

The Global X | JPMorgan US Sector Rotator Index ETF seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the JPMorgan U.S. Sector Rotator TR Series X Index

KEY FEATURES

Limit Downside Risk

In volatile or declining markets, the fund will seek to limit downside risk by shifting up to 100% of its assets into short-term treasuries.

Intelligent Participation

A momentum-based sector rotation strategy rebalances monthly, shifting exposure to up to five of the ten eligible US sectors.

Capped Volatility¹

The fund seeks to limit equity volatility to a maximum of 20% by allocating assets to short term treasuries in more unstable markets.

¹Actual volatility may exceed target volatility.

THE CASE

The Global X | JPMorgan US Sector Rotator Index ETF seeks to tactically participate in rising markets through a momentum-based US sector rotation strategy, while defensively shifting up to 100% of its exposure to short-term treasuries in volatile or declining markets.

THE STRATEGY

# of Sectors with Positive Returns	Preliminary Sector Weights					Total Equity Weight	Short Term Treasury Weight
	20%	20%	20%	20%	20%		
5	20%	20%	20%	20%	20%	100%	0%
4	20%	20%	20%	20%		80%	20%
3	20%	20%	20%			60%	40%
2	20%	20%				40%	60%
1	20%					20%	80%
0						0%	100%

Dynamic Rebalancing

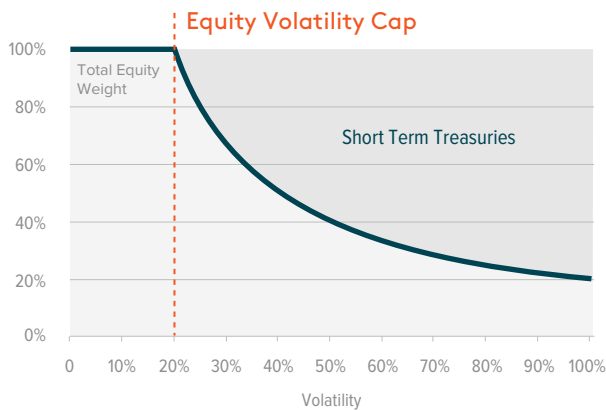

Each month, the index provider calculates the prior month's performance for each of the ten US sectors. The top five performing sectors are selected, with each component initially receiving an equal 20% weighting in the index. If there are only four positive performing sectors, those four sectors are selected and share equal weightings aggregating to 80% of the index, while the remaining 20% is allocated to short term treasury exposure. If there are only three positive performing sectors, 60% is divided equally among the sector components and 40% is allocated to short term treasury exposure. This pattern continues, and if there are no positive performing sectors, 100% of the index weight will be in short term treasury exposure.

Risk Parity

While selected sector components are tentatively assigned a weighting of 20% each, their weights are then adjusted to equalize the volatility contributions of each component. Sectors that exhibited higher volatility in the previous month are scaled down in weight, while those that exhibited lower volatility are scaled up in weight. This allows each sector an equal opportunity to generate top-line returns.

Equity Weight for Given Volatility Level ¹

¹Assumes 5 positive returning sectors in prior month

Volatility¹ Capping

After equalizing the volatility contributions, the sectors in the aggregate must have demonstrated an annualized realized volatility of 20% or lower in the prior month. If their aggregate annualized volatility exceeds this threshold, all sectors are scaled down in weight proportionately, with excess weight allocated to short term treasuries. This seeks to cap volatility at 20%, and to reduce US sector exposure in volatile markets.

UNDER THE HOOD

INDEX² COMPONENT UNIVERSE

The fund efficiently achieves its desired exposures by holding liquid sector and fixed income ETFs.

Sectors	XLY Consumer Discretionary Select Sector SPDR Fund	XLF Financial Select Sector SPDR Fund	XLU Utilities Select Sector SPDR Fund	XLP Consumer Staples Select Sector SPDR Fund	XLV Health Care Select Sector SPDR Fund

¹Volatility is a measurement of the variability of returns. The historical, or “realized,” volatility is calculated from the historical daily returns of the index components over a one-month observation period. For any given day, the “one month annualized volatility” is the annualized standard deviation of the daily returns of the index component using the closing levels of the index during the twenty two index-day period preceding that day.

²JPMorgan U.S. Sector Rotator TR Series X Index: The index aims to participate in the best-performing U.S. sectors of the market while limiting its exposure to the market during periods of high volatility or market declines. The Underlying Index is based on a proprietary methodology from J.P. Morgan Securities LLC.

Investing involves risk, including the possible loss of principal. Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.

In addition to the normal risks associated with investing, narrowly focused investments typically exhibit higher volatility. The Fund is not diversified. Asset allocation may not protect against market risk. Investment in the Fund is subject to the risks of the underlying Funds. There is no assurance or guarantee that the fund’s objective will be achieved or maintained.
