FUND SUMMARIES

Global X MLP & Energy Infrastructure ETF

Ticker: MLPX Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

The Global X MLP & Energy Infrastructure ETF (“Fund”) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Solactive MLP & Energy Infrastructure Index (“Underlying Index”).

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares (“Shares”) of the Fund. You will also incur usual and customary brokerage commission when buying and selling Shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees:	0.45%
Distribution and Service (12b-1) Fees:	None%
Other Expenses:	0.00%
Total Annual Fund Operating Expenses:	0.45%

Example: The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account customary brokerage commissions that you pay when purchasing or selling Shares of the Fund in the secondary market. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

One Year	Three Years	Five Years	Ten Years
\$46	\$144	\$252	\$567

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the most recent fiscal period, the Fund’s portfolio turnover rate was 40.42% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund invests at least 80% of its total assets in the securities of the Underlying Index. The Fund also invests at least 80% of its total assets in securities of master limited partnerships (“MLPs”) and energy infrastructure corporations. The Fund’s 80% investment policies are non-fundamental and require 60 days prior written notice to shareholders before they can be changed. The Fund may lend securities representing up to one-third of the value of the Fund's total assets (including the value of the collateral received).

The Underlying Index tracks the performance of midstream energy infrastructure MLPs and corporations. Midstream energy infrastructure MLPs and corporations principally own and operate assets used in energy logistics, including, but not limited to, pipelines, storage facilities and other assets used in transporting, storing, gathering, and processing natural gas, natural gas liquids, crude oil or refined products. The Underlying Index limits its exposure to partnerships in order to comply with applicable tax diversification rules. Securities must be publicly traded in the United States. As of January 31, 2018, the Underlying Index was comprised of 38 securities. The Fund’s investment objective and Underlying Index may be changed without shareholder approval.

The Underlying Index is sponsored by Solactive AG, the provider of the Underlying Index (“Index Provider”), which is independent of the Fund and Global X Management Company LLC, the investment adviser for the Fund (“Adviser”). The Index Provider

determines the relative weightings of the securities in the Underlying Index and publishes information regarding the market value of the Underlying Index.

The Adviser will use a “passive” or indexing approach to try to achieve the Fund’s investment objective. Unlike many investment companies, the Fund does not try to outperform the Underlying Index and does not seek temporary defensive positions when markets decline or appear overvalued.

The Fund generally will use a replication strategy. A replication strategy is an indexing strategy that involves investing in the securities of the Underlying Index in approximately the same proportions as in the Underlying Index. However, the Fund may utilize a representative sampling strategy with respect to the Underlying Index when a replication strategy might be detrimental or disadvantageous to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of equity securities to replicate the Underlying Index, in instances in which a security in the Underlying Index becomes temporarily illiquid, unavailable or less liquid, or as a result of legal restrictions or limitations (such as tax diversification requirements) that apply to the Fund but not the Underlying Index.

MLPs, including midstream energy infrastructure MLPs, are publicly traded partnerships engaged in the transportation, storage, processing, refining, marketing, exploration, production, and mining of natural resources. By confining their operations to these specific activities, their interests, or units, are able to trade on public securities exchanges exactly like the shares of a corporation, without entity level taxation.

To qualify as a MLP and not to be taxed as a corporation, a partnership must receive at least 90% of its income from qualifying sources as set forth in Section 7704(d) of the Internal Revenue Code of 1986, as amended (the “Code”). These qualifying sources include interest, dividends, real estate rents, gain from the sale or disposition of real property, income and gain from mineral or natural resources activities, income and gain from the transportation or storage of certain fuels, gain from the sale or disposition of a capital asset held for the production of income described in the foregoing, and, in certain circumstances, income and gain from commodities or futures, forwards and options with respect to commodities.

MLPs generally have two classes of owners, the general partner and limited partners. The general partner of an MLP is typically owned by a major energy company, an investment fund, or the direct management of the MLP, or is an entity owned by one or more of such parties. The general partner may be structured as a private or publicly traded corporation or other entity. The general partner typically controls the operations and management of the MLP through an up to 2% equity interest in the MLP plus, in many cases, ownership of common units and subordinated units. Limited partners typically own the remainder of the partnership, through ownership of common units, and have a limited role in the partnership’s operations and management. MLPs are typically structured such that common units and general partner interests have first priority to receive quarterly cash distributions up to an established minimum amount (“minimum quarterly distributions” or “MQD”). Common and general partner interests also accrue arrearages in distributions to the extent the MQD is not paid. Once common and general partner interests have been paid, subordinated units receive distributions of up to the MQD; however, subordinated units do not accrue arrearages. Distributable cash in excess of the MQD is paid to both common and subordinated units and is distributed to both common and subordinated units generally on a pro rata basis. The general partner is also eligible to receive incentive distributions if the general partner operates the business in a manner which results in distributions paid per common unit surpassing specified target levels. As the general partner increases cash distributions to the limited partners, the general partner receives an increasingly higher percentage of the incremental cash distributions.

The Adviser seeks a correlation over time of 95% or better between the Fund’s performance, before fund fees, expenses and taxes, and the performance of the Underlying Index. A correlation percentage of 100% would indicate perfect correlation. If the Fund uses a replication strategy, it can be expected to have greater correlation to the Underlying Index than if it uses a representative sampling strategy.

The Fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Underlying Index is concentrated. As of January 31, 2018, the Fund was concentrated in the energy sector.

SUMMARY OF PRINCIPAL RISKS

As with any investment, you could lose all or part of your investment in the Fund, and the Fund's performance could trail that of other investments. There is no guarantee that the Fund will achieve its investment objective. The Fund is subject to the principal risks noted below, any of which may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the **Additional Information About the Funds** section of this Prospectus and in the Statement of Additional Information ("SAI").

Asset Class Risk: Securities in the Underlying Index or otherwise held in the Fund's portfolio may underperform in comparison to the general securities markets or other asset classes.

Asset Fluctuation Risk: Certain shareholders, including an Authorized Participant (as defined in the SAI), the Adviser or an affiliate of the Adviser, may own a substantial amount of the Fund's Shares. Additionally, from time to time an Authorized Participant, a third party investor, the Adviser, or an affiliate of the Adviser may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or to allow the Fund to achieve size or scale. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its Shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations, in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on a national securities exchange and may, therefore, have a material upward or downward effect on the market price of the Shares.

Authorized Participant Concentration Risk: The Fund has a limited number of financial institutions that may act as Authorized Participants. Only Authorized Participants who have entered into agreements with the Fund's distributor may engage in creation or redemption transactions directly with the Fund. To the extent that those Authorized Participants exit the business or are unable to process creation and/or redemption orders, and no other Authorized Participant is able to step forward to create or redeem in either of those cases, Shares may be more likely to trade at a premium or discount to NAV, and possibly face trading halts and/or delisting from a securities exchange. The Authorized Participant Concentration Risk may be heightened because the Fund invests in non-U.S. securities.

Commodities Exposure Risk: To the extent that its Underlying Index invests in, or otherwise has exposure to, securities and markets that are susceptible to fluctuations in certain commodity markets, any negative changes in commodity markets could have a great impact on the Fund. Commodity prices may be influenced or characterized by unpredictable factors, including, where applicable, high volatility, changes in supply and demand relationships, weather, agriculture, trade, changes in interest rates and monetary and other governmental policies, action and inaction. Securities of companies held by the Fund that are dependent on a single commodity, or are concentrated on a single commodity sector, may typically exhibit even higher volatility attributable to commodity prices.

Concentration Risk: Because the Fund's investments are concentrated in the energy sector, the Fund will be susceptible to loss due to adverse occurrences affecting this sector or industry. To the extent that the Underlying Index concentrates in the securities of issuers in a particular country, industry, market, asset class, or sector, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in a country, industry, market, asset class, or sector, the Fund faces more risks than if it were diversified broadly over numerous countries, industries, markets, asset classes, or sectors. Such risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand; competition for resources; adverse labor relations; political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in a sector or industry. In addition, at times, such country, industry, market, asset class, or sector may be out of favor and underperform other sectors or industries or the market as a whole. For additional details on these risks, please see **Risks Related to Investing in the Energy Sector**.

Cyber Security Risk: Failures or breaches of the electronic systems of the Fund, the Adviser, and the Fund's other service providers, market makers, Authorized Participants or the issuers of securities in which the Fund invests have the ability to cause disruptions and negatively impact the Fund's business operations, potentially resulting in financial losses to the Fund and its shareholders. While the Fund has established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Furthermore, the Fund cannot control the cyber security plans and systems of the Fund's service providers, market makers, Authorized Participants or issuers of securities in which the Fund invests.

