issuers may, in times of distress or on their own discretion, decide to reduce or eliminate dividends, which would also cause their stock prices to decline.

Large-Capitalization Companies Risk

Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

Listing Standards Risk

Under continuous listing standards adopted by the Fund's listing exchange, the Fund will be required to confirm on an ongoing basis that the components of the Underlying Index satisfy the applicable listing requirements. In the event that the Underlying Index does not comply with the applicable listing requirements, the Fund would be required to rectify such non-compliance by requesting that the Index Provider modify the Underlying Index, adopting a new underlying index, or obtaining relief from the SEC. Failure to rectify such non-compliance may result in the Fund being delisted by the listing exchange.

Management Risk

The Fund may not fully replicate its Underlying Index and may hold securities not included in its Underlying Index. Therefore, the Fund is subject to management risk. That is, the Adviser's investment strategy, the implementation of which is subject to a number of constraints, may cause the Fund to underperform the market or its relevant benchmark or adversely affect the ability of the Fund to achieve its investment objective. The ability of the Adviser to successfully implement the Fund's investment strategies will influence the Fund's performance significantly.

Market Risk

Market risk is the risk that the value of the securities in which the Fund invests may go up or down in response to the prospects of individual issuers and/or general economic conditions. Turbulence in the financial markets and reduced market liquidity may negatively affect issuers, which could have an adverse effect on the Fund. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, or other government actors, which could include increasing interest rates, could cause increased volatility in financial markets and lead to higher levels of Fund redemptions, which could have a negative impact on the Fund. The Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns.

Market Trading Risks

Absence of Active Market

Although Shares of the Fund are or will be listed for trading on a U.S. exchange and may be listed on certain foreign exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained.

Risks of Secondary Listings

The Fund's Shares may be listed or traded on U.S. and non-U.S. exchanges other than the U.S. exchange where the Fund's primary listing is maintained. There can be no assurance that the Fund's Shares will continue to trade on any such exchange or in any market or that the Fund's Shares will continue to meet the requirements for listing or trading on any exchange or in any market. The Fund's Shares may be less actively traded in certain markets than others, and investors are subject to the execution and settlement risks and market standards of the market where they or their broker direct their trades for execution. Certain information available to investors who trade Shares on a U.S. exchange during regular U.S. market hours may not be available to investors who trade in other markets, which may result in secondary market prices in such markets being less efficient.

Secondary Market Trading Risk

Shares of the Fund may trade in the secondary market on days when the Fund does not accept orders to purchase or redeem Shares. On such days, Shares may trade in the secondary market with more significant premiums or discounts than might be experienced on days when the Fund accepts purchase and redemption orders.

Secondary market trading in Fund Shares may be halted by a stock exchange because of market conditions or other reasons. In addition, trading in Fund Shares on a stock exchange or in any market may be subject to trading halts caused by extraordinary market volatility pursuant to "circuit breaker" rules on the stock exchange or market. There can be no assurance that the requirements necessary to maintain the listing or trading of Fund Shares will continue to be met or will remain unchanged.

Shares of the Fund May Trade at Prices Other Than NAV

Shares of the Fund may trade at, above or below NAV. The per share NAV of the Fund will fluctuate with changes in the market value of the Fund's holdings. The trading prices of Shares will fluctuate in accordance with changes in the Fund's NAV as well as market supply and demand. The trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. Any of these factors may lead to the Fund's Shares trading at a premium or discount to NAV. While the creation/redemption feature is designed to make it likely that Shares normally will trade close to the Fund's NAV, market prices are not expected to correlate exactly with the Fund's NAV due to timing reasons as well as market supply and demand factors. In addition, disruptions to creations and redemptions or the existence of extreme market volatility may result in trading prices that differ significantly from NAV. If a shareholder purchases at a time when the market price is at a premium to the NAV or sells at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Since foreign exchanges may be open on days when the Fund does not price Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell Shares.

Costs of Buying or Selling Fund Shares

Buying or selling Fund Shares involves two types of costs that apply to all securities transactions. When buying or selling Shares of the Fund through a broker, you will likely incur a brokerage commission or other charges imposed by brokers as determined by that broker. In addition, you may incur the cost of the "spread" - that is, the difference between what professional investors are willing to pay for Fund Shares (the "bid" price) and the market price at which they are willing to sell Fund Shares (the "ask" price). Because of the costs inherent in buying or selling Fund Shares, frequent trading may detract significantly from investment results and an investment in Fund Shares may not be advisable for investors who anticipate regularly making small investments.

Mid-Capitalization Companies Risk

Mid-capitalization companies may have greater price volatility, lower trading volume and less liquidity than large-capitalization companies. In addition, mid-capitalization companies may have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies.

New Fund Risk

The Fund is a new fund, with no operating history, which may result in additional risks for investors in the Fund. There can be no assurance that the Fund will grow to or maintain an economically viable size, in which case the Board of Trustees may determine to liquidate the Fund. While shareholder interests will be the paramount consideration, the timing of any liquidation may not be favorable to certain individual shareholders. From time to time, an authorized participant, a third party investor, the Adviser or another affiliate of the Adviser or the Fund may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or for the Fund to achieve size or scale. There can be no assurance that any such entity would not redeem its investment or that the size of the Fund would be maintained at such levels which could negatively impact the Fund.

Non-Diversification Risk

The Fund is classified as a "non-diversified" investment company under the 1940 Act. This means that the Fund may invest most of its assets in securities issued by or representing a small number of companies. As a result, the Fund may be more susceptible to the risks associated with these particular companies, or to a single economic, political or regulatory occurrence affecting these companies.

