**SUPPLEMENT DATED JUNE 8, 2018**  
**TO THE PROSPECTUS, SUMMARY PROSPECTUS, AND STATEMENT OF ADDITIONAL INFORMATION**  
**(“SAI”), EACH DATED MARCH 1, 2018, AS AMENDED AND SUPPLEMENTED FROM TIME TO TIME**

*The information in this Supplement updates information in, and should be read in conjunction with, the Prospectus, Summary Prospectus, and SAI for the Fund. Capitalized terms and certain other terms used in this Supplement, unless otherwise defined in this Supplement, have the meanings assigned to them in the Prospectus, Summary Prospectus, and/or SAI for the Fund.*

*The following reflects a change to the name of the Underlying Index resulting from the decision by the Index Provider to update the name of the Underlying Index. This update is effective immediately.*

1. The name of the Underlying Index is replaced by the following name wherever it appears in the Prospectus, Summary Prospectus, and SAI:

Scientific Beta Extended Developed Europe Multi-Beta Multi-Strategy Four-Factor Equal Risk Contribution (ERC) Index

This updated name does not represent a change to the current Underlying Index, but rather is intended to reflect updates that the Index Provider has made to the name of the Underlying Index.

*The following reflects several changes resulting from the decision by the Index Provider to make adjustments to the Underlying Index methodology as part of the Index Provider’s review process. These updates are effective June 15, 2018.*

2. The third and fourth paragraphs from the section “Principal Investment Strategies” that appear on page 74 of the Prospectus, and the third and fourth paragraphs from the section “Principal Investment Strategies” that appear on page 2 of the Summary Prospectus, are deleted in their entirety and replaced with the following:

The objective of the Underlying Index is to outperform traditional market capitalization-weighted indexes, with similar or lower volatility. The method to achieve outperformance relative to traditional market capitalization-weighted indexes is derived from a proprietary process for selecting and weighting index components from the initial universe.

The components of the Underlying Index are selected from a universe of 600 of the largest, most liquid stocks that are ordinarily traded principally on a stock exchange in one of the following 15 developed European countries: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom. The Underlying Index’s components are selected by applying four factors that have been widely recognized by academic literature to outperform market capitalization weighted-indexes over the long run: Value, Size, Low-Volatility and Momentum. Each of these factors is applied by using the following metrics: price-to-book ratio for Value; free-float market capitalization for Size; historical volatility over the trailing 104 week period for Low-Volatility; and one-year-minus-one-month total returns for Momentum.

3. The paragraphs under the section titled “Scientific Beta Extended Developed Europe Multi-Beta Multi-Strategy Equal Risk Contribution Index” that appear on page 183 of the Prospectus and page 27 of the SAI are deleted in their entirety and replaced with the following:

The Underlying Index generally comprises approximately 600 or less European-listed common stocks selected based on a proprietary methodology developed by the Index Provider.

The objective of the Underlying Index is to outperform traditional market capitalization-weighted indexes, with similar or lower volatility. The method used by the Index Provider to seek to achieve outperformance relative to traditional market capitalization-weighted indexes is derived from a proprietary process for selecting and weighting index components from the initial universe.

The components of the Underlying Index are selected from a universe of 600 of the largest, most liquid stocks that are ordinarily traded principally on a stock exchange in one of the following 15 developed European countries: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom. The Underlying Index's components are selected by applying four factors that have been widely recognized by academic literature to outperform market capitalization weighted-indexes over the long run: Value, Size, Low-Volatility and Momentum. Each of these factors is applied by using the following metrics: price-to-book ratio for Value; free-float market capitalization for Size; historical volatility over the trailing 104 week period for Low-Volatility; and one-year-minus-one-month total returns for Momentum.