Equity Securities Risk: Equity securities are subject to changes in value and their values may be more volatile than other asset classes, as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Foreign Securities Risk: The Fund's investments in foreign securities can be riskier than U.S. securities investments. Investments in the securities of foreign issuers (including investments in ADRs and GDRs) are subject to the risks associated with investing in those foreign markets, such as heightened risks of inflation or nationalization. The prices of foreign securities and the prices of U.S. securities have, at times, moved in opposite directions. In addition, securities of foreign issuers may lose value due to political, economic and geographic events affecting a foreign issuer or market. During periods of social, political or economic instability in a country or region, the value of a foreign security traded on U.S. exchanges could be affected by, among other things, increasing

price volatility, illiquidity, or the closure of the primary market on which the security (or the security underlying the ADR or GDR) is traded. You may lose money due to political, economic and geographic events affecting a foreign issuer or market.

Index-Related Risk: There is no guarantee that the Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders.

Industry Specific Risk: MLPs operating in the energy sector are also subject to risks specific to the industry they serve.

Midstream. Midstream MLPs that provide crude oil, refined product and natural gas services are subject to supply and demand fluctuations in the markets they serve, which may be impacted by a wide range of factors, including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, increasing operating expenses and economic conditions, among others.

Marine shipping. Marine shipping MLPs are primarily marine transporters of natural gas, crude oil or refined petroleum products. Marine shipping companies are exposed to many of the same risks as other energy companies. The highly cyclical nature of the marine transportation industry may lead to volatile changes in charter rates and vessel values, which may adversely affect the revenues, profitability and cash flows of MLPs with marine transportation assets.

International Closed Market Trading Risk: To the extent that the underlying securities held by the Fund trade on foreign exchanges that may be closed when the securities exchange on which the Fund's Shares trade is open, there are likely to be deviations between the current price of such an underlying security and the last quoted price for the underlying security (i.e., the Fund's quote from the closed foreign market). These deviations could result in premiums or discounts to the Fund's NAV that may be greater than those experienced by other exchange-traded funds ("ETFs").

Investable Universe of Companies Risk: The investable universe of companies in which the Fund may invest may be limited. If a company no longer meets the Index Provider's criteria for inclusion in the Underlying Index, the Fund may need to reduce or eliminate its holdings in that company. The reduction or elimination of the Fund's holdings in the company may have an adverse impact on the liquidity of the Fund's overall portfolio holdings and on Fund performance.

Issuer Risk: Fund performance depends on the performance of individual companies in which the Fund invests. Changes to the financial condition of any of those companies may cause the value of their securities to decline.

Large-Capitalization Companies Risk: Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

Liquidity Risk: Certain securities of MLPs may trade less frequently than those of larger companies due to their smaller capitalizations.

Listing Standards Risk: Under new continuous listing standards adopted by the Fund's listing exchange, the Fund will be required to confirm on an ongoing basis that the components of the Underlying Index satisfy the applicable listing requirements. In the event that the Underlying Index does not comply with the applicable listing requirements, the Fund would be required to rectify such non-compliance by requesting that the Index Provider modify the Underlying Index, adopting a new underlying index, or obtaining relief from the SEC. Failure to rectify such non-compliance may result in the Fund being delisted by the listing exchange.

Management Risk: The Fund is subject to the risk that the Adviser's investment management strategy may cause the Fund to underperform the market or its relevant benchmark or adversely affect the ability of the Fund to achieve its investment objective.

Market Risk: Turbulence in the financial markets and reduced liquidity may negatively affect issuers, which could have an adverse effect on the Fund. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, or other government actors, which could include increasing interest rates, could cause increased volatility in financial markets and lead to higher levels of Fund redemptions, which could have a negative impact on the Fund. The Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns.

Market Trading Risk: Shares of the Fund are publicly traded on a national securities exchange, which may subject shareholders to numerous market trading risks, including the potential lack of an active market for Shares, losses from trading in secondary markets, periods of high volatility and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to NAV.

Mid-Capitalization Companies Risk: Mid-capitalization companies may have greater price volatility, lower trading volume and less liquidity than large-capitalization companies. In addition, mid-capitalization companies may have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies.

MLP Risk: Investments in securities of an MLP involve risks that differ from investments in common stock, including risks related to limited control and limited rights to vote on matters affecting the MLP, risks related to potential conflicts of interest between the MLP and the MLP's general partner, and cash flow risks. MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). Prices of common units of individual MLPs and other equity securities also can be affected by fundamentals unique to the partnership or company, including earnings power and coverage ratios.

Non-Diversification Risk: The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940 ("1940 Act"). As a result, the Fund is subject to the risk that it may be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Operational Risk: The Fund is exposed to operational risk arising from a number of factors, including but not limited to human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Passive Investment Risk: The Fund is not actively managed and the Adviser does not attempt to take defensive positions in declining markets. Unlike many investment companies, the Fund does not seek to outperform its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund's return to be lower than if the Fund employed an active strategy.

Potential Substantial After-Tax Tracking Error From Index Performance Risk: The Fund will be subject to taxation on its taxable income. The NAV of Shares will also be reduced by the accrual of any deferred tax liabilities. The Underlying Index, however, is calculated without any deductions for taxes. As a result, the Fund's performance could differ significantly from the Underlying Index even if the pretax performance of the Fund and the performance of the Underlying Index are closely correlated. The performance of the Fund may diverge from that of the Underlying Index.

Premium/Discount Risk: Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risk of Investing in Canada: The Canadian economy is highly dependent on the demand for and price of natural resources. As a result, the Canadian market is relatively concentrated in issuers involved in the production and distribution of natural resources and any changes in these sectors could have an adverse impact on the Canadian economy.

Risks Related to Investing in the Energy Infrastructure Industry Sector: The Fund invests primarily in energy infrastructure companies. Energy infrastructure companies are subject to risks specific to the industry they serve, including, but not limited to, the following:

- reduced volumes of natural gas or other energy commodities available for transporting, processing or storing;
- new construction and acquisition risk, which can limit growth potential;

- a sustained reduced demand for crude oil, natural gas and refined petroleum products resulting from a recession or an increase in market price or higher taxes;
- changes in the regulatory environment;
- extreme weather;
- rising interest rates, which could result in a higher cost of capital and drive investors into other investment opportunities; and
- threats of attack by terrorists.

Risks Related to Investing in the Energy Sector: The value of securities issued by companies in the energy sector may decline for many reasons, including, without limitation, changes in energy prices; international politics; energy conservation; the success of exploration projects; natural disasters or other catastrophes; changes in exchange rates, interest rates, or economic conditions; changes in demand for energy products and services; and tax and other government regulatory policies.

Securities Lending Risk: Securities lending involves a risk of loss because the borrower may fail to return the securities in a timely manner or at all. If the Fund is not able to recover the securities loaned, it may sell the collateral and purchase a replacement security in the market. Lending securities entails a risk of loss to the Fund if and to the extent that the market value of the loaned securities increases and the collateral is not increased accordingly. Additionally, the Fund will bear any loss on the investment of cash collateral it receives. These events could also trigger adverse tax consequences for the Fund. As securities on loan may not be voted by the Fund, there is a risk that the Fund may not be able to recall the securities in sufficient time to vote on material proxy matters.

Tax Risks: Tax risks associated with investments in the Fund include, but are not limited to, the following:

MLP Tax Risk. MLPs do not pay U.S. federal income tax at the partnership level. Rather, each partner is allocated a share of the partnership's income, gains, losses, deductions and expenses. A change in current tax law, or a change in the underlying business mix of a given MLP, could result in an MLP being treated as a corporation for U.S. federal income tax purposes, which would result in such MLP being required to pay U.S. federal income tax on its taxable income. The classification of an MLP as a corporation for U.S. federal income tax purposes would have the effect of reducing the amount of cash available for distribution by the MLP. Thus, if any of the MLPs owned by the Fund were treated as corporations for U.S. federal income tax purposes, it could result in a reduction in the value of your investment in the Fund and lower income.

