

The Global X MLP & Energy Infrastructure ETF is a tax-efficient vehicle for gaining access to MLPs and similar entities, such as the General Partners of MLPs and energy infrastructure corporations

KEY FEATURES

Tax Efficient

Unlike traditional MLP funds, MLPX avoids fund level taxes by limiting direct MLP exposure and investing in similar entities, such as the General Partners of MLPs and other energy infrastructure corporations.

Midstream Exposure

MLPX invests in midstream infrastructure entities such as pipelines and storage facilities that have less sensitivity to energy prices.

High Income Potential

MLPX invests in MLPs and other energy infrastructure companies, which may result in above-average yields due to their propensity to distribute a high percentage of their cash flows to shareholders.

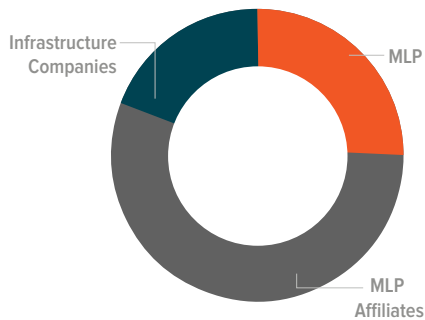

THE CASE

The Global X MLP & Energy Infrastructure ETF seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Solactive MLP & Energy Infrastructure Index.

MLP & ENERGY INFRASTRUCTURE (MLPX) POTENTIAL BENEFITS

Fund Composition

MLPX ETF Management Fee Source: ETF Database, Category: MLP ETFs¹

Midstream Energy Infrastructure

Midstream energy infrastructure MLPs and corporations principally own and operate assets used in energy logistics, including pipelines, storage facilities, and other assets used in the transporting, storing, gathering, and processing of natural gas, natural gas liquids, crude oil, or refined products.

Energy Infrastructure corporations include MLP affiliates that own, directly or indirectly, MLP general partner interests. The general partner manages the MLP and typically holds an economic interest in it and receives a percentage of the MLP profits over a certain threshold.

The Global X MLP & Energy Infrastructure ETF is a low cost and tax-efficient vehicle for gaining access to MLPs, MLP affiliates, and energy infrastructure corporations.

Potential Sector Benefits	Tax Efficiency
<ul style="list-style-type: none"> Energy Renaissance Toll Road Business Model Inflation Protection Low Correlation <p>See next page for detailed descriptions</p>	<p>RIC Structure avoids taxes common in MLP ETFs:</p> <ul style="list-style-type: none"> No corporate Taxes (Unlike most MLP ETFs)¹ No K-1s (1099 tax reporting only) IRA and 401k eligible

	Regulated Investment Company (RIC) ¹	C-Corporation
Definition	A fund structure that allows for taxes to be passed on to the individual investors	A fund structure that is taxed on the fund level in addition to the individual level
What	Most ETFs	Most MLP ETFs
Examples	MLPX	MLPA, MLPJ, AMLP, YMLP
Holdings	Up to 25% of holdings can be MLPs	Up to 100% of holdings can be MLPs
Taxation	No taxation at fund level	Fund subject to corporate taxes which can result in higher 'other expenses'.

¹ Comparison of MLP-related exchange-traded funds as of 8/3/16. Funds may track different benchmarks and have different performance. ETFs are structured as open-end investment companies under the Investment Company Act of 1940; there is no guarantee that distributions will be made, and dividends may be reduced or eliminated at any time.

Understanding Sector Benefits:

- Energy Renaissance is driving hundreds of billions of dollars in investments to expand and improve domestic energy infrastructure.
- Toll Road Business Model where revenues are linked to volume of resources transferred, not the price of the underlying commodity.
- Inflation Protection - Contracts often have inflation hedges built into their contracts, which can protect revenue streams during periods of higher inflation.
- Low Correlation - Historically low correlation with the S&P 500 allows investors to potentially diversify their portfolios.

Investing involves risk, including the possible loss of principal. Investments in securities of MLPs involve risk that differ from investments in common stock including risks related to limited control and limited rights to vote on matters affecting the MLP. MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). High short-term performance of the fund is unusual and investors should not expect such performances to be repeated. The MLP fund invests in the energy industry, which entails significant risk and volatility. The fund is non-diversified which represents a heightened risk to investors. Furthermore, the fund invests in small and mid-capitalization companies, which pose greater risks than large companies. The Fund also expects to pay distributions, which will be treated as a return of capital for tax purposes rather than from net profits and shareholders should not assume that the source of distributions is from the net profits of the fund.

The Fund derives substantially all of its cash flow from investments in equity securities of MLPs. The amount of cash that the Fund will have available to pay or distribute to you depends entirely on the ability of the MLPs that the Fund owns to make distributions to their partners and the tax character of those distributions. Neither the Fund nor the Adviser has control over the actions of underlying MLPs. The amount of cash that each individual MLP can distribute to its partners will depend on the amount of cash it generates from operations, which will vary from quarter to quarter depending on factors affecting the energy infrastructure market generally. Available cash will also depend on the MLPs' level of operating costs (including incentive distributions to the general partner), level of capital expenditures, debt service requirements, acquisition costs (if any), fluctuations in working capital needs, and other factors. The MLP holdings of the Fund expect to generate significant investment income, and the Fund's investments may not distribute the expected or anticipated levels of cash, resulting in the risk that the Fund may not have the ability to make cash distributions as investors expect from MLP-focused investments.
