

The Global X Fertilizers/Potash ETF seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Solactive Global Fertilizers/Potash Total Return Index.

KEY FEATURES

Efficient Access

Efficient access to a broad basket of companies involved in fertilizer production.

Targeted Thematic Exposure

The fund is a targeted thematic play on global agriculture.

FOOD SUPPLY CHAIN

Within the agricultural sector, fertilizer producers are the first link in the global food supply chain. Farmers require these nutrients to increase crop yields, and fertilizer companies have become the primary producers of commodities that are critical for global food supply growth. The Global X Fertilizers/Potash ETF offers targeted exposure to fertilizer producers around the world, giving investors access to a critical agricultural industry.

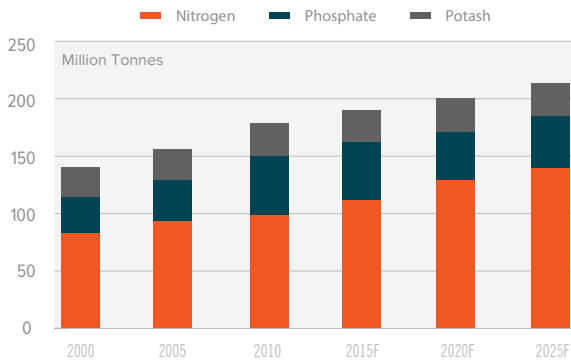

THE CASE

The Global X Fertilizers/Potash ETF offers targeted exposure to fertilizer producers around the world, giving investors access to a critical agricultural industry.

Fertilizer Utilization by Country/Region Source: International Fertilizer Industry Association 2013.

World Fertilizer Consumption Source: Fertecon, CRU, PotashCorp 2014.

Data reported in a combination of fertilizer and calendar years. For example, 2010F is based on 2010 calendar year and 2010/11 fertilizer year data. Estimates start after 2010.

Nutrients for Emerging Markets

- Emerging markets in Asia and Latin America account for almost two-thirds (2/3) of global consumption to support food production for their large and growing populations.
- Global fertilizer consumption is growing fastest in these emerging markets, with the anticipated rate above 3% (Source IFA 2014).
- Global economic growth is predicted to drive food demand (especially high value foods such as meat, fruit and vegetables) in emerging economies, thereby strengthening demand for fertilizers (Food and Agricultural Organization, 2015).
- China and India are the largest fertilizer consuming countries, together accounting for more than 40% of world fertilizer use.
- With 20% of global China is the highest consumer of potash fertilizer. It imports about 55 percent of its potash requirements.

Demand Outpacing Supply

- Demand for grain and oil seeds significantly increased for many years. Oilseed demand has more than doubled and grain demand is up nearly 40 percent over the past two decades.
- As grain areas are converted to vegetable and fruit production to meet higher demand, fertilizer use will increase – the average application rates for the latter are about double those for grain crops.
- Purchasing power growth and the resulting diet shifts in emerging markets are driving crop usage: soybean production in Latin America increased over 300% for the last 20 years, driven by the need for high-protein animal feed and edible cooking oil.
- In China, corn consumption – primarily as animal feed – has grown 125 percent over the last 25 years. (Source: National Geographic)
- In India, grain yields are typically 20%–50% those in the US, with improper fertilization being a key reason for lower yields.

Investing involves risk, including the possible loss of principal. International investing may involve risk of capital loss from unfavorable fluctuations in currency values, from differences in generally accepted accounting principles, or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. Securities in the Fund's portfolio may be significantly subject to the effects of competitive pressures in the fertilizer industry and the price of fertilizer commodities. These prices may fluctuate substantially over short periods of time so the Fund's share price may be more volatile than other types of investments. In addition, fertilizer companies may also be significantly affected by import controls, worldwide competition, liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution control devices.

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' prospectus, which may be obtained by calling 1-888-GX-FUND-1 (1.888.493.8631), or by visiting globalxfunds.com. Read the prospectus carefully before investing.

Global X Management Company, LLC serves as an advisor to the Global X Funds. The Global X Funds are distributed by SEI Investments Distribution Co., One Freedom Valley Drive, Oaks, PA, 19456, which is not affiliated with Global X Management Company or any of its affiliates.

Global X NAVs are calculated using prices as of 4:00 PM Eastern Time. The closing price is the Mid-Point between the Bid and Ask price as of the close of exchange.

Since the Fund's Shares typically do not trade in the secondary market until several days after the Fund's inception, for the period from inception to the first day of secondary market trading in Shares, the NAV of the Fund is used to calculate market returns.

Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.