Return of Capital Distributions From the Fund Reduce the Tax Basis of Fund Shares. A portion of the Fund's distributions are expected to be treated as a return of capital for tax purposes. Return of capital distributions are not taxable income to you, but reduce your tax basis in your Fund Shares. Such a reduction in tax basis will result in larger taxable gains and/or lower tax losses on a subsequent sale of Fund Shares. Shareholders who sell their Shares for less than they bought them may still recognize a gain due to the reduction in tax basis. Shareholders who periodically receive the payment of dividends or other distributions consisting of a return of capital may be under the impression that they are receiving net profits from the Fund when, in fact, they are not. Shareholders should not assume that the source of the distributions is from the net profits of the Fund. To the extent that the distributions paid to you constitute a return of capital, the Fund's assets will decline. A decline in the Fund's assets may also result in an increase in the portion of a Fund's expense ratio that is not subject to a unitary fee or any other form of contractual cap, and over time the distributions paid in excess of net distributions received could work to erode the Fund's net asset value.

Tracking Error Risk: Tracking error is the divergence of the Fund's performance from that of the Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Underlying Index, pricing differences (including differences between a security's price at the local market close and the Fund's valuation of a security at the time of calculation of the Fund's NAV), differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Underlying Index does not. ETFs that track indices with significant weight in emerging markets issuers may experience higher tracking error than other index ETFs that do not track such indices.

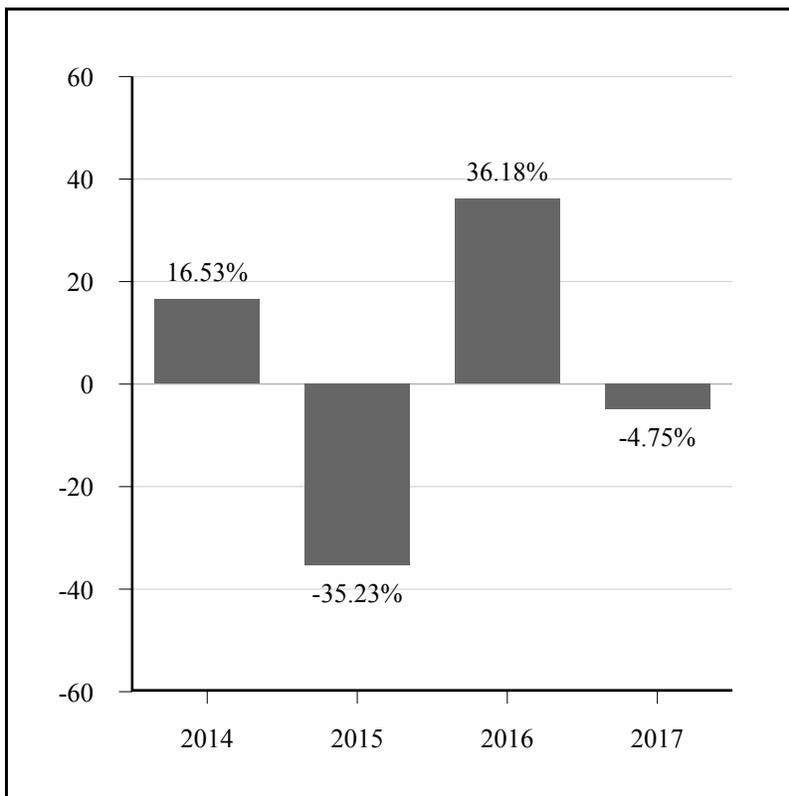

Trading Halt Risk: An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

U.S. Economic Risk: Decreasing U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates, a recession in the United States or increases in foreclosures rates may have an adverse impact on the Fund.

PERFORMANCE INFORMATION

The bar chart and table that follow show how the Fund performed on a calendar year basis and provide an indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing the Fund's average annual total returns for the indicated periods compared with the Fund's benchmark index and a broad measure of market performance. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.globalxfunds.com.

Annual Total Returns (Years Ended December 31)

Best Quarter: 06/30/16 21.72%
Worst Quarter: 09/30/15 -23.51%

Average Annual Total Returns (for the Periods Ended December 31, 2017)

	One Year Ended December 31, 2017	Since Inception (08/06/2013)
Global X MLP & Energy Infrastructure ETF:		
·Return before taxes	-4.75%	1.46%
·Return after taxes on distributions ¹	-5.78%	0.38%
·Return after taxes on distributions and sale of Fund Shares ¹	-2.36%	0.66%
Solactive MLP & Energy Infrastructure Index (net) (Index returns reflects invested dividends net of withholding taxes, but reflects no deduction for fees, expenses, or other taxes)	-3.98%	2.14%
S&P 500 Index (Index returns do not reflect deduction for fees, expenses, or taxes)	21.83%	13.21%

¹ After-tax returns are calculated using the historical highest individual U.S. federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown above. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts ("IRAs").

FUND MANAGEMENT

Investment Adviser: Global X Management Company LLC.

Portfolio Managers: The professionals primarily responsible for the day-to-day management of the Fund are Chang Kim, CFA, James Ong, CFA, and Nam To ("Portfolio Managers"). Mr. Kim has been Portfolio Manager of the Fund since February 15, 2014. Mr. Ong has been Portfolio Manager of the Fund since March 1, 2016. Mr. To has been Portfolio Manager of the Fund since March 1, 2018.

PURCHASE AND SALE OF FUND SHARES

Shares of the Fund are listed and traded at market prices on a national securities exchange. Shares may only be purchased and sold on the exchange through a broker-dealer. The price of Shares is based on market price, and because ETF shares trade at market prices rather than at NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). Only "Authorized Participants" (as defined in the SAI) who have entered into agreements with the Fund's distributor, SEI Investments Distribution Co. ("Distributor"), may engage in creation or redemption transactions directly with the Fund. The Fund will only issue or redeem Shares that have been aggregated into blocks of 50,000 Shares or multiples thereof ("Creation Units"). The Fund will issue or redeem Creation Units in return for a basket of cash and/or securities that the Fund specifies any day that national securities exchanges are open for business ("Business Day").

TAX INFORMATION

The Fund intends to make distributions that may be taxable to you as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an IRA, in which case distributions from such tax-deferred arrangement may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer, sales persons or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.

Global X SuperDividend® Alternatives ETF

Ticker: ALTY Exchange: NASDAQ

INVESTMENT OBJECTIVE

The Global X SuperDividend® Alternatives ETF (“Fund”) seeks to track, before fees and expenses, the price and yield performance of the Indxx SuperDividend® Alternatives Index (“Underlying Index”).

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares (“Shares”) of the Fund. You will also incur usual and customary brokerage commission when buying and selling Shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees:	0.75%
Distribution and Service (12b-1) Fees:	None%
Other Expenses:	0.00%
Acquired Fund Fees and Expenses: ¹	2.09%
Total Annual Fund Operating Expenses:	2.84%

¹ “Acquired Fund Fees and Expenses” sets forth the Fund’s pro rata portion of the cumulative expenses charged by the exchange-traded funds, closed-end funds, business development companies and other investment companies in which the Fund invests. These expenses are calculated based on the Fund’s portfolio holdings during the prior fiscal period. The actual Acquired Fund Fees and Expenses will vary with changes in the allocations of the Fund’s assets.

Example: The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account customary brokerage commissions that you pay when purchasing or selling Shares of the Fund in the secondary market. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

One Year	Three Years	Five Years	Ten Years
\$287	\$880	\$1,499	\$3,166

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the most recent fiscal period, the Fund’s portfolio turnover rate was 34.84% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund invests at least 80% of its total assets in the securities of the Underlying Index and in American Depositary Receipts (“ADRs”) and Global Depositary Receipts (“GDRs”) based on the securities in the Underlying Index. The Fund’s 80% investment policy is non-fundamental and requires 60 days prior written notice to shareholders before it can be changed.

The Underlying Index is comprised of securities that rank among the highest dividend-yielding securities in each eligible category of alternative income investments, at the time of Underlying Index reconstitution, as defined by the Index Provider (as defined below). Alternative income investments that are eligible for inclusion in the Underlying Index fall into one of four classes: Master Limited Partnerships (“MLPs”) and Infrastructure, Real Estate, Institutional Managers, and Fixed Income and Derivative Strategies. The MLPs and Infrastructure categories primarily consist of units of MLPs and shares of infrastructure companies. The Real Estate category provides exposure to global real estate investment trusts (“REITs”), and gains this exposure through investing directly in the Global X SuperDividend® REIT ETF. The Institutional Managers category primarily consists of shares of business

development companies (“BDCs”) and publicly listed private equity companies. The Fixed Income and Derivative Strategies category includes exposure to emerging market debt, mortgage and asset-backed securities, and option-writing primarily through the purchase of publicly traded closed-end funds (“CEFs”). Each of the Underlying Index components is selected from a universe of securities that are publicly traded in the United States. The Underlying Index assigns weights to each of the four categories in a method that seeks to equalize the volatility contribution of each category, which assigns less weight to higher volatility categories and more weight to lower volatility categories. The Underlying Index is reconstituted annually, but may rebalance quarterly if any one category deviates more than 3% from its target weight. The Fund's investment objective and Underlying Index may be changed without shareholder approval.