Once these companies are selected for each of the four factors, Value, Size, Low-Volatility and Momentum, four different weighting schemes are applied to the constituents:

1. Maximum Deconcentration (each component is equally weighted);
2. Maximum Decorrelation (each component is weighted based on its correlation to the other companies in the index, overweighting the companies with the lowest correlations and underweighting those with the highest);
3. Efficient Maximum Sharpe Ratio (each component is weighted to maximize risk-adjusted returns); and
4. Diversified Risk Weighted strategies (each component is weighted so that it contributes equal amounts of volatility).

The result of each weighting scheme is averaged for each factor. By averaging the weights produced by each of these four weighting schemes, the Underlying Index seeks to diversify the risks and assumptions associated with any one weighting scheme.

Finally, the weights to each of the factor components are then allocated such that each factor makes an equal contribution to overall potential out-performance of the Underlying Index versus a market capitalization-weighted index.

**Global X Scientific Beta Europe ETF**  
NYSE Arca, Inc.: SCID

**2018 Summary Prospectus**

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund (including the Fund's statement of additional information and annual report) online at <http://www.globalxfunds.com/funds/scid>. You can also get this information at no cost by calling 1-888-GX-FUND-1 or by sending an e-mail request to [info@globalxfunds.com](mailto:info@globalxfunds.com). The Fund's prospectus and statement of additional information, both dated March 1, 2018, as amended and supplemented from time to time, along with the financial statements included in the Fund's most recent annual report to shareholders dated October 31, 2017, are incorporated by reference into (legally made a part of) this Summary Prospectus.

## Global X Scientific Beta Europe ETF

Ticker: SCID Exchange: NYSE Arca, Inc.

### INVESTMENT OBJECTIVE

The Global X Scientific Beta Europe ETF ("Fund") seeks investment results that correspond generally to the price and yield performance, before fees and expenses, of the Scientific Beta Extended Developed Europe Multi-Beta Multi-Strategy Equal Risk Contribution Index ("Underlying Index").

### FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares ("Shares") of the Fund. You will also incur usual and customary brokerage commissions when buying and selling Shares.

**Annual Fund Operating Expenses** (expenses that you pay each year as a percentage of the value of your investment):

Management Fees:	0.38%
Distribution and Service (12b-1) Fees:	None
Other Expenses:	0.00%
<b>Total Annual Fund Operating Expenses:</b>	<b>0.38%</b>

**Example:** The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account customary brokerage commissions that you pay when purchasing or selling Shares of the Fund in the secondary market. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

One Year	Three Years	Five Years	Ten Years
\$39	\$122	\$213	\$480

**Portfolio Turnover:** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 26.52% of the average value of its portfolio.

### PRINCIPAL INVESTMENT STRATEGIES

The Fund invests at least 80% of its total assets in the securities of the Underlying Index and in American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs") based on the securities in the Underlying Index. The Fund's 80% investment policy is non-fundamental and requires 60 days prior written notice to shareholders before it can be changed.

The Underlying Index generally comprises approximately 600 or less European-listed common stocks selected based on a proprietary methodology developed by EDHEC Risk Institute Asia Ltd. ("EDHEC" or the "Index Provider").

The objective of the Underlying Index is to outperform traditional market capitalization-weighted indexes, with lower volatility. The method used by the Index Provider to seek to achieve outperformance relative to traditional market capitalization-weighted indexes is derived from a proprietary process for selecting and weighting index components from the initial universe.

The components of the Underlying Index are selected from a universe of the 600 largest, as measured by free float market capitalization, and most liquid stocks that are ordinarily traded principally on a stock exchange in one of the following 16 developed European countries: Austria,

**GO PAPERLESS**

Sign up now for eDelivery of fund documents  
from Global X Funds at [www.icdelivery.com](http://www.icdelivery.com)

Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom. The Underlying Index's components are selected by applying four factors that have been widely recognized by academic literature to outperform market capitalization weighted-indexes over the long run: Value, Size, Low-Volatility and Momentum. Each of these factors is applied by using the following metrics: price-to-book ratio for Value; free-float market capitalization for Size; historical volatility over the trailing 104 week period for Low-Volatility; and one-year-minus-one-month total returns for Momentum.