Operational Risk

The Fund is exposed to operational risk arising from a number of factors, including but not limited to human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls

and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Passive Investment Risk

The Fund is not actively managed and may be affected by a general decline in market segments relating to the respective Underlying Index. The Fund invests in securities included in, or representative of, the Underlying Index regardless of their investment merits. The Adviser does not attempt to take defensive positions in declining markets beyond the mechanics built into the Underlying Index. Unlike many investment companies, the Fund does not seek to outperform the Underlying Index. Therefore, the Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund's return to be lower than if the Fund employed an active strategy.

Premium/Discount Risk

Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Reliance on Trading Partners Risk

The Fund may invest in economies that are heavily dependent upon trading with key partners. Any reduction in this trading, institution of tariffs or other trade barriers or a slowdown in the economies of any of its key trading partners may cause an adverse impact on the economies of the markets in which the Fund invests.

Risk of Investing in Developed Countries

Investment in developed country issuers may subject the Fund to regulatory, political, currency, security, and economic risk specific to developed countries. Developed countries generally tend to rely on services sectors (e.g., the financial services sector) as the primary means of economic growth. A prolonged slowdown in, among others, services sectors is likely to have a negative impact on economies of certain developed countries. Developed countries experienced a significant economic slowdown during the recent financial crisis. In the past, certain developed countries have been targets of terrorism. Acts of terrorism in developed countries or against their interests abroad may cause uncertainty in the financial markets and adversely affect the performance of the issuers to which the Fund has exposure. Heavy regulation of, among others, labor and product markets may have an adverse effect on certain issuers. Such regulations may negatively affect economic growth or cause prolonged periods of recession. Many developed countries are heavily indebted and face rising healthcare and retirement expenses. In addition, price fluctuations of certain commodities and regulations impacting the import of commodities may negatively affect developed country economies.

Risks Related to Investing in China

The Chinese economy is subject to a considerable degree of economic, political and social instability.

Political and Social Risk

The Chinese government is authoritarian and has periodically used force to suppress civil dissent. Disparities of wealth and the pace of economic liberalization may lead to social turmoil, violence and labor unrest. In addition, China continues to experience disagreements related to integration with Hong Kong and religious and nationalist disputes in Tibet and Xinjiang. Unanticipated political or social developments may result in sudden and significant investment losses.

Heavy Government Control and Regulations

The Chinese government has implemented significant economic reforms in order to liberalize trade policy, promote foreign investment in the economy, reduce government control of the economy and develop market mechanisms. There can be no assurance these reforms will continue or that they will be effective. Despite recent reform and privatizations, heavy regulation of investment and industry is still pervasive and the Chinese government may restrict foreign ownership of Chinese corporations and repatriation of assets.

Economic Risk

The Chinese economy has grown rapidly during the past several years and there is no assurance that this growth rate will be maintained. China may experience substantial rates of inflation or economic recessions, causing a negative effect on the economy and securities market. Delays in enterprise restructuring, slow development of well-functioning financial markets and widespread corruption have also hindered performance of the Chinese economy and China continues to receive substantial pressure from trading partners to liberalize official currency exchange rates.

If any of China's primary trading partners, such as the United States, the European Union, Japan and South Korea, were to experience adverse economic conditions, the demand for Chinese exports could be reduced and this would adversely impact the Chinese economy. The performance of the Chinese economy may differ favorably or unfavorably from the U.S. economy in such respects as growth of gross domestic product, rate of inflation, currency depreciation, capital reinvestment, resource self-sufficiency and balance of payments position. The 2016 presidential election in the U.S. may have increased the probability of new trade regulations and other protective trade measures being implemented in relation to China. While policy implications remain uncertain, new regulations or trade barriers could lead to a decrease in trade activity between China and the United States, which could have an adverse impact on the Chinese economy.

Expropriation Risk

The Chinese government maintains a major role in economic policy making and investing in China involves risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested.

Tax Risk

China has implemented a number of tax reforms in recent years, and may amend or revise its existing tax laws and/or procedures in the future, possibly with retroactive effect. Changes in applicable Chinese tax law could reduce the after-tax profits of the Fund, directly or indirectly, including by reducing the after-tax profits of companies in China in which the Fund invests. Uncertainties in Chinese tax rules could result in unexpected tax liabilities for the Fund.

Hong Kong Political Risk

Hong Kong reverted to Chinese sovereignty on July 1, 1997 as a Special Administrative Region ("SAR") of the People's Republic of China under the principle of "one country, two systems." Although China is obligated to maintain the current capitalist economic and social system of Hong Kong through June 30, 2047, the continuation of economic and social freedoms enjoyed in Hong Kong is dependent on the government of China. Any attempt by China to tighten its control over Hong Kong's political, economic, legal or social policies may result in an adverse effect on Hong Kong's markets. In addition, the Hong Kong dollar trades at a fixed exchange rate in relation to (or, is "pegged" to) the U.S. dollar, which has contributed to the growth and stability of the Hong Kong economy. However, it is uncertain how long the currency peg will continue or what effect the establishment of an alternative exchange rate system would have on the Hong Kong economy. Because the Fund's NAV is denominated in U.S. dollars, the establishment of an alternative exchange rate system could result in a decline in the Fund's NAV.

Risks Related to Investing in the Consumer Discretionary Sector

The success of consumer product manufacturers and retailers is tied closely to the performance of the overall domestic and international economy, interest rates, competition and consumer confidence. Success depends heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes can also affect the demand for, and success of, consumer products and services in the marketplace.

Risks Related to Investing in E-commerce Companies

E-commerce Companies typically face intense competition and are subject to fluctuating consumer demand. Many of these companies compete aggressively on price, potentially affecting their long run profitability. Due to the online nature of E-commerce Companies and their involvement in processing, storing and transmitting large amounts of data, these companies are particularly vulnerable to cyber security risk. This includes threats to operational software and hardware, as well as theft of personal and transaction records and other customer data. In the event of a cyberattack, E-commerce Companies could suffer serious adverse reputational and operational consequences, including liability and litigation.