The Underlying Index is sponsored by an organization (“Index Provider”) that is independent of the Fund and Global X Management Company LLC, the investment adviser for the Fund (“Adviser”). The Index Provider determines the relative weightings of the securities in the Underlying Index and publishes information regarding the market value of the Underlying Index. The Fund's Index Provider is Indxx, LLC.

The Adviser uses a “passive” or indexing approach to try to achieve the Fund's investment objective. Unlike many investment companies, the Fund does not try to “outperform” the Underlying Index and does not seek temporary defensive positions when markets decline or appear overvalued.

The Fund generally will use a replication strategy. A replication strategy is an indexing strategy that involves investing in the securities of the Underlying Index in approximately the same proportions as in the Underlying Index. However, the Fund may utilize a representative sampling strategy with respect to the Underlying Index when a replication strategy might be detrimental to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of equity securities to follow the Underlying Index, in instances in which a security in the Underlying Index becomes temporarily illiquid, unavailable or less liquid, or as a result of legal restrictions or limitations (such as tax diversification requirements) that apply to the Fund but not the Underlying Index.

The Adviser expects that, over time, the correlation between the Fund's performance and that of the Underlying Index, before fees and expenses, will exceed 95%. A correlation percentage of 100% would indicate perfect correlation. If the Fund uses a replication strategy, it can be expected to have greater correlation to the Underlying Index than if it uses a representative sampling strategy.

The Fund concentrates its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Underlying Index is concentrated. As of January 31, 2018, the Underlying Index was concentrated in the financials sector.

SUMMARY OF PRINCIPAL RISKS

As with any investment, you could lose all or part of your investment in the Fund, and the Fund's performance could trail that of other investments. The Fund is subject to the principal risks noted below, any of which may adversely affect the Fund's net asset value (“NAV”), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the **Additional Information About the Funds** section of this Prospectus and in the Statement of Additional Information (“SAI”).

Asset Class Risk: Securities in the Underlying Index or otherwise held in the Fund's portfolio may underperform in comparison to the general securities markets or other asset classes.

Asset Fluctuation Risk: Certain shareholders, including an Authorized Participant (as defined in the SAI), the Adviser or an affiliate of the Adviser, may own a substantial amount of the Fund's Shares. Additionally, from time to time an Authorized Participant, a third party investor, the Adviser, or an affiliate of the Adviser may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or to allow the Fund to achieve size or scale. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its Shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations, in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on a national securities exchange and may, therefore, have a material upward or downward effect on the market price of the Shares.

Authorized Participant Concentration Risk: The Fund has a limited number of financial institutions that may act as Authorized Participants. Only Authorized Participants who have entered into agreements with the Fund's distributor may engage in creation or redemption transactions directly with the Fund. To the extent that those Authorized Participants exit the business or are unable to process creation and/or redemption orders, and no other Authorized Participant is able to step forward to create or redeem in

either of those cases, Shares may be more likely to trade at a premium or discount to NAV, and possibly face trading halts and/or delisting from a securities exchange. The Authorized Participant Concentration Risk may be heightened because the Fund invests in non-U.S. securities.

BDC Risk: BDCs may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder and they may trade in the market at a discount to their NAV. BDCs usually trade at a discount to their NAV because they invest in unlisted securities and have limited access to capital markets. The Fund will indirectly bear its pro rata share of the fees and expenses incurred by a BDC it invests in, including advisory fees.

Commodities Exposure Risk: To the extent that its Underlying Index invests in, or otherwise has exposure to, securities and markets that are susceptible to fluctuations in certain commodity markets, any negative changes in commodity markets could have a great impact on the Fund. Commodity prices may be influenced or characterized by unpredictable factors, including, where applicable, high volatility, changes in supply and demand relationships, weather, agriculture, trade, changes in interest rates and monetary and other governmental policies, action and inaction. Securities of companies held by the Fund that are dependent on a single commodity, or are concentrated on a single commodity sector, may typically exhibit even higher volatility attributable to commodity prices.

Concentration Risk: Because the Fund's investments are concentrated in the financials sector, the Fund will be susceptible to loss due to adverse occurrences affecting this sector or industry. To the extent that the Underlying Index concentrates in the securities of issuers in a particular country, industry, market, asset class, or sector, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in a country, industry, market, asset class, or sector, the Fund faces more risks than if it were diversified broadly over numerous countries, industries, markets, asset classes, or sectors. Such risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand; competition for resources; adverse labor relations; political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in a sector or industry. In addition, at times, such country, industry, market, asset class, or sector may be out of favor and underperform other sectors or industries or the market as a whole. For additional details on these risks, please see **Risks Related to Investing in the Financials Sector**.

Credit Risk: Credit risk is the risk that an issuer of debt securities will be unable to pay principal and interest when due, or that the value of the security will suffer because investors believe the issuer is less able to make required principal and interest payments.

Currency Risk: Because the Fund's NAV is determined in U.S. dollars, the Fund's NAV could decline if a relevant foreign currency depreciates against the U.S. dollar or if there are delays or limits on repatriation of such currency. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the Fund's NAV may change quickly and without warning, which could have a significant negative impact on the Fund.

Custody Risk: Less developed markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by local banks, agents and depositories.

Cyber Security Risk: Failures or breaches of the electronic systems of the Fund, the Adviser, and the Fund's other service providers, market makers, Authorized Participants or the issuers of securities in which the Fund invests have the ability to cause disruptions and negatively impact the Fund's business operations, potentially resulting in financial losses to the Fund and its shareholders. While the Fund has established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Furthermore, the Fund cannot control the cyber security plans and systems of the Fund's service providers, market makers, Authorized Participants or issuers of securities in which the Fund invests.

Emerging Market Risk: The Fund is expected to invest in securities in emerging market countries. The Fund's investment in an emerging market country may be subject to a greater risk of loss than investments in developed markets. Securities markets of emerging market countries are less liquid, subject to greater price volatility, have smaller market capitalizations, have less government regulation, and are not subject to as extensive and frequent accounting, financial, and other reporting requirements as the securities markets of more developed countries. Because certain securities markets in the emerging market countries in which the Fund may invest are small in size, underdeveloped and are less regulated and less correlated to global economic cycles than those markets located in more developed countries, the securities markets in such countries are subject to greater risks associated with market volatility, lower market capitalization, lower trading volume, illiquidity, inflation, greater price fluctuations and uncertainty regarding the existence of trading markets.

Equity Securities Risk: Equity securities are subject to changes in value and their values may be more volatile than other asset classes, as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Foreign Financial Institution Risk: Certain of the securities that comprise the Underlying Index, while traded on U.S. exchanges, may be issued by foreign financial institutions. Therefore, the Fund may be subject to the risks of investing in securities issued by foreign companies, which may not be subject to the same regulations as companies domiciled in the United States. The health of many foreign financial institutions is often tied closely with the financial stability of the local economy in which they are domiciled, and therefore are subject to additional risks including but not limited to: policy changes, slow economic growth, and high levels of debt.

Foreign Securities Risk: The Fund's investments in foreign securities can be riskier than U.S. securities investments. Investments in the securities of foreign issuers (including investments in ADRs and GDRs) are subject to the risks associated with investing in those foreign markets, such as heightened risks of inflation or nationalization. The prices of foreign securities and the prices of U.S. securities have, at times, moved in opposite directions. In addition, securities of foreign issuers may lose value due to political, economic and geographic events affecting a foreign issuer or market. During periods of social, political or economic instability in a country or region, the value of a foreign security traded on U.S. exchanges could be affected by, among other things, increasing price volatility, illiquidity, or the closure of the primary market on which the security (or the security underlying the ADR or GDR) is traded. You may lose money due to political, economic and geographic events affecting a foreign issuer or market.

Geographic Risk: A natural or other disaster could occur in a geographic region in which the Fund invests, which could affect the economy or particular business operations of companies in the specific geographic region, causing an adverse impact on the Fund's investments in the affected region or in a region economically tied to the affected region.

High Dividend Yield Stocks Risk: High yielding stocks are often speculative, high risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund's performance.

High Yield Securities Risk: Securities that are rated below investment grade (commonly referred to as "junk bonds," including those bonds rated lower than "BBB" by Standard & Poor's[®] (a division of the McGraw-Hill Companies, Inc.) ("S&P") and Fitch, Inc. ("Fitch"), "Baa3" by Moody's[®] Investors Service, Inc. ("Moody's"), or "BBBL" by Dominion Bond Rating Service Limited ("Dominion")), or are unrated but judged by the Adviser to be of comparable quality, at the time of purchase, may be more volatile than higher-rated securities of similar maturity.

