

The Global X Next Emerging & Frontier ETF seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Solactive Next Emerging & Frontier Index.

GLOBAL EXPOSURE

In the past, emerging market investment has been dominated by exposure to the largest emerging economies: the BRICs (Brazil, Russia, India, and China). After a period of explosive growth, however, these countries are now experiencing slowing growth rates, aging populations, and increasing correlations to developed markets.

This has driven investors to seek exposure to the next group of countries that are both primed for rapid economic expansion and can potentially provide diversification for their portfolios.

The Global X Next Emerging & Frontier ETF offers broad exposure to these attractive economies by accessing the next emerging markets (ex-BRIC, South Korea, and Taiwan) and frontier markets.

COUNTRIES REPRESENTED

Frontier Markets			Emerging Markets	
Argentina	Kenya	Papua New Guinea	Chile	South Africa
Bangladesh	Kuwait	Qatar	Mexico	Hungary
Cambodia	Mongolia	U.A.E	Colombia	Thailand
Gabon	Nigeria	Ukraine	Philippines	Indonesia
Georgia	Oman	Vietnam	Czech Republic	Turkey
Ghana	Pakistan	Zambia	Poland	Malaysia
Kazakhstan	Panama		Egypt	

THE CASE

The Global X Next Emerging & Frontier ETF provides investors broad exposure to the next emerging markets (excludes BRICs, South Korea, and Taiwan) and frontier markets.

THE "NEXT" BRICs

Growth by Level of Development

Expansion of the 'Next 11'

In 2005, Goldman Sachs introduced the concept of the 'Next 11'; a group of countries with large populations and strong growth prospects that could eventually rival the BRICs and G7 nations in global economic impact. The Solactive Next Emerging & Frontier Index expands on this concept by providing exposure to 33 countries that have been identified for exhibiting high growth potential and favorable demographics that could stimulate their rise as economic powers.

Demographic Advantage

Emerging and frontier markets have relatively young populations that are growing at faster rates than their more developed peers. Countries represented in the index have an average age of 28.6 years, compared to 33.6 years for the BRICs, and 40.5 years in developed nations. As a result, these economies offer more competitive labor forces that will likely become the world's next major suppliers of low cost labor. (CIA World Factbook and World Bank, 2014)

Low Correlation

Frontier markets not only demonstrate comparatively low correlations to developed markets, but also low correlations among themselves. This is due to the fact that developing economies are often driven more by domestic-focused sectors such as agriculture, construction, and local banking. With low correlations to other markets, investors have the possibility of gaining greater diversification through exposure to these economies. (Source: Bloomberg and Investment Frontier, 2015)

Closing The Gap

Countries represented in the index represent 25% of the world's population, but just 12% of the world's GDP and 8% of the world's equity market cap. Economists expect developing and frontier nations to close the gap with their developed counterparts as GDP becomes more representative of the population size. With a market cap of just 37% of GDP, Frontier markets remain under-capitalized and thus have strong growth potentials. (Source: World Bank, 2014)

Investing involves risk, including possible loss of principal investments in smaller companies typically exhibit higher volatility. The fund is non-diversified. International investing may involve risk of capital loss from unfavorable fluctuations in currency values, from differences in generally accepted accounting principles, or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. Frontier markets generally have less developed capital markets than traditional emerging market countries, and, consequently, the risks of investing in foreign securities are magnified in such countries. These countries are subject to potentially significant political, social and economic instability, which could materially and adversely affect the companies in which the Fund may invest. The Fund invests in securities and markets that are susceptible to fluctuations in certain commodity markets. Commodities represent a significant portion of the Latin American and Middle Eastern economies. Any negative changes in commodity markets could have a great impact on these economies. Unlike most exchange-traded funds, the Fund intends to effect all creations and redemptions partially for cash, rather than in-kind securities. As a result, an investment in the Fund may be less tax-efficient than an investment in a more conventional ETF.

Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Global X NAVs are calculated using prices as of 4:00 PM Eastern Time. The closing price is the Mid-Point between the Bid and Ask price as of the close of exchange.
