The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. Returns for periods greater than one year are annualized. Market price returns are based upon the midpoint of the bid/ask spread at the close of the exchange and do not represent the returns you would receive if you traded shares at other times. For performance data current to the most recent month end, please call 1-888-GXFUND-1 (1-888-493-8631), or visit [www.globalxfunds.com](http://www.globalxfunds.com).

## DEFINITIONS

ICE BofA Merrill Diversified Core U.S. Preferred Securities Index.	The ICE BofA Merrill Lynch Diversified Core U.S. Preferred Securities Index tracks preferred securities in the United States. The Underlying Index includes different categories of preferred stock, such as floating, variable and fixed-rate preferreds, cumulative and noncumulative preferreds, and trust preferreds.
S&P U.S. Preferred Stock Index	The S&P U.S. Preferred Stock Index is designed to serve the investment community's need for an investable benchmark representing the U.S. preferred stock market. Preferred stocks are a class of capital stock that pays dividends at a specified rate and has a preference over common stock in the payment of dividends and the liquidation of assets.
12-month Dividend Yield	The yield an investor would have received if they had held the fund over the last twelve months, assuming most recent NAV. The 12-month yield is calculated by summing any income distributions over the past twelve months and dividing by the sum of the most recent NAV.
Distribution Yield	The annual yield an investor would receive if the most recent fund distribution remained the same going forward. The yield represents a single distribution from the fund and does not represent total return of the fund. The distribution yield is calculated by annualizing the most recent distribution and dividing by the most recent fund NAV.
Annualized Volatility	The annualized standard deviation of the daily returns of the security using the closing levels of the index during the 22 index-day period preceding that day.
Beta	Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index. A beta below one suggests that the fund was less volatile than the market benchmark.
Sharpe Ratio	Measures the return for each unit of risk. The risk free rate is subtracted from the mean return and is divided by the standard deviation of returns.

(1) PFFD's net expense ratio was 48% lower than the industry average, as of 12/31/18, per ETF.com's category 'Fixed Income: U.S. - Corporate Preferred Stock Broad Maturities'.

(2) Credit Quality Methodology: All rated securities are rated by at least one of the three major rating agencies (Moody's, S&P, & Fitch). If more than one of these rating agencies rated the security, then an average of the ratings was taken to decide the security's rating. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest).

(3) Source : Bloomberg as of 12/31/2018

Global X Management Company, LLC serves as an advisor to the Global X Funds. The Funds are distributed by SEI Investments Distribution Co. (SIDCO, 1 Freedom Valley Drive, Oaks, PA, 19456), which is not affiliated with Global X Management Company, LLC.

Investing involves risk, including the possible loss of principal. Preferred stock is subject to many of the risks associated with debt securities, including interest rate risk. In addition, preferred stock may not pay a dividend, an issuer may suspend payment of dividends on preferred stock at any time, and in certain situations, an issuer may call or redeem its preferred stock or convert it to common stock. High yielding stocks are often speculative, high-risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the fund's performance. PFFD is non-diversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Global X NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

Since the Fund's shares did not trade in the secondary market until several days after the Fund's inception, for the period from inception to the first day of secondary market trading in shares, the NAV of the Fund is used to calculate market returns.

Global X Funds are not sponsored, endorsed, issued, sold or promoted by BofA Merrill Lynch, nor does BofA Merrill Lynch make any representations regarding the advisability of investing in the Global X Funds. Neither SIDCO nor Global X is affiliated with BofA Merrill Lynch. (BofA Merrill Lynch indexes are "as is". BofA Merrill Lynch makes no representations or warranties and disclaims all liability arising from the BofA Merrill Lynch indexes or their use.)