Finally, components are weighted by the Index Provider by employing a proprietary, multi-step process that combines multiple weighting methodologies to diversify the risks associated with any one weighting scheme. For additional details on the weighting methodology, please see **Information Regarding the Indices and the Index Providers**. The Fund's investment objective and Underlying Index may be changed without shareholder approval.

The Underlying Index is sponsored by the Index Provider, which is an organization that is independent of the Fund and Global X Management Company LLC, the investment adviser for the Fund ("Adviser"). The Index Provider determines the relative weightings of the securities in the Underlying Index and publishes information regarding the market value of the Underlying Index.

The Adviser uses a "passive" or indexing approach to try to achieve the Fund's investment objective. Unlike many investment companies, the Fund does not try to "outperform" the Underlying Index and does not seek temporary defensive positions when markets decline or appear overvalued.

The Fund generally will use a replication strategy. A replication strategy is an indexing strategy that involves investing in the securities of the Underlying Index in approximately the same proportions as in the Underlying Index. However, the Fund may utilize a representative sampling strategy with respect to the Underlying Index when a replication strategy might be detrimental or disadvantageous to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of equity securities to replicate the Underlying Index, in instances in which a security in the Underlying Index becomes temporarily illiquid, unavailable or less liquid, or as a result of legal restrictions or limitations (such as tax diversification requirements) that apply to the Fund but not the Underlying Index.

The Adviser expects that, over time, the correlation between the Fund's performance and that of the Underlying Index, before fees and expenses, will exceed 95%. A correlation percentage of 100% would indicate perfect correlation. If the Fund uses a replication strategy, it can be expected to have greater correlation to the Underlying Index than if it uses a representative sampling strategy.

The Fund concentrates its investments (i.e., holds 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Underlying Index is concentrated. As of December 29, 2017, the Underlying Index is not concentrated in a sector.

## SUMMARY OF PRINCIPAL RISKS

As with any investment, you could lose all or part of your investment in the Fund, and the Fund's performance could trail that of other investments. There is no guarantee that the Fund will achieve its investment objective. The Fund is subject to the principal risks noted below, any of which may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the **Additional Information About the Funds** section of this Prospectus and in the Statement of Additional Information ("SAI").

**Asset Class Risk:** Securities in the Underlying Index or otherwise held in the Fund's portfolio may underperform in comparison to the general securities markets or other asset classes.

**Asset Fluctuation Risk:** Certain shareholders, including an Authorized Participant, the Adviser or an affiliate of the Adviser, may own a substantial amount of the Fund's Shares. Additionally, from time to time an Authorized Participant, a third party investor, the Adviser, or an affiliate of the Adviser may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or to allow the Fund to achieve size or scale. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on a national securities exchange and may, therefore, have a material upward or downward effect on the market price of the Shares.

**Authorized Participant Concentration Risk:** The Fund has a limited number of financial institutions that may act as "Authorized Participants" (as defined in the SAI). Only Authorized Participants who have entered into agreements with the Fund's distributor may engage in creation or redemption transactions directly with the Fund. To the extent that those Authorized Participants exit the business or are unable to process creation and/or redemption orders, and no other Authorized Participant is able to step forward to create or redeem in either of those cases, Shares may be more likely to trade at a premium or discount to NAV, and possibly face trading halts and/or delisting from an exchange. Authorized Participant Concentration Risk may be heightened because the Fund invests in non-U.S. securities.

**Currency Risk:** The Fund may invest in securities denominated in foreign currencies. Because the Fund's NAV is determined in U.S. dollars, the Fund's NAV could decline if currencies of the underlying securities depreciate against the U.S. dollar or if there are delays or limits on repatriation of such currency. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the Fund's NAV may change quickly and without warning, which could have a significant negative impact on the Fund.