Income Risk: Income risk is the risk that the Fund's income will decline because of falling interest rates.

Index-Related Risk: There is no guarantee that the Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders.

Interest Rate Risk: Interest rate risk is the risk that prices of fixed income securities generally increase when interest rates decline and decrease when interest rates increase. The Fund may lose money if short-term or long-term interest rates rise sharply.

International Closed Market Trading Risk: To the extent that the underlying securities held by the Fund trade on foreign exchanges that may be closed when the securities exchange on which the Fund's Shares trade is open, there are likely to be deviations between the current price of such an underlying security and the last quoted price for the underlying security (i.e., the Fund's quote from the closed foreign market). These deviations could result in premiums or discounts to the Fund's NAV that may be greater than those experienced by other exchange-traded funds ("ETFs").

Investment Company Risk: The risks of investment in investment companies, such as CEFs and BDCs, typically reflect the risks of the types of instruments in which the investment companies invest. By investing in another investment company, the Fund becomes a shareholder of that investment company and bears its proportionate share of the fees and expenses of the other investment company.

Issuer Risk: Fund performance depends on the performance of individual companies in which the Fund invests. Changes to the financial condition of any of those companies may cause the value of their securities to decline.

Large-Capitalization Companies Risk: Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

Liquidity Risk: Liquidity risk is the risk that the Fund may not be able to sell a security in a timely manner at a desired price.

Listing Standards Risk: Under new continuous listing standards adopted by the Fund's listing exchange, the Fund will be required to confirm on an ongoing basis that the components of the Underlying Index satisfy the applicable listing requirements. In the event that the Underlying Index does not comply with the applicable listing requirements, the Fund would be required to rectify such non-compliance by requesting that the Index Provider modify the Underlying Index, adopting a new underlying index, or obtaining relief from the SEC. Failure to rectify such non-compliance may result in the Fund being delisted by the listing exchange.

Management Risk: The Fund is subject to the risk that the Adviser's investment management strategy may cause the Fund to underperform the market or its relevant benchmark or adversely affect the ability of the Fund to achieve its investment objective.

Market Risk: Turbulence in the financial markets and reduced liquidity may negatively affect issuers, which could have an adverse effect on the Fund. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, or other government actors, which could include increasing interest rates, could cause increased volatility in financial markets and lead to higher levels of Fund redemptions, which could have a negative impact on the Fund. The Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns.

Market Trading Risk: Shares of the Fund are publicly traded on a national securities exchange, which may subject shareholders to numerous market trading risks, including the potential lack of an active market for Shares, losses from trading in secondary markets, periods of high volatility and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to NAV.

Mid-Capitalization Companies Risk: Mid-capitalization companies may have greater price volatility, lower trading volume and less liquidity than large-capitalization companies. In addition, mid-capitalization companies may have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies.

MLP Risk: Investments in securities of an MLP involve risks that differ from investments in common stock, including risks related to limited control and limited rights to vote on matters affecting the MLP, risks related to potential conflicts of interest between the MLP and the MLP's general partner, and cash flow risks. MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). Prices of common units of individual MLPs and other equity securities also can be affected by fundamentals unique to the partnership or company, including earnings power and coverage ratios.

Non-Diversification Risk: The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940 ("1940 Act"). As a result, the Fund is subject to the risk that it may be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Operational Risk: The Fund is exposed to operational risk arising from a number of factors, including but not limited to human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Passive Foreign Investment Company Risk: Some Fund holdings may be characterized as "passive foreign investment companies" ("PFICs") for U.S. tax purposes. Because the application of the PFIC rules may affect, among other things, the character of gains and the amount of gain or loss and the timing of the recognition of income with respect to PFIC shares, and may subject the Fund itself to tax on certain income from PFIC shares, the amount that must be distributed to shareholders and will be taxed to shareholders as ordinary income or long-term capital gain may be increased or decreased substantially as compared to a fund that did not invest in PFIC shares.

Passive Investment Risk: The Fund is not actively managed and the Adviser does not attempt to take defensive positions in declining markets. Unlike many investment companies, the Fund does not seek to outperform its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund's return to be lower than if the Fund employed an active strategy.

Premium/Discount Risk: Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risks Related to Exposure to Non-Hedging Foreign Currency Trading: Certain of the Underlying Index constituents may engage in forward foreign currency transactions for speculative purposes. The Underlying Index constituents' advisors may purchase or sell foreign currencies through the use of forward contracts based on the applicable advisors' judgment regarding the direction of the market for a particular foreign currency or currencies. In pursuing this strategy, the advisors seek to profit from anticipated movements in currency rates by establishing "long" and/or "short" positions in forward contracts on various foreign currencies. Foreign exchange rates can be extremely volatile and a variance in the degree of volatility of the market or in the direction of the market from the advisors' expectations may produce significant losses to the Underlying Index constituent.

Risks Related to Exposure to Option Trading Strategies: Options are generally subject to volatile swings in price based on changes in value of the underlying instrument, and the options written by an Underlying Index constituent may be particularly subject to this risk because of the volatility of the underlying stocks selected by an Underlying Index constituent. An Underlying Index constituent may incur a form of economic leverage through its use of options, which will increase the volatility of an Underlying Index constituent's returns and may increase the risk of loss to an Underlying Index constituent. While an Underlying Index constituent will collect premiums on the options it writes, an Underlying Index constituent's risk of loss if one or more of its options is exercised and expires in-the-money may substantially outweigh the gains to an Underlying Index constituent from the receipt of such option premiums. Moreover, the options sold by an Underlying Index constituent may have imperfect correlation to the returns of their underlying stocks.

Risks Related to Investing in Actively Managed Portfolios: Certain of the Underlying Index constituents are actively managed portfolios, and their success depends upon the investment skills and analytical abilities of the investment adviser to that constituent to develop and effectively implement strategies to achieve the Underlying Index constituent's investment objective. Subjective decisions made by the investment adviser may cause the Underlying Index constituent to incur losses or to miss profit opportunities on which it may otherwise have capitalized.

Risks Related to Investing in Bonds: Investments in debt securities are generally affected by changes in prevailing interest rates and the creditworthiness of the issuer. Prices of debt securities fall when prevailing interest rates rise. The Fund's yield on investments in debt securities will fluctuate as the securities in the Fund are rebalanced and reinvested in securities with different interest rates. Investments in bonds are also subject to credit risk. Credit risk is the risk that an issuer of debt securities will be unable to pay principal and interest when due, or that the value of the security will suffer because investors believe the issuer is less able to make required principal and interest payments. This is broadly gauged by the credit ratings of the debt securities in which the Fund invests. However, credit ratings are only the opinions of the rating agencies issuing them, do not purport to reflect the risk of fluctuations in market value and are not absolute guarantees as to the payment of interest and the repayment of principal.

Risks Related to Investing in Closed-End Funds: Common shares of CEFs frequently trade at a discount from their NAVs. This risk may be greater if shares of such CEFs are removed from the Underlying Index in a relatively short period of time after completion of the initial offering of such CEFs.

Risks Related to Investing in ETFs: The Fund may hold ETFs to gain exposure to certain asset classes. As a result, the Fund may be subject to the same risks as the underlying ETFs. While the risks of owning shares of an underlying ETF generally reflect the risks of owning the underlying securities of the index the ETF is designed to track, lack of liquidity in an underlying ETF can result in its value being more volatile than the underlying portfolio securities. Because the value of other ETF shares depends on the demand in the market, the Adviser may not be able to liquidate the Fund's holdings in those shares at the most optimal time, thereby adversely affecting the Fund's performance. In addition, ETF shares may trade at a premium or discount to NAV.

Risks Related to Investing in Exchange Traded Notes ("ETNs"): The Fund may hold ETNs to gain exposure to certain asset classes. As a result, the Fund may be subject to the same risks as the underlying ETNs. An ETN may trade at a premium or discount to its NAV. The Fund will indirectly bear its pro rata share of the fees and expenses incurred by an ETN it invests in, including advisory fees, and will pay brokerage commissions in connection with the purchase and sale of shares of ETNs. ETNs that invest

in commodities may be, or may become, subject to regulatory trading limits that could hurt the value of their securities and could affect the Fund's ability to pursue its investment program as described in this Prospectus. The value of an ETN may also differ from the valuation of its reference market due to changes in the issuer's credit rating, and any payments on an ETN by an issuer is subject to the issuer's ability to pay its obligations as they become due.