Risks Related to Investing in the Information Technology Sector

Market or economic factors impacting information technology companies and companies that rely heavily on technology advances could have a major effect on the value of the Fund's investments. The value of stocks of information technology

companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and increased competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Information technology companies and companies that rely heavily on technology, especially those of smaller, less seasoned companies, tend to be more volatile than the overall market. These companies also are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability. Additionally, companies in the information technology sector may face dramatic and often unpredictable changes in growth rates and competition for the services of qualified personnel.

Small-Capitalization Companies Risk

The Fund may invest a significant percentage of its assets in small-capitalization companies. If the Fund does so, it may be subject to certain risks associated with small-capitalization companies. These companies often have greater price volatility, lower trading volume and less liquidity than larger, more established companies. In addition, these companies are often subject to less analyst coverage and may be in early and less predictable periods of their corporate existences. These companies tend to have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than larger companies.

Tracking Error Risk

Tracking error is the divergence of the Fund's performance from that of the Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Underlying Index, pricing differences (including differences between a security's price at the local market close and the Fund's valuation of a security at the time of calculation of the Fund's NAV), differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Underlying Index does not. ETFs that track indices with significant weight in emerging markets issuers may experience higher tracking error other than other ETFs that do not track such indices.

Trading Halt Risk

An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

U.S. Economic Risk

The United States is a significant trading partner of or foreign investor in certain countries in which the Fund invests and the economies of these countries may be particularly affected by changes in the U.S. economy. Decreasing U.S. imports, new trade

regulations, changes in the U.S. dollar exchange rate, a recession in the United States or increases in foreclosures rates may have a material adverse effect on economies of the countries in which the Fund invests.

Valuation Risk

The sales price the Fund could receive for a security may differ from the Fund's valuation of the security and may differ from the value used by the Underlying Index, particularly for securities that trade in low value or volatile markets or that are valued using a fair value methodology. Because non-U.S. exchanges may be open on days when the Fund does not price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

A FURTHER DISCUSSION OF OTHER RISKS

The Fund may also be subject to certain other risks associated with its investments and investment strategies.

Leverage Risk

Under the 1940 Act, the Fund is permitted to borrow from a bank up to 33 1/3% of its net assets for short term or emergency purposes. The Fund may borrow money at fiscal quarter end to maintain the required level of diversification to qualify as a regulated investment company ("RIC") for purposes of the Internal Revenue Code of 1986, as amended (the "Code"). As a result, the Fund may be exposed to the risks of leverage, which may be considered a speculative investment technique. Leverage magnifies the potential for gain and loss on amounts invested and therefore increase the risks associated with investing in the Fund. If the value of the Fund's assets increases, then leveraging would cause the Fund's NAV to increase more sharply than it would have had the Fund not leveraged. Conversely, if the value of the Fund's assets decreases, leveraging would cause the Fund's NAV to decline more sharply than it otherwise would have had the Fund not leveraged. The Fund may incur additional expenses in connection with borrowings.

Qualification as a Regulated Investment Company Risk

The Fund must meet a number of diversification requirements to qualify as a RIC under Section 851 of the Code and, if qualified, to continue to qualify. If the Fund experiences difficulty in meeting those requirements for any fiscal quarter, it might enter into borrowings in order to increase the portion of the Fund's total assets represented by cash, cash items, and U.S. government securities shortly thereafter and, as of the close of the following fiscal quarter, to attempt to meet the requirements. However, the Fund may incur additional expenses in connection with any such borrowings, and increased investments by the Fund in cash, cash items, and U.S. government securities (whether the Fund makes such investments from borrowings) are likely to reduce the Fund's return to investors.

PORTFOLIO HOLDINGS INFORMATION

A description of the policies and procedures of Global X Funds® (the “Trust”) with respect to the disclosure of the Fund’s portfolio securities is available in the Fund’s Statement of Additional Information (“SAI”). The top holdings of the Fund can be found at www.globalxfunds.com and Fund Fact sheets provide information regarding the Fund’s top holdings and may be requested by calling 1-888-GX-Fund-1 (1-888-493-8631).

FUND MANAGEMENT

Investment Adviser

Global X Management Company LLC (the "Adviser") serves as the investment adviser and the administrator for the Fund. Subject to the supervision of the Board of Trustees, the Adviser is responsible for managing the investment activities of the Fund and the Fund’s business affairs and other administrative matters. The Adviser has been a registered investment adviser since 2008. The Adviser is a Delaware limited liability company with its principal offices located at 600 Lexington Avenue, 20th Floor, New York, New York 10022. As of October 1, 2018, the Adviser provided investment advisory services for assets of approximately \$9.8 billion.

Pursuant to a Supervision and Administration Agreement and subject to the general supervision of the Board of Trustees, the Adviser provides or causes to be furnished, all supervisory, administrative and other services reasonably necessary for the operation of the Fund and also bears the costs of various third-party services required by the Fund, including audit, certain custody, portfolio accounting, legal, transfer agency and printing costs. The Supervision and Administration Agreement also requires the Adviser to provide investment advisory services to the Fund pursuant to an Investment Advisory Agreement.

The Fund pays the Adviser a fee (“Management Fee”) in return for providing investment advisory, supervisory and administrative services under an all-in fee structure. The monthly Management Fee payable to the Adviser by the Fund is at an annual rate (stated as a percentage of the average daily net assets) of 0.68%.