**Custody Risk:** Less developed markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by local banks, agents and depositories.

**Cyber Security Risk:** Failures or breaches of the electronic systems of the Fund, the Adviser, and the Fund's other service providers, market makers, Authorized Participants or the issuers of securities in which the Fund invests have the ability to cause disruptions and negatively impact the Fund's business operations, potentially resulting in financial losses to the Fund and its shareholders. While the Fund has established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Furthermore, the Fund cannot control the cyber security plans and systems of the Fund's service providers, market makers, Authorized Participants or issuers of securities in which the Fund invests.

**Equity Securities Risk:** Equity securities are subject to changes in value and their values may be more volatile than other asset classes, as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

**European Economic Risk:** Decreasing European imports, new trade regulations, changes in exchange rates, a recession in Europe, or a slowing of economic growth in this region could have an adverse impact on the securities in which the Fund invests.

**Foreign Securities Risk:** The Fund's investments in foreign securities can be riskier than U.S. securities investments. Investments in the securities of foreign issuers (including investments in ADRs and GDRs) are subject to the risks associated with investing in those foreign markets, such as heightened risks of inflation or nationalization. The prices of foreign securities and the prices of U.S. securities have, at times, moved in opposite directions. In addition, securities of foreign issuers may lose value due to political, economic and geographic events affecting a foreign issuer or market. During periods of social, political or economic instability in a country or region, the value of a foreign security traded on U.S. exchanges could be affected by, among other things, increasing price volatility, illiquidity, or the closure of the primary market on which the security (or the security underlying the ADR or GDR) is traded. You may lose money due to political, economic and geographic events affecting a foreign issuer or market.

**Geographic Risk:** A natural or other disaster could occur in a geographic region in which the Fund invests, which could affect the economy or particular business operations of companies in the specific geographic region, causing an adverse impact on the Fund's investments in the affected region or in a region economically tied to the affected region.

**Index-Related Risk:** There is no guarantee that the Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders.

**International Closed Market Trading Risk:** To the extent that the underlying securities held by the Fund trade on foreign exchanges that may be closed when the securities exchange on which the Fund's Shares trade is open, there are likely to be deviations between the current price of such an underlying security and the last quoted price for the underlying security (i.e., the Fund's quote from the closed foreign market). These deviations could result in premiums or discounts to the Fund's NAV that may be greater than those experienced by other exchange-traded funds ("ETFs").

**Issuer Risk:** Fund performance depends on the performance of individual companies in which the Fund invests. Changes to the financial condition of any of those companies may cause the value of their securities to decline.

**Large-Capitalization Companies Risk:** Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

**Listing Standards Risk:** Under new continuous listing standards adopted by the Fund's listing exchange, the Fund will be required to confirm on an ongoing basis that the components of the Underlying Index satisfy the applicable listing requirements. In the event that the Underlying Index does not comply with the applicable listing requirements, the Fund would be required to rectify such non-compliance by requesting that the Index Provider modify the Underlying Index, adopting a new underlying index, or obtaining relief from the SEC. Failure to rectify such non-compliance may result in the Fund being delisted by the listing exchange.

**Management Risk:** The Fund is subject to the risk that the Adviser's investment management strategy may cause the Fund to underperform the market or its relevant benchmark or adversely affect the ability of the Fund to achieve its investment objective.

**Market Risk:** Turbulence in the financial markets and reduced liquidity may negatively affect issuers, which could have an adverse effect on the Fund. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, or other government actors, which could include increasing interest rates, could cause increased volatility in financial markets and lead to higher levels of Fund redemptions, which could have a negative impact on the Fund. The Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns.

**Market Trading Risk:** Shares of the Fund are publicly traded on a national securities exchange which may subject shareholders to numerous market trading risks, including the potential lack of an active market for Shares, losses from trading in secondary markets, periods of high volatility and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to NAV.