Risks Related to Investing in Leveraged Portfolios: Certain of the Underlying Index components may engage in transactions that give rise to leverage. Such transactions may include, among others, reverse repurchase agreements, securities lending, forward commitment transactions, short sales and certain derivative transactions. The use of leverage may cause the Underlying Index components to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations or to meet segregation requirements. Leverage may cause the Underlying Index component's share price to be more volatile than if it had not been leveraged, as certain types of leverage may exaggerate the effect of any increase or decrease in the value of the Underlying Index component's portfolio securities. The loss on leveraged investments may substantially exceed the initial investment.

Risks Related to Investing in Listed Private Equity Companies: There are certain risks inherent in investing in listed private equity companies, which encompass BDCs and other financial institutions or vehicles whose principal business is to invest in and lend capital to, or provide services to privately held companies. The 1940 Act imposes certain restraints upon the operations of a BDC. For example, BDCs are required to invest at least 70% of their total assets primarily in securities of private companies or thinly traded U.S. public companies, cash, cash equivalents, U.S. government securities and high quality debt investments that mature in one year or less. Generally, little public information exists for private and thinly traded companies, and there is a risk that investors may not be able to make a fully informed investment decision. With investments in debt instruments, there is a risk that the issuer may default on its payments or declare bankruptcy. Additionally, a BDC may incur indebtedness only in amounts such that the BDC's asset coverage equals at least 200% after such incurrence. These limitations on asset mix and leverage may prohibit the way that the BDC raises capital. BDCs generally invest in less mature private companies, which involve greater risk than well-established, publicly-traded companies.

Risks Related to Investing in the Financials Sector: Performance of companies in the financials sector may be adversely impacted by many factors, including, among others, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. This sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted.

Risks Related to Investing in the Infrastructure Industry: Companies in the infrastructure industry may be subject to a variety of factors that could adversely affect their business or operations, including high interest costs in connection with capital construction programs, high degrees of leverage, costs associated with governmental, environmental and other regulations, the level of government spending on infrastructure projects, and other factors. The stock prices of transportation companies may be affected by supply and demand for their specific product, government regulation, world events and economic conditions. The profitability of energy companies is related to worldwide energy prices, exploration, and production spending. Utility companies face intense competition, which may have an adverse effect on their profit margins, and the rates charged by regulated utility companies are subject to review and limitation by governmental regulatory commissions.

Short Sale Risk: Certain of the Underlying Index constituents in which the Fund invests may engage in short sale transactions. Short sale risks include, among others, the potential loss of more money than the actual cost of the investment, and the risk that the third party to the short sale may fail to honor its contract terms, causing a loss to the Underlying Index constituent.

Small-Capitalization Companies Risk: Compared to mid- and large-capitalization companies, small-capitalization companies may be less stable and more susceptible to adverse developments, and their securities may be more volatile and less liquid.

Strategy Risk: There is no guarantee that the Underlying Index will outperform any alternative strategy that might be employed in respect of the component assets or that past volatilities and correlations of particular asset classes will be indicative of future results.

Tracking Error Risk: Tracking error is the divergence of the Fund's performance from that of the Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Underlying Index, pricing differences (including differences between a security's price at the local market close and the Fund's valuation of a security at the time of calculation of the Fund's NAV), differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result

because the Fund incurs fees and expenses, while the Underlying Index does not. ETFs that track indices with significant weight in emerging markets issuers may experience higher tracking error than other index ETFs that do not track such indices.

Trading Halt Risk: An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

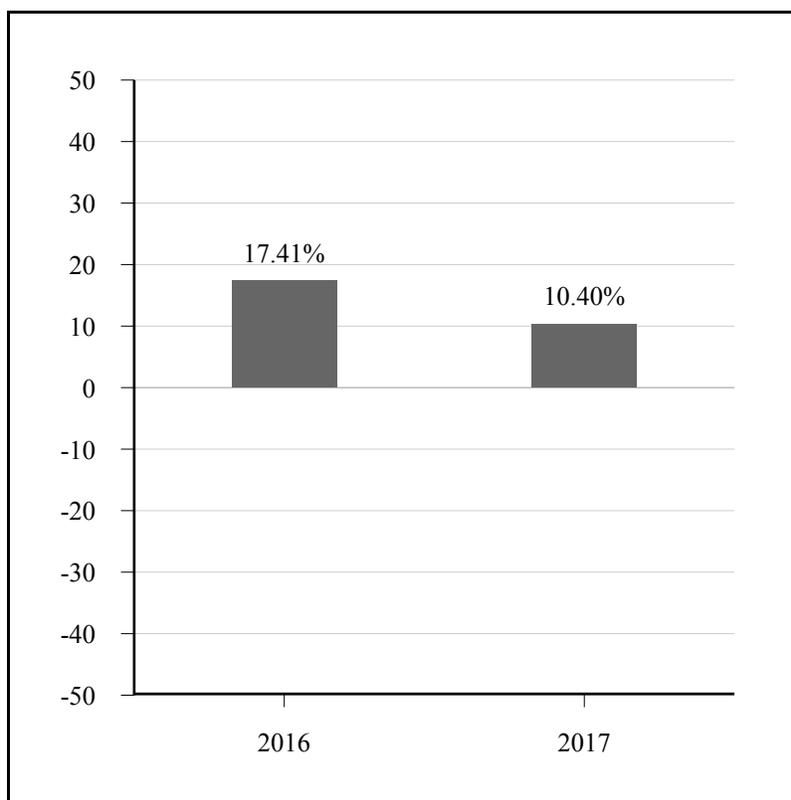

U.S. Economic Risk: Decreasing U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates, a recession in the United States or increases in foreclosures rates may have an adverse impact on the Fund.

Valuation Risk: The sales price the Fund could receive for a security may differ from the Fund's valuation of the security and may differ from the value used by the Underlying Index, particularly for securities that trade in low value or volatile markets or that are valued using a fair value methodology. The value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

PERFORMANCE INFORMATION

The bar chart and table that follow show how the Fund performed on a calendar year basis and provide an indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing the Fund's average annual total returns for the indicated periods compared with the Fund's benchmark index and a broad measure of market performance. The Fund's past performance (before and after taxes) is not necessarily indicative of how the Fund will perform in the future. Updated performance information is available online at www.globalxfunds.com.

Annual Total Returns (Years Ended December 31)

Best Quarter: 06/30/16 7.03%
Worst Quarter: 12/31/16 -1.07%

Average Annual Total Returns (for the Periods Ended December 31, 2017)

	One Year Ended December 31, 2017	Since Inception (07/13/2015)
Global X SuperDividend[®] Alternatives ETF:		
·Return before taxes	10.40%	9.00%
·Return after taxes on distributions ¹	8.59%	6.03%
·Return after taxes on distributions and sale of Fund Shares ¹	5.92%	5.51%

(Index returns reflects invested dividends net of withholding taxes, but reflects no deduction for fees, expenses, or other taxes)	11.28%	9.88%
S&P 500 Index		
(Index returns do not reflect deduction for fees, expenses, or taxes)	21.83%	12.62%

¹ After-tax returns are calculated using the historical highest individual U.S. federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your specific tax situation and may differ from those shown above. After-tax returns are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts ("IRAs").

FUND MANAGEMENT

Investment Adviser: Global X Management Company LLC.

Portfolio Managers: The professionals primarily responsible for the day-to-day management of the Fund are Chang Kim, CFA, James Ong, CFA, and Nam To ("Portfolio Managers"). Mr. Kim has been Portfolio Manager of the Fund since inception. Mr. Ong has been Portfolio Manager of the Fund since March 1, 2016. Mr. To has been Portfolio Manager of the Fund since March 1, 2018.

PURCHASE AND SALE OF FUND SHARES

Shares of the Fund are listed and traded at market prices on a national securities exchange. Shares may only be purchased and sold on the exchange through a broker-dealer. The price of Shares is based on market price, and because ETF shares trade at market prices rather than at NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). Only "Authorized Participants" (as defined in the SAI) who have entered into agreements with the Fund's distributor, SEI Investments Distribution Co. ("Distributor"), may engage in creation or redemption transactions directly with the Fund. The Fund will only issue or redeem Shares that have been aggregated into blocks of 50,000 Shares or multiples thereof ("Creation Units"). The Fund will issue or redeem Creation Units in return for a basket of cash and/or securities that the Fund specifies any day that national securities exchanges are open for business ("Business Day").