The Adviser or its affiliates may pay compensation out of profits derived from the Adviser’s management fee or other resources and not as an additional charge to the Fund, to certain financial institutions (which may include banks, securities dealers and other industry professionals) for the sale and/or distribution of Fund shares or the retention and/or servicing of fund investors and Fund Shares (“revenue sharing”). These payments are in addition to any other fees described in the fee table or elsewhere in the prospectus or SAI. Examples of “revenue sharing” payments include, but are not limited to, payments to financial institutions for “shelf space” or access to a third party platform or fund offering list or other marketing programs, including, but not limited to, inclusion of the Fund on preferred or recommended sales lists, mutual fund “supermarket” platforms and other formal sales programs; granting the Adviser access to the financial institution’s sales force; granting the Adviser access to the financial institution’s conferences and meetings; assistance in training and educating the financial institution’s personnel; and obtaining other forms of marketing support. The level of revenue sharing payments made to financial institutions may be a fixed fee or based upon one or more of the following factors: gross sales, current assets and/or number of accounts of the Fund attributable to the financial institution, or other factors as agreed to by the Adviser and the financial institution or any combination thereof. The

amount of these revenue sharing payments is determined at the discretion of the Adviser from time to time, may be substantial, and may be different for different financial institutions depending upon the services provided by the financial institution. Such payments may provide an incentive for the financial institution to make Shares of the Fund available to its customers and may allow the fund greater access to the financial institution's customers.

Approval of Advisory Agreement

A discussion regarding the basis for the Board of Trustees' approval of the Supervision and Administration Agreement and the related Investment Advisory Agreement for the Fund will be available in the Fund's first Semi-Annual Report or Annual Report to shareholders for the period ended April 30 or October 31, respectively.

Portfolio Management

The Portfolio Managers who are currently responsible for the day-to-day management of the Fund are Chang Kim, James Ong, and Nam To.

Chang Kim: Chang Kim, CFA, joined the Adviser in September, 2009. He currently holds the position of Senior Vice President with the Adviser. Mr. Kim received his Bachelor of Arts from Yale University in 2009.

James Ong: James Ong, CFA, joined the Adviser in July 2014 and was promoted to Associate Vice President in February 2017. Previously, Mr. Ong served for two years as an investment banker in the Media & Telecom group at Jefferies. Mr. Ong received his Bachelor in Economics from Harvard University in 2012.

Nam To: Nam To joined the Adviser in July 2017 as a Portfolio Management Analyst. Previously, Mr. To was a Global Economics Research Analyst at Bunge Limited from 2014 through 2017 and an Advisory and Investment Analyst at Horizon Capital Group from June 2013 through August 2013. Mr. To received his Bachelor of Arts in Philosophy and Economics from Cornell University in 2014.

The SAI provides additional information about the Portfolio Managers' compensation structure, other accounts managed by the Portfolio Managers, and the Portfolio Managers' ownership of Shares of the Fund.

DISTRIBUTOR

SEI Investments Distribution Co. ("Distributor") distributes Creation Units for the Fund on an agency basis. The Distributor does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Fund or the securities that are purchased or sold by the Fund. The Distributor's principal address is One Freedom Valley Drive, Oaks, PA 19456. The Distributor is not affiliated with the Adviser.

BUYING AND SELLING FUND SHARES

Shares of the Fund trade on the national securities exchange and in the secondary market during the trading day. Shares can be bought and sold throughout the trading day like other shares of publicly-traded securities. There is no minimum investment for purchases made on the national securities exchanges. When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges. In addition, you will also incur the cost of the “spread,” which is the difference between what professional investors are willing to pay for Shares (the “bid” price) and the price at which they are willing to sell Shares (the “ask” price). The commission is frequently a fixed amount and may be a significant proportional cost for investors seeking to buy or sell small amounts of Shares. The spread with respect to Shares varies over time based on the Fund’s trading volume and market liquidity, and is generally lower if the Fund has a lot of trading volume and market liquidity and higher if the Fund has little trading volume and market liquidity. Because of the costs of buying and selling Shares, frequent trading may reduce investment return.

Shares of the Fund may be acquired or redeemed directly from the Fund only by Authorized Participants (as defined in the SAI) and only in Creation Units or multiples thereof, as discussed in the "Creations and Redemptions" section in the SAI. Under normal circumstances, the Fund will pay out redemption proceeds to a redeeming Authorized Participant within two days after the Authorized Participant’s redemption request is received, in accordance with the process set forth in the Fund’s SAI and in the agreement between the Authorized Participant and the Fund’s distributor. However, the Fund reserves the right, including under stressed market conditions, to take up to seven days after the receipt of a redemption request to pay an Authorized Participant, all as permitted by the 1940 Act. The Fund anticipates regularly meeting redemption requests primarily through cash redemptions. Cash used for redemptions will be raised from the sale of portfolio assets or may come from existing holdings of cash or cash equivalents.

Shares generally trade in the secondary market in amounts less than a Creation Unit. Shares of the Fund trade under the trading symbols listed for the Fund in the Fund Summary section of the Prospectus.

The Fund is listed on a national securities exchange, which is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

Book Entry

Shares of the Fund are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares and is recognized as the owner of all Shares for all purposes. Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants include DTC, securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any rights as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any securities that you hold in book entry or “street name” form.

FREQUENT TRADING

Unlike frequent trading of shares of a traditional open-end mutual fund (i.e., not exchange-traded shares), frequent trading of Shares on the secondary market does not disrupt portfolio management, increase the Fund's trading costs, lead to realization of capital gains, or otherwise harm Fund shareholders because these trades do not involve the Fund directly. A few institutional investors are authorized to purchase and redeem the Fund's Shares directly with the Fund. When these trades are effected in-kind (i.e., for securities, and not for cash), they do not cause any of the harmful effects (noted above) that may result from frequent cash trades. Moreover, the Fund imposes transaction fees on in-kind purchases and redemptions of the Fund intended to cover the custodial and other costs incurred by the Fund in effecting in-kind trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that the Fund's trading costs increase in those circumstances, although transaction fees are subject to certain limits and therefore may not cover all related costs incurred by the Fund. For these reasons, the Board of Trustees has determined that it is not necessary to adopt policies and procedures to detect and deter frequent trading and market-timing in Shares of the Funds.