**Mid-Capitalization Companies Risk:** Mid-capitalization companies may have greater price volatility, lower trading volume and less liquidity than large-capitalization companies. In addition, mid-capitalization companies may have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies.

**Model Portfolio Risk:** The risk that investments selected using a proprietary methodology (*i.e.*, quantitative model) may perform differently from the market as a whole or from their expected performance. There can be no assurance that use of a quantitative model will enable the Fund to achieve positive returns or outperform the market.

**Passive Investment Risk:** The Fund is not actively managed and the Adviser does not attempt to take defensive positions in declining markets. Unlike many investment companies, the Fund does not seek to outperform its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund's return to be lower than if the Fund employed an active strategy.

**Premium/Discount Risk:** Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

**Risk of Investing in France:** The Fund's investment in French issuers may subject the Fund to legal, regulatory, political, currency, security, and economic risk specific to France. The French economy, along with certain other European Union (the "EU") economies, experienced a significant economic slowdown during the recent financial crisis. Recently, new concerns emerged with respect to the economic outlook for certain EU countries, including France. As a result, the French economy has experienced significant volatility and adverse trends due to concerns about a prolonged economic downturn and rising government debt levels. The French economy is dependent on agricultural exports, and as a result, is susceptible to fluctuations in demand for agricultural products.

**GO PAPERLESS**

Sign up now for eDelivery of fund documents from Global X Funds at [www.icstdelivery.com](http://www.icstdelivery.com)

**Risk of Investing in Germany:** The Fund's investment in German issuers subjects the Fund to legal, regulatory, political, currency, security, and economic risks specific to Germany. The German economy, along with certain other European Union (the "EU") economies, experienced a significant economic slowdown during the recent financial crisis. Germany has an export dependent economy and therefore relies heavily on trade with key trading partners, including the United States, France, Italy and other European countries. Germany is dependent on the economies of these other countries and any change in the price or demand for German exports may have an adverse impact on its economy.

**Risk of Investing in Switzerland:** Investments in Swiss issuers may subject the Fund to legal, regulatory, political, currency, security, and economic risks specific to Switzerland. International trade is a large component of the Swiss economy and Switzerland depends upon exports to generate economic growth. The Swiss economy relies on certain key trading partners in order to sustain continued economic growth. Switzerland's economic growth generally mirrors slowdowns and growth spurts experienced in other countries, including the U.S. and certain Western European countries. Secessionist movements, such as the Catalan movement in Spain, may have an adverse effect on the Swiss economy.

**Risk of Investing in the United Kingdom:** Investments in United Kingdom issuers may subject the Fund to regulatory, political, currency, security, and economic risks specific to the United Kingdom. The United Kingdom has one of the largest economies in Europe, and the United States and other European countries are substantial trading partners of the United Kingdom. As a result, the United Kingdom economy may be impacted by changes to the economic condition of the United States and other European countries. The United Kingdom economy, along with certain other European Union (the "EU") economies, experienced a significant economic slowdown during the recent financial crisis; certain United Kingdom financial institutions suffered significant losses, were severely under-capitalized and required government intervention to survive. Pursuant to the European Referendum Act 2015, a referendum on the United Kingdom's membership of the EU (the "UK's EU Referendum") was held on 23 June 2016 with the majority voting to leave the EU. Whilst the result of the UK's EU Referendum does not bind the UK Government or the UK Parliament to a particular course of action, it is currently expected that the UK Government will exercise its right under Article 50 of the Lisbon Treaty to leave the EU. The timing and the manner of the UK's withdrawal from the EU is currently unknown and may not become clear in the short-term. Whilst the medium- to long-term consequences of the decision to leave the EU remain uncertain, it is expected that there will be a short-term negative impact to the general economic conditions in the UK and business and consumer confidence in the UK, which may in turn have a negative impact elsewhere in the EU and more widely. This may be affected by the length of time it takes for the UK to leave the EU and the terms of any future arrangements the UK has with the remaining member states of the EU. Among other things, the UK's decision to leave the EU could lead to instability in the foreign exchange markets, including volatility in the value of the pound sterling or the euro.