TAX INFORMATION

The Fund intends to make distributions that may be taxable to you as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an IRA, in which case distributions from such tax-deferred arrangement may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer, sales persons or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.

Global X U.S. Preferred ETF

Ticker: PFFD Exchange: Cboe BZX, Inc.

INVESTMENT OBJECTIVE

The Global X U.S. Preferred ETF (“Fund”) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the ICE BofAML Diversified Core U.S. Preferred Securities Index (“Underlying Index”).

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares (“Shares”) of the Fund. You will also incur usual and customary brokerage commissions when buying and selling Shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees:	0.23%
Distribution and Service (12b-1) Fees:	None%
Other Expenses: ¹	0.00%
Total Annual Fund Operating Expenses:	0.23%

¹ "Other Expenses" reflect estimated expenses for the Fund's first fiscal year of operations.

Example: The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account customary brokerage commissions that you pay when purchasing or selling Shares of the Fund in the secondary market. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

One Year	Three Years
\$24	\$74

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. From the Fund's commencement of operations on September 11, 2017 to the end of the most recent fiscal period, the Fund's portfolio turnover rate was 3.82% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund invests at least 80% of its total assets in the securities of the Underlying Index. The Fund also invests at least 80% of its total assets in preferred securities that are domiciled in, principally traded in or whose revenues are primarily from the U.S. The Fund's 80% investment policies are non-fundamental and require 60 days prior written notice to shareholders before they can be changed.

The Underlying Index is designed to track the broad-based performance of the U.S. preferred securities market. The Underlying Index includes different categories of preferred stock, such as floating, variable and fixed-rate preferreds, cumulative and non-cumulative preferreds, and trust preferreds. Qualifying preferred securities must be listed on a U.S. exchange, denominated in U.S. dollars, and have a minimum amount outstanding of \$100 million. Qualifying securities must meet minimum price, liquidity, maturity and other requirements as determined by ICE Data Indices, LLC (the "Index Provider").

Constituents in the Underlying Index are capitalization-weighted based on their current amount outstanding times the market price plus accrued interest. A weighting cap of 10% is applied at the issuer level to limit the aggregate weight of a single issuer to 10% at each rebalance. The Underlying Index may include large-, mid- or small-capitalization companies. Components of the

Underlying Index primarily include financials, real estate, telecommunications and utility companies. The Underlying Index is rebalanced quarterly. The Fund's investment objective and Underlying Index may be changed without shareholder approval.

The Underlying Index is sponsored by the Index Provider, which is an organization that is independent of the Fund and Global X Management Company LLC, the investment adviser for the Fund ("Adviser"). The Index Provider determines the relative weightings of the securities in the Underlying Index and publishes information regarding the market value of the Underlying Index.

The Adviser uses a "passive" or indexing approach to try to achieve the Fund's investment objective. Unlike many investment companies, the Fund does not try to outperform the Underlying Index and does not seek temporary defensive positions when markets decline or appear overvalued.

The Fund generally uses a representative sampling strategy with respect to the Underlying Index. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index in terms of key risk factors, performance attributes and other characteristics. The Fund may or may not hold all of the securities in the Underlying Index.

The Adviser expects that, over time, the correlation between the Fund's performance and that of the Underlying Index, before fees and expenses, will exceed 95%. A correlation percentage of 100% would indicate perfect correlation.

The Fund concentrates its investments (i.e., holds 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Underlying Index is concentrated. As of January 31, 2018, the Underlying Index was concentrated in the financials sector.

SUMMARY OF PRINCIPAL RISKS

As with any investment, you could lose all or part of your investment in the Fund, and the Fund's performance could trail that of other investments. There is no guarantee that the Fund will achieve its investment objective. The Fund is subject to the principal risks noted below, any of which may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the **Additional Information About the Funds** section of this Prospectus and in the Statement of Additional Information ("SAI").

Asset Class Risk: Securities in the Underlying Index or otherwise held in the Fund's portfolio may underperform in comparison to the general securities markets or other asset classes.

Asset Fluctuation Risk: Certain shareholders, including an Authorized Participant (as defined in the SAI), the Adviser or an affiliate of the Adviser, may own a substantial amount of the Fund's Shares. Additionally, from time to time an Authorized Participant, a third party investor, the Adviser, or an affiliate of the Adviser may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or to allow the Fund to achieve size or scale. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its Shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations, in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on a national securities exchange and may, therefore, have a material upward or downward effect on the market price of the Shares.

Authorized Participants Concentration Risk: The Fund has a limited number of financial institutions that may act as Authorized Participants. Only Authorized Participants who have entered into agreements with the Fund's distributor may engage in creation or redemption transactions directly with the Fund. To the extent that those Authorized Participants exit the business or are unable to process creation and/or redemption orders, and no other Authorized Participant is able to step forward to create or redeem in either of those cases, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting from a securities exchange.

Concentration Risk: Because the Fund's investments are concentrated in the financials sector, the Fund will be susceptible to loss due to adverse occurrences affecting this sector or industry. To the extent that the Underlying Index concentrates in the securities of issuers in a particular country, industry, market, asset class, or sector, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in a country, industry, market, asset class, or sector, the Fund faces more risks than if it were diversified broadly over numerous countries, industries, markets, asset classes, or sectors. Such risks, any of which may adversely affect the companies in which the Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand; competition for resources; adverse labor relations; political or world events; obsolescence of technologies; and increased competition or new product

introductions that may affect the profitability or viability of companies in a sector or industry. In addition, at times, such country, industry, market, asset class, or sector may be out of favor and underperform other sectors or industries or the market as a whole. For additional details on these risks, please see **Risks Related to Investing in the Financials Sector**.

Cyber Security Risk: Failures or breaches of the electronic systems of the Fund, the Adviser, and the Fund's other service providers, market makers, Authorized Participants or the issuers of securities in which the Fund invests have the ability to cause disruptions and negatively impact the Fund's business operations, potentially resulting in financial losses to the Fund and its shareholders. While the Fund has established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Furthermore, the Fund cannot control the cyber security plans and systems of the Fund's service providers, market makers, Authorized Participants or issuers of securities in which the Fund invests.

Equity Securities Risk: Equity securities are subject to changes in value and their values may be more volatile than other asset classes, as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions.

Fixed-to-Floating Rate Securities Risk: The Fund invests in fixed-to-floating rate preferred securities, which are securities that have an initial term with a fixed dividend rate and following this initial term bear a floating dividend rate. Securities which include a floating or variable interest rate component can be less sensitive to interest rate changes than securities with fixed interest rates, but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Although floating rate preferred securities can be less sensitive to interest rate risk than fixed-rate preferred securities, they are subject to the risks applicable to preferred securities more generally.

Foreign Securities Risk: The Fund's investments in foreign securities can be riskier than U.S. securities investments. Investments in the securities of foreign issuers (including investments in ADRs and GDRs) are subject to the risks associated with investing in those foreign markets, such as heightened risks of inflation or nationalization. The prices of foreign securities and the prices of U.S. securities have, at times, moved in opposite directions. In addition, securities of foreign issuers may lose value due to political, economic and geographic events affecting a foreign issuer or market. During periods of social, political or economic instability in a country or region, the value of a foreign security traded on U.S. exchanges could be affected by, among other things, increasing price volatility, illiquidity, or the closure of the primary market on which the security (or the security underlying the ADR or GDR) is traded. You may lose money due to political, economic and geographic events affecting a foreign issuer or market.

Index-Related Risk: There is no guarantee that the Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders.

Interest Rate Risk: Interest rate risk is the risk that prices of fixed income securities generally increase when interest rates decline and decrease when interest rates increase. The Fund may lose money if short-term or long-term interest rates rise sharply.

Issuer Risk: Fund performance depends on the performance of individual companies in which the Fund invests. Changes to the financial condition of any of those companies may cause the value of their securities to decline.

Large-Capitalization Companies Risk: Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

Listing Standards Risk: Under new continuous listing standards adopted by the Fund's listing exchange, the Fund will be required to confirm on an ongoing basis that the components of the Underlying Index satisfy the applicable listing requirements. In the event that the Underlying Index does not comply with the applicable listing requirements, the Fund would be required to rectify such non-compliance by requesting that the Index Provider modify the Underlying Index, adopting a new underlying index, or obtaining relief from the SEC. Failure to rectify such non-compliance may result in the Fund being delisted by the listing exchange.

Management Risk: The Fund is subject to the risk that the Adviser's investment management strategy may cause the Fund to underperform the market or its relevant benchmark or adversely affect the ability of the Fund to achieve its investment objective.