DISTRIBUTION AND SERVICE PLAN

The Board of Trustees of the Trust has adopted a Distribution and Services Plan ("Plan") pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, the Fund is authorized to pay distribution fees in connection with the sale and distribution of its Shares and pay service fees in connection with the provision of ongoing services to shareholders of each class and the maintenance of shareholder accounts in an amount up to 0.25% of its average daily net assets each year.

No Rule 12b-1 fees are currently paid by the Fund, and there are no current plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because these fees are paid out of the Fund's assets on an ongoing basis, these fees will increase the cost of your investment in the Fund. By purchasing Shares subject to distribution fees and service fees, you may pay more over time than you would by purchasing Shares with other types of sales charge arrangements. Long-term shareholders may pay more than the economic equivalent of the maximum front-end sales charge permitted by the rules of FINRA. The net income attributable to Shares will be reduced by the amount of distribution fees and service fees and other expenses of the Fund.

DIVIDENDS AND DISTRIBUTIONS

Dividends from net investment income, including any net foreign currency gains, generally are declared and paid at least annually and any net realized security gains are distributed at least annually. In order to improve tracking error or comply with the distribution requirements of the Internal Revenue Code of 1986, as amended (the "Code"), dividends may be declared and paid more frequently than annually for the Fund.

Dividends and other distributions on Shares are distributed on a pro rata basis to beneficial owners of such Shares. Dividend payments are made through DTC participants to beneficial owners then of record with proceeds received from the Fund.

Dividends and security gain distributions are distributed in U.S. dollars and cannot be automatically reinvested in additional Shares.

No dividend reinvestment service is provided by the Trust. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of the Fund for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole Shares purchased in the secondary market.

TAXES

The following is a summary of certain tax considerations that may be relevant to an investor in the Fund. Except where otherwise indicated, the discussion relates to investors who are individual United States citizens or residents and is based on current tax law. You should consult your tax advisor for further information regarding federal, state, local and/or foreign tax consequences relevant to your specific situation.

Distributions. The Fund receives income and gains on its investments. The income, less expenses incurred in the operation of the Fund, constitutes the Fund's net investment income from which dividends may be paid to you. The Fund intends to qualify as a regulated investment company ("RIC") under the Internal Revenue Code of 1986, as amended (the "Code") for federal tax purposes and to distribute to shareholders substantially all of its net investment income and net capital gain each year. Except as otherwise noted below, you will generally be subject to federal income tax on the Fund's distributions to you. For federal income tax purposes, Fund distributions attributable to short-term capital gains and net investment income are taxable to you as ordinary income. Distributions attributable to net capital gains (the excess of net long-term capital gains over net short-term capital losses) of the Fund generally are taxable to you as long-term capital gains. This is true no matter how long you own your Shares or whether you take distributions in cash or additional Shares. The maximum long-term capital gain rate applicable to individuals is 20%.

Distributions of "qualifying dividends" will also generally be taxable to you at long-term capital gain rates as long as certain requirements are met. In general, if 95% or more of the gross income of the Fund (other than net capital gain) consists of dividends received from domestic corporations or "qualified" foreign corporations ("qualifying dividends"), then all distributions received by individual shareholders of the Fund will be treated as qualifying dividends. But if less than 95% of the gross income of the Fund (other than net capital gain) consists of qualifying dividends, then distributions received by individual shareholders of the Fund will be qualifying dividends only to the extent they are derived from qualifying dividends earned by the Fund. For the lower rates to apply, you must have owned your Shares for at least 61 days during the 121-day period beginning on the date that is 60 days before the Fund's ex-dividend date (and the Fund will need to have met a similar holding period requirement with respect to the Shares of the corporation paying the qualifying dividend). The amount of the Fund's distributions that qualify for this favorable treatment may be reduced as a result of such Fund's securities lending activities (if any), a high portfolio turnover rate or investments in debt securities or "non-qualified" foreign corporations. In addition, whether distributions received from

foreign corporations are qualifying dividends will depend on several factors including the country of residence of the corporation making the distribution. Accordingly, distributions from many of the Fund's holdings may not be qualifying dividends.

A portion of distributions paid by the Fund to shareholders that are corporations may also qualify for the dividends-received deduction for corporations, subject to certain holding period requirements and debt financing limitations. The amount of the dividends qualifying for this deduction may, however, be reduced as a result of the Fund's securities lending activities, by a high portfolio turnover rate or by investments in debt securities or foreign corporations. All dividends (including the deducted portion) must be included in a corporation's alternative minimum taxable income calculations.

Distributions from the Fund will generally be taxable to you in the year in which they are paid, with one exception. Dividends and distributions declared by the Fund in October, November or December and paid in January of the following year are taxed as though they were paid on December 31.

You should note that if you buy Shares of the Fund shortly before it makes a distribution, the distribution will be fully taxable to you even though, as an economic matter, it simply represents a return of a portion of your investment. This adverse tax result is known as "buying into a dividend."

You will be informed of the amount of your ordinary income dividends, qualifying dividend income, and capital gain distributions at the time they are paid, and you will be advised of the tax status for federal income tax purposes shortly after the close of each calendar year. If you have not held Shares for a full year, the Fund may designate and distribute to you, as ordinary income or capital gain, a percentage of income that is not equal to the actual amount of such income earned during the period of your investment in the Fund.

The Fund's investments in partnerships, including in partnerships defined as Qualified Publicly Traded Partnerships for tax purposes, may result in such Fund being subject to state, local or foreign income, franchise or withholding tax liabilities.