**Tracking Error Risk:** Tracking error is the divergence of the Fund's performance from that of the Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Underlying Index, pricing differences (including differences between a security's price at the local market close and the Fund's valuation of a security at the time of calculation of the Fund's NAV), differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual or the valuation of dividends or interest, tax gains or losses, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Underlying Index does not. ETFs that track indices with significant weight in emerging markets issuers may experience higher tracking error other than other ETFs that do not track such indices.

**Valuation Risk:** The sales price the Fund could receive for a security may differ from the Fund's valuation of the security and may differ from the value used by the Underlying Index, particularly for securities that trade in low value or volatile markets or that are valued using a fair value methodology. The value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

## PERFORMANCE INFORMATION

The bar chart and table that follow show how the Fund performed on a calendar year basis and provide an indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns for the indicated periods compare with the Fund's benchmark index and a broad measure of market performance. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at [www.globalxfunds.com](http://www.globalxfunds.com).

### Annual Total Returns (Years Ended December 31)

**Best Quarter:** 06/30/17 9.70%  
**Worst Quarter:** 06/30/16 -5.16%

### Average Annual Total Returns (for the Periods Ended December 31, 2017)

	Year Ended December 31, 2017	Since Inception (05/12/2015)
<b>Global X Scientific Beta Europe ETF:</b>		
·Return before taxes	31.99%	8.15%
·Return after taxes on distributions <sup>1</sup>	30.71%	7.38%
·Return after taxes on distributions and sale of Fund Shares <sup>1</sup>	19.59%	6.36%
<b>Scientific Beta Extended Developed Europe Multi-Beta Multi-Strategy Equal Risk Contribution Index (net)</b>		
(Index returns reflect invested dividends net of withholding taxes, but reflects no deduction for fees, expenses, or other taxes)	32.27%	8.45%
<b>MSCI EAFE Index (net)</b>		
(Index returns reflect invested dividends net of withholding taxes, but reflects no deduction for fees, expenses, or other taxes)	25.03%	5.21%

<sup>1</sup> After-tax returns are calculated using the historical highest individual U.S. federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown above. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts (IRAs).

## FUND MANAGEMENT

**Investment Adviser:** Global X Management Company LLC.

**Portfolio Managers:** The professionals primarily responsible for the day-to-day management of the Fund are Chang Kim, CFA, James Ong, CFA, Hailey Harris, and Nam To ("Portfolio Managers"). Mr. Kim has been a Portfolio Manager of the Fund since inception. Mr. Ong and Ms. Harris have been Portfolio Managers of the Fund since March 1, 2016. Mr. To has been a Portfolio Manager of the Fund since March 1, 2018.

## PURCHASE AND SALE OF FUND SHARES

Shares of the Fund are listed and traded at market prices on a national securities exchange. Shares may only be purchased and sold on the exchange through a broker-dealer. The price of Shares is based on market price, and because ETF shares trade at market prices rather than at NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). Only "Authorized Participants" (as defined in the SAI) who have entered into agreements with the Fund's distributor, SEI Investments Distribution Co. ("Distributor"), may engage in creation or redemption transactions directly with the Fund. The Fund will only issue or redeem Shares that have been aggregated into blocks of 50,000 Shares or multiples thereof ("Creation Units"). The Fund will issue or redeem Creation Units in return for a basket of cash and/or securities that the Fund specifies any day that the national securities exchanges are open for business ("Business Day").

## TAX INFORMATION

The Fund intends to make distributions that may be taxable to you as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account ("IRA"), in which case distributions from such tax-deferred arrangement, may be taxable to you.

## PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker/dealers or other financial intermediaries (such as a bank) for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing your broker/dealer, sales persons or other intermediary or its employees or associated persons to recommend a Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.
