**Alpha:** Defined as the excess return of a fund relative to a benchmark index.

**Beta:** Measures the volatility of the Fund price relative to the volatility in the market index and can also be defined as the percent change in the price of the Fund given a 1% change in the market index.

Investing involves risk, including the possible loss of principal. In addition to the normal risks associated with investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors, as well as increased volatility and lower trading volume. Narrowly focused investments and investments focusing on a single country may be subject to higher volatility. There are additional risks associated with investing in base and precious metals as well as their respective mining industries. Investments in smaller companies typically exhibit higher volatility.

**Carefully consider the funds' investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the funds' summary or full prospectus, which may be obtained by visiting [globalxfunds.com](http://globalxfunds.com). Please read the prospectus carefully before investing.**