Excise Tax Distribution Requirements. Under the Code, a nondeductible excise tax of 4% is imposed on the excess of a RIC's "required distribution" for the calendar year ending within the RIC's taxable year over the "distributed amount" for such calendar year. The term "required distribution" means the sum of (a) 98% of ordinary income (generally net investment income) for the calendar year, (b) 98.2% of capital gain (both long-term and short-term) for the one-year period ending on October 31 (or December 31, if the Fund so elects), and (c) the sum of any untaxed, undistributed net investment income and net capital gains of the RIC for prior periods. The term "distributed amount" generally means the sum of (a) amounts actually distributed by the Fund from its current year's ordinary income and capital gain net income and (b) any amount on which the Fund pays income tax for the taxable year ending in the calendar year. Although the Fund intends to distribute its net investment income and net capital gains so as to avoid excise tax liability, the Fund may determine that it is in the interest of shareholders to distribute a lesser amount. The Fund intends to declare and pay these amounts in December (or in January, which must be treated by you as received in December) to avoid these excise taxes, but can give no assurances that their distributions will be sufficient to eliminate all such taxes.

Foreign Currencies. Under the Code, gains or losses attributable to fluctuations in exchange rates which occur between the time the Fund accrues interest or other receivables or accrues expenses or other liabilities denominated in a foreign currency, and the time the Fund actually collects such receivables or pays such liabilities, are treated as ordinary income or ordinary loss. Similarly, gains or losses from the disposition of foreign currencies, from the disposition of debt securities denominated in a foreign currency, or from the disposition of a forward foreign currency contract which are attributable to fluctuations in the value of the foreign currency between the date of acquisition of the asset and the date of disposition also are treated as ordinary income or loss. These gains or losses, referred to under the Code as “section 988” gains or losses, increase or decrease the amount of the Fund’s investment company taxable income available to be distributed to its shareholders as ordinary income, rather than increasing or decreasing the amount of such Fund’s net capital gain.

Foreign Taxes. The Fund will be subject to foreign withholding taxes with respect to certain dividends or interest received from sources in foreign countries. If at the close of the taxable year more than 50% in value of the Fund’s assets consists of stock in foreign corporations, the Fund will be eligible to make an election to treat a proportionate amount of those taxes as constituting a distribution to each shareholder, which would allow you either (subject to certain limitations) (1) to credit that proportionate amount of taxes against your U.S. Federal income tax liability as a foreign tax credit or (2) to take that amount as an itemized deduction. If the Fund is not eligible or chooses not to make this election, it will be entitled to deduct such taxes in computing the amounts it is required to distribute.

Sales and Exchanges. The sale of Shares is a taxable event on which a gain or loss is recognized. The amount of gain or loss is based on the difference between your tax basis in Shares and the amount you receive for them upon disposition. Generally, you will recognize long-term capital gain or loss if you have held your Shares for over one year at the time you sell or exchange them. Gains and losses on Shares held for one year or less will generally constitute short-term capital gains, except that a loss on Shares held six months or less will be re-characterized as a long-term capital loss to the extent of any long-term capital gain distributions that you have received on the Shares. A loss realized on a sale or exchange of Shares may be disallowed under the so-called “wash sale” rules to the extent the Shares disposed of are replaced with other Shares of that same Fund within a period of 61 days beginning 30 days before and ending 30 days after the Shares are disposed of, such as pursuant to a dividend reinvestment in Shares of the Fund. If disallowed, the loss will be reflected in an adjustment to the basis of the Shares acquired.

Taxes on Purchase and Redemption of Creation Units. An Authorized Participant who exchanges equity securities for Creation Units generally will recognize a gain or a loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of purchase (plus any cash received by the Authorized Participant as part of the issue) and the Authorized Participant’s aggregate basis in the securities surrendered (plus any cash received by the Authorized Participant as part of the issue). An Authorized Participant who exchanges Creation Units for equity securities generally will recognize a gain or loss equal to the difference between the Authorized Participant’s basis in the Creation Units (plus any cash received by the Authorized Participant as part of the redemption) and the aggregate market value of the securities received (plus any cash received by the Authorized Participant as part of the redemption). The Internal Revenue Service (the “IRS”), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing “wash sales,” or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether the wash sale rules apply and when a loss might be deductible.

IRAs and Other Tax-Qualified Plans. The one major exception to the preceding tax principles is that distributions on, and sales, exchanges and redemptions of, Shares held in an IRA or other tax-qualified plan are not currently taxable but may be when funds are withdrawn from the tax qualified plan unless the Shares were purchased with borrowed funds.

Medicare Tax. An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Fund Shares) of U.S. individuals, estates and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds a threshold amount. This Medicare tax, if applicable, is reported by you on, and paid with, your federal income tax return.

Backup Withholding. The Fund will be required in certain cases to withhold and remit to the U.S. Treasury the applicable backup withholding rate of the dividends and gross sales proceeds paid to any shareholder (i) who has either provided an incorrect tax identification number or no number at all, (ii) who is subject to backup withholding by the IRS, or (iii) who has failed to certify to the Fund, when required to do so, that he or she is not subject to backup withholding or is an "exempt recipient."

Cost Basis Reporting. Federal law requires that shareholders' cost basis, gain/loss, and holding period be reported to the IRS and to shareholders on the Consolidated Form 1099s when "covered" securities are sold. Covered securities are any RIC and/or dividend reinvestment plan shares acquired on or after January 1, 2012.

For those securities defined as "covered" under current IRS cost basis tax reporting regulations, accurate cost basis and tax lot information must be maintained for tax reporting purposes. This information is not required for Shares that are not "covered." The Fund and its service providers do not provide tax advice. You should consult independent sources, which may include a tax professional, with respect to any decisions you may make with respect to choosing a tax lot identification method. Shareholders should contact their financial intermediaries with respect to reporting of cost basis and available elections for their accounts.

State and Local Taxes. You may also be subject to state and local taxes on income and gain attributable to your ownership of Shares. You should consult your tax advisor regarding the tax status of distributions in your state and locality.

