

Scientific Beta ETFs

Don't just be smart. Be Scientific.

OVERVIEW

The Global X Scientific Beta ETFs are a family of funds that provide core equity exposure to U.S. and international markets. While preserving the lower costs and transparency of an ETF, the Scientific Beta ETFs may be considered viable alternatives to actively managed funds as they seek to outperform market capitalization weighted indexes by following a methodology rooted in academic research.

SCIU
United States

SCID
Europe

SCIX
Asia ex-Japan

SCIJ
Japan

	Scientific Beta US ETF	Scientific Beta Europe ETF	Scientific Beta Asia ex-Japan ETF	Scientific Beta Japan ETF
Ticker	SCIU	SCID	SCIX	SCIJ
Gross Expense Ratio	0.28%	0.38%	0.38%	0.39%
Net Expense Ratio ¹	0.19%	–	–	–
Number of Potential Components in Starting Universe	500	600	200	300
Geography	United States	Europe	Asia ex-Japan	Japan
Approximate Weight in Global Equity Portfolio ²	50%	25%	4%	8%
Country Exposure	United States	Austria Belgium Denmark Finland France Germany Greece Ireland Italy Netherlands Norway Portugal Spain Sweden Switzerland U.K.	Australia Hong Kong New Zealand Singapore	Japan

¹Pursuant to an Expense Limitation Agreement, the Adviser has agreed to reimburse or waive fees and/or limit Fund expenses to the extent necessary to assure that the operating expenses of the Fund will not exceed 0.19% of the Fund's average daily net assets per year until at least March 1, 2019. Total Annual Fund Operating Expenses apply after Fee Waiver and/or Expense Reimbursement

²Based on weights of each geography in the MSCI All Country World Index.

The Scientific Beta Approach¹

¹Scientific Beta U.S. ETF

²Weighting schemes are defined on the following page.

SMART BETA 2.0

Thirty years of academic and industry research have been incorporated into the Scientific Beta index methodology. The result is a robust methodology that seeks to avoid the pitfalls of other smart beta strategies.

Smart Beta 1.0 Problem	Potential Issue	Scientific Beta Solution
One Factor or Wrong Factor	<ul style="list-style-type: none"> Not diversified versus cyclical nature of factor outperformance Incorrect factor classification of factor leads to non-persistent outperformance versus overall market 	Four academically accepted factors: <ul style="list-style-type: none"> Value Size Low Volatility Momentum
Sophisticated Factor Definitions	Susceptible to data mining as attempts to capture factor exposure are over-analyzed	Basic definitions for each factor: <ul style="list-style-type: none"> Value: Price to Book Size: Market Capitalization Low Volatility: 104-Week historical volatility Momentum: last 52-week total return, excluding most recent month
Single Weighting Scheme	Weighting scheme impacts factor exposures and risks: <ul style="list-style-type: none"> Market Cap: Momentum Factor Bias Equal Weight: Size Factor bias Fundamental/Economic Size: Value Factor Bias 	Incorporates four weighting schemes ¹ to diversify model risk and unwanted risks: <ul style="list-style-type: none"> Maximum Deconcentration Maximum Decorrelation Diversified Risk Weighted Efficient Maximum Sharpe Ratio

¹ Scientific Beta Weighting Schemes:

- Maximum Deconcentration:** Equal weights each component to minimize firm-specific risk.
- Maximum Decorrelation:** Minimizes portfolio volatility based on historical correlations between stocks.
- Diversified Risk Weighted:** Risk parity weighting scheme assigns lower weights to high volatility stocks and higher weights to less volatile stocks.
- Efficient Maximum Sharpe Ratio:** Seeks maximize risk-adjusted performance based on expected returns and volatilities.

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' summary or full prospectus, which may be obtained by calling 1-888-GX-FUND-1 (1.888.493.8631), or by visiting www.globalxfunds.com. Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. In addition to the normal risks associated with investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. The Funds are non-diversified. For the Scientific Beta Japan ETF, the Japanese economy may be subject to considerable degrees of economic, political and social instability, which could have a negative impact on Japanese securities. In addition, Japan is subject to the risk of natural disasters, such as earthquakes, volcanoes, typhoons and tsunamis, which could negatively affect the Fund.

Diversification may not protect against market risk. There is no assurance the goals of the strategy discussed will be met.

Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Global X NAVs are calculated using prices as of 4:00 PM Eastern Time. The closing price is the Mid-Point between the Bid and Ask price as of the close of exchange.