U.S. Tax Treatment of Foreign Shareholders. A non-U.S. shareholder generally will not be subject to U.S. withholding tax on gain from the redemption of Shares or on capital gain dividends (i.e., dividends attributable to long-term capital gains of the Fund) unless, in the case of a shareholder who is a non-resident alien individual, the shareholder is present in the United States for 183 days or more during the taxable year and certain other conditions are met. Non-U.S. shareholders generally will be subject to U.S. withholding tax at a rate of 30% (or a lower treaty rate, if applicable) on distributions by the Fund of net investment income, other ordinary income, and the excess, if any, of net short-term capital gain over net long-term capital loss for the year, unless the distributions are effectively connected with a U.S. trade or business of the shareholder. Exemptions from U.S. withholding tax are provided for certain capital gain dividends paid by the Fund from net long-term capital gains, if any, interest-related dividends paid by the Fund from its qualified net interest income from U.S. sources and short-term capital gain dividends if such amounts are reported by the Fund. Non-U.S. shareholders are subject to special U.S. tax certification requirements to avoid backup withholding and claim any treaty benefits. Non-U.S. shareholders should consult their tax advisors regarding the U.S. and foreign tax consequences of investing in the Fund.

Other Reporting and Withholding Requirements. Under the Foreign Account Tax Compliance Act (“FATCA”), a 30% withholding tax is imposed on payments or distributions made by the Fund to certain foreign entities, referred to as foreign financial institutions or nonfinancial foreign entities, that fail to comply (or be deemed compliant) with extensive reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts: (a) income dividends and (b) after December 31, 2018, certain capital gain distributions, return of capital distributions and the proceeds arising from the sale of Fund shares. Information about a shareholder in the Fund may be disclosed to the IRS, non-U.S. taxing authorities or other parties as necessary to comply with FATCA. Withholding also may be required if a foreign entity that is a shareholder of the Fund fails to provide the appropriate certifications or other documentation concerning its status under FATCA.

Consult Your Tax Professional. Your investment in the Fund could have additional tax consequences. You should consult your tax professional for information regarding all tax consequences applicable to your investments in the Fund. More tax information relating to the Fund is also provided in the SAI. This short summary is not intended as a substitute for careful tax planning.

DETERMINATION OF NET ASSET VALUE

The Fund calculates its NAV as of the regularly scheduled close of business of the Exchange (normally 4:00 p.m. Eastern time) on each day that the Exchange is open for business, based on prices at the time of closing, provided that any assets or liabilities denominated in currencies other than the U.S. dollar shall be translated into U.S. dollars at the prevailing market rates on the date of valuation as quoted by one or more major banks or dealers that make a two-way market in such currencies (or a data service provider based on quotations received from such banks or dealers). The NAV of the Fund is calculated by dividing the value of the net assets of the Fund (i.e., the value of its total assets less total liabilities) by the total number of outstanding Shares, generally rounded to the nearest cent. The price of Fund Shares is based on market price, and because ETF shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount).

In calculating the Fund’s NAV, the Fund’s investments are generally valued using market valuations. A market valuation generally means a valuation (i) obtained from an exchange or a major market maker (or dealer), (ii) based on a price quotation or other equivalent indication of value supplied by an exchange, a pricing service, or a major market maker (or dealer), or (iii) based on amortized cost, provided the amortized cost is approximately the value on current sale of the security. In the case of shares of funds that are not traded on an exchange, a market valuation means such fund’s published NAV per share. The Fund may use various pricing services or discontinue the use of any pricing service.

In the event that current market valuations are not readily available or such valuations do not reflect current market values, the affected investments will be valued using fair value pricing pursuant to the pricing policy and procedures approved by the Board of Trustees. A price obtained from a pricing service based on such pricing service’s valuation matrix may be used to fair value a security. The frequency with which the Fund’s investments are valued using fair value pricing is primarily a function of the types of securities and other assets in which the Fund invests pursuant to its investment objective, strategies and limitations.

Investments that may be valued using fair value pricing include, but are not limited to: (i) an unlisted security related to corporate actions; (ii) a restricted security (i.e., one that may not be publicly sold without registration under the Securities Act of 1933, as

amended (the “Securities Act”)); (iii) a security whose trading has been suspended or which has been de-listed from its primary trading exchange; (iv) a security that is thinly traded; (v) a security in default or bankruptcy proceedings for which there is no current market quotation; (vi) a security affected by currency controls or restrictions; and (vii) a security affected by a significant event (i.e., an event that occurs after the close of the markets on which the security is traded but before the time as of which the Fund’s NAV is computed and that may materially affect the value of the Fund’s investments). Examples of events that may be “significant events” are government actions, natural disasters, armed conflict, acts of terrorism, and significant market fluctuations.

Valuing the Fund’s investments using fair value pricing will result in using prices for those investments that may differ from current market valuations. Use of fair value prices and certain current market valuations could result in a difference between the prices used to calculate the Fund’s NAV and the prices used by the Fund’s Underlying Index, which, in turn, could result in a difference between the Fund’s performance and the performance of the Fund’s Underlying Index.

Because foreign markets may be open on different days than the days during which a shareholder may purchase Shares, the value of the Fund’s investments may change on days when shareholders are not able to purchase Shares. Additionally, due to varying holiday schedules, redemption requests made on certain dates may result in a settlement period exceeding seven calendar days. A list of the holiday schedules of the foreign exchanges of the Fund’s Underlying Index, as well as the dates on which a settlement period would exceed seven calendar days in 2018 and 2019, is contained in the SAI.

The value of assets denominated in foreign currencies is converted into U.S. dollars using exchange rates deemed appropriate by the Adviser. Any use of a different rate from the rates used by each Index Provider may adversely affect the Fund’s ability to track its Underlying Index.

The right of redemption may be suspended or the date of payment postponed with respect to the Fund (1) for any period during which the Exchange or listing exchange is closed (other than customary weekend and holiday closings), (2) for any period during which trading on the Exchange or listing exchange is suspended or restricted, (3) for any period during which an emergency exists as a result of which disposal of the Fund’s portfolio securities or determination of its NAV is not reasonably practicable, or (4) in such other circumstances as the SEC permits.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often the Shares of the Fund traded on the national securities exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of the Fund during the past four calendar quarters can be found at www.globalxfunds.com.

INFORMATION REGARDING THE INDEX AND THE INDEX PROVIDER

Solactive E-commerce Index

The Solactive E-commerce Index is designed to provide exposure to exchange-listed companies that are positioned to benefit from the increased adoption of e-commerce as a distribution model, including but not limited to companies whose principal business is in operating e-commerce platforms, providing e-commerce software and services, and/or selling goods and services online (collectively, "E-commerce Companies"), as defined by Solactive AG, the provider of the Solactive E-commerce Index ("Index Provider").

In constructing the Solactive E-commerce Index, the Index Provider first applies a proprietary natural language processing algorithm to the eligible universe, which seeks to identify and rank companies with direct exposure to the e-commerce industry based on filings, disclosures and other public information (e.g. regulatory filings, earnings transcripts, etc.). Companies identified by the natural language processing algorithm, as of the selection date, are further reviewed by the Index Provider on the basis of revenue related to e-commerce activities. To be eligible for the Solactive E-commerce Index, a company is considered by the Index Provider to be an E-commerce Company if the company generates at least 50% of its revenues from e-commerce activities, as determined by the Index Provider. E-commerce Companies are those companies that (i) operate e-commerce platforms that connect buyers and sellers of goods and services via online marketplaces, (ii) provide e-commerce software, analytics or services that facilitate the development and enhancement of e-commerce platforms, and/or (iii) primarily sell goods and services online and generate the majority of their overall revenue from online retail, as determined by the Index Provider.

To be a part of the eligible universe of the Solactive E-commerce Index, certain minimum market capitalization and liquidity criteria, as defined by the Index Provider, must be met. As of October 1, 2018, companies must have a minimum market capitalization of \$200 million and a minimum average daily turnover for the last 6 months greater than or equal to \$2 million in order to be eligible for inclusion in the Solactive E-commerce Index. As of October 1, 2018, companies listed in the following countries were eligible for inclusion in the Solactive E-commerce Index: Australia, Austria, Belgium, Brazil, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, Spain, Sweden, Switzerland, South Korea, Taiwan, the United Kingdom, and the United States.

The Solactive E-commerce Index is weighted according to a modified capitalization weighting methodology and is reconstituted and re-weighted semi-annually. Modified capitalization weighting seeks to weight constituents primarily based on market capitalization, but subject to caps on the weights of the individual securities. Generally speaking, this approach will limit the amount of concentration in the largest market capitalization companies and increase company-level diversification. The Solactive E-commerce Index may include large-, mid- or small-capitalization companies, and components primarily include information technology and consumer discretionary companies.

Disclaimer

Solactive AG is a leading company in the structuring and indexing business for institutional clients. Solactive AG runs the Solactive index platform. Solactive indices are used by issuers worldwide as underlying indices for financial products. Solactive AG does not sponsor, endorse or promote the Fund and is not in any way connected to the Fund and does not accept any liability in relation to the Fund's issue, operation and trading.

OTHER SERVICE PROVIDERS

SEI Investments Global Funds Services is the sub-administrator for the Fund.

Brown Brothers Harriman & Co. is the custodian and transfer agent for the Fund.

Stradley Ronon Stevens & Young, LLP serves as legal counsel to Global X Funds® ("Trust") and the Trust's Independent Trustees.

PricewaterhouseCoopers LLP will serve as the Fund's independent registered public accounting firm for the fiscal year ending October 31, 2019.

ADDITIONAL INFORMATION

The Trust enters into contractual arrangements with various parties, including among others, the Fund's Adviser, sub-adviser(s) (if applicable), custodian, and transfer agent who provide services to the Fund. Shareholders are not parties to any such contractual arrangements and are not intended beneficiaries of those contractual arrangements, and those contractual arrangements are not intended to create in any shareholder any right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the Trust.

This Prospectus provides information concerning the Fund that should consider in determining whether to purchase Fund Shares. Neither this Prospectus nor the SAI is intended, or should be read, to be or give rise to an agreement or contract between the Trust or the Fund and any investor, or to give rise to any rights in any shareholder or other person other than any rights under federal or state law that may not be waived.

FINANCIAL HIGHLIGHTS

Because the Fund has not commenced operations as of the October 31, 2018 fiscal year end, financial highlights are not yet available.

OTHER INFORMATION

The Fund is not sponsored, endorsed, sold or promoted by the Exchange. The Exchange makes no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Fund to achieve its objective. The Exchange has no obligation or liability in connection with the administration, marketing or trading of the Fund.

For purposes of the 1940 Act, shares that are issued by a registered investment company and purchases of such shares by investment companies and companies relying on Sections 3(c)(1) or 3(c)(7) of the 1940 Act are subject to the restrictions set forth in Section 12(d)(1) of the 1940 Act, except as permitted by an exemptive order that permits registered investment companies to invest in shares beyond the limits in Section 12(d)(1)(A), subject to certain terms and conditions.

The Trust has obtained an SEC order permitting registered investment companies to invest in Shares, as described above. One such condition stated in the order is that investment companies relying on the order must enter into a written agreement with the Trust.

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker-dealers who are not “underwriters” but are participating in a distribution (as contrasted with ordinary secondary trading transactions), and thus dealing with Shares that are part of an “unsold allotment” within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with the Shares that are part of an over-allotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that the prospectus is available at the Exchange upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.