Market Risk: Turbulence in the financial markets and reduced liquidity may negatively affect issuers, which could have an adverse effect on the Fund. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, or other government actors, which could include increasing interest rates, could cause increased volatility in financial markets and lead to higher levels of Fund redemptions, which could have a negative impact on the Fund. The Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns.

Market Trading Risk: Shares of the Fund are publicly traded on a national securities exchange, which may subject shareholders to numerous market trading risks, including the potential lack of an active market for Shares, losses from trading in secondary markets, periods of high volatility and disruption in the creation/redemption process of the Fund. Any of these factors may lead to the Shares trading at a premium or discount to NAV.

Mid-Capitalization Companies Risk: Mid-capitalization companies may have greater price volatility, lower trading volume and less liquidity than large-capitalization companies. In addition, mid-capitalization companies may have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies.

Non-Diversification Risk: The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940 ("1940 Act"). As a result, the Fund is subject to the risk that it may be more volatile than a diversified fund because the Fund may invest its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Operational Risk: The Fund is exposed to operational risk arising from a number of factors, including but not limited to human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Passive Investment Risk: The Fund is not actively managed and the Adviser does not attempt to take defensive positions in declining markets. Unlike many investment companies, the Fund does not seek to outperform its Underlying Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund's return to be lower than if the Fund employed an active strategy.

Preferred Stock Risk: Preferred stocks are subject to many of the risks associated with debt securities, including interest rate risk. As interest rates rise, the value of the preferred stocks held by the Fund are likely to decline. In addition, preferred stocks may not pay a dividend, an issuer may suspend payment of dividends on preferred stock at any time, and in certain situations an issuer may call or redeem its preferred stock or convert it to common stock. Preferred stocks are considered hybrid securities, and are subject to the risks of equity securities and risks of debt securities. The claims of holders of hybrid securities of an issuer are generally subordinated to those of holders of traditional debt securities in bankruptcy, and thus hybrid securities may be more volatile and subject to greater risk than traditional debt securities, and may in certain circumstances even be more volatile than traditional equity securities. At the same time, hybrid securities may not fully participate in gains of their issuer and thus potential returns of such securities are generally more limited than traditional equity securities, which would participate in such gains.

Premium/Discount Risk: Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Risks Related to Investing in the Financials Sector: Performance of companies in the financials sector may be adversely impacted by many factors, including, among others, government regulations, economic conditions, credit rating downgrades, changes in interest rates, and decreased liquidity in credit markets. This sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted.

Tracking Error Risk: Tracking error is the divergence of the Fund's performance from that of the Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Underlying Index, pricing differences (including differences between a security's price at the local market close and the Fund's valuation of a security at the time of calculation of the Fund's NAV), differences in transaction costs, the Fund's holding

of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Underlying Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Underlying Index does not. ETFs that track indices with significant weight in emerging markets issuers may experience higher tracking error than other index ETFs that do not track such indices.

Trading Halt Risk: An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

U.S. Economic Risk: Decreasing U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates, a recession in the United States or increases in foreclosures rates may have an adverse impact on the Fund.

Valuation Risk: The sales price the Fund could receive for a security may differ from the Fund's valuation of the security and may differ from the value used by the Underlying Index, particularly for securities that trade in low value or volatile markets or that are valued using a fair value methodology. The value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

PERFORMANCE INFORMATION

The Fund does not have a full calendar year of performance. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's returns and comparing the Fund's performance to the Underlying Index. The Fund's performance is not necessarily indicative of how the Fund will perform in the future.

FUND MANAGEMENT

Investment Adviser: Global X Management Company LLC.

Portfolio Managers: The professionals primarily responsible for the day-to-day management of the Fund are Chang Kim, CFA, James Ong, CFA, and Nam To ("Portfolio Managers"). Messrs. Kim and Ong have been Portfolio Managers of the Fund since inception. Mr. To has been Portfolio Manager of the Fund since March 1, 2018.

PURCHASE AND SALE OF FUND SHARES

Shares of the Fund are listed and traded at market prices on a national securities exchange. Shares may only be purchased and sold on the exchange through a broker-dealer. The price of Shares is based on market price, and because ETF shares trade at market prices rather than at NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). Only "Authorized Participants" (as defined in the SAI) who have entered into agreements with the Fund's distributor, SEI Investments Distribution Co. ("Distributor"), may engage in creation or redemption transactions directly with the Fund. The Fund will only issue or redeem Shares that have been aggregated into blocks of 50,000 Shares or multiples thereof ("Creation Units"). The Fund will issue or redeem Creation Units in return for a basket of cash and/or securities that the Fund specifies any day that national securities exchanges are open for business ("Business Day").

TAX INFORMATION

The Fund intends to make distributions that may be taxable to you as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an IRA, in which case distributions from such tax-deferred arrangement may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer, sales persons or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

This Prospectus contains information about investing in a Fund. Please read this Prospectus carefully before you make any investment decisions. Shares of a Fund are listed for trading on a national securities exchange. The market price for a Share of a Fund may be different from the Fund's most recent NAV. ETFs are funds that trade like other publicly-traded securities. A Fund is designed to track an Underlying Index. Similar to shares of an index mutual fund, each Share of a Fund represents an ownership interest in an underlying portfolio of securities. Unlike shares of a mutual fund, which can be bought and redeemed from the issuing fund by all shareholders at a price based on NAV, Shares of a Fund may be purchased or redeemed directly from the Fund at NAV solely by Authorized Participants and only in Creation Unit increments. Also unlike shares of a mutual fund, Shares of a Fund are listed on a national securities exchange and trade in the secondary market at market prices that change throughout the day. A Fund is designed to be used as part of broader asset allocation strategies. Accordingly, an investment in a Fund should not constitute a complete investment program. An index is a financial calculation, based on a grouping of financial instruments, and is not an investment product, while a Fund is an actual investment portfolio. The performance of a Fund and its Underlying Index may vary for a number of reasons, including transaction costs, non-U.S. currency valuations, asset valuations, corporate actions (such as mergers and spin-offs), timing variances and differences between a Fund's portfolio and the Underlying Index resulting from the Fund's legal restrictions (such as diversification requirements) that apply to the Fund but not to the Underlying Index.

Each Fund invests at least 80% of its total assets in the securities of the Underlying Index. Each Fund's 80% investment policy is non-fundamental and requires 60 days prior written notice to shareholders before it can be changed. Other than for the Global X U.S. Preferred ETF, the Global X U.S. Preferred ETF will utilize a representative sampling strategy with respect to its Underlying Index and will invest in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The Adviser anticipates that, generally, each Fund will hold all of the securities that comprise its Underlying Index in proportion to their weightings in such Underlying Index. However, under various circumstances, it may not be possible or practicable to purchase all of those securities in those weightings. In these circumstances, a Fund may purchase a sample of securities in its Underlying Index. There also may be instances in which the Adviser may choose to underweight or overweight a security in a Fund's Underlying Index, purchase securities not in the Fund's Underlying Index that the Adviser believes are appropriate to substitute for certain securities in such Underlying Index or utilize various combinations of other available investment techniques in seeking to replicate as closely as possible, before fees and expenses, the price and yield performance of a Fund's Underlying Index. Each Fund may sell securities that are represented in its Underlying Index in anticipation of their removal from such Underlying Index or purchase securities not represented in its Index in anticipation of their addition to such Underlying Index. Each Fund's investment objective and its Underlying Index may be changed without shareholder approval.

An investment in a Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Adviser or any of its affiliates.

A FURTHER DISCUSSION OF PRINCIPAL RISKS

The Funds are subject to the risks described below. Some or all of these risks may adversely affect a Fund's NAV, trading price, yield, total return and/or its ability to meet its objective.

Asset Class Risk

The returns from the types of securities in which a Fund invests may under-perform returns from the various general securities markets or different asset classes. The stocks in the Underlying Indices may under-perform fixed-income investments and stock market investments that track other markets, segments and sectors. Different types of securities tend to go through cycles of out-performance and under-performance in comparison to the general securities markets.

Asset Fluctuation Risk

Certain shareholders, including an Authorized Participant, the Adviser or an affiliate of the Adviser, may own a substantial amount of a Fund's Shares. Additionally, from time to time, an Authorized Participant, a third party investor, the Adviser, or an affiliate of the Adviser may invest in the Fund and hold its investment for a specific period of time in order to facilitate commencement of the Fund's operations or to allow the Fund to achieve size or scale. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the Exchange and may, therefore, have a material upward or downward effect on the market price of the Shares.

Authorized Participant Concentration Risk

A Fund has a limited number of financial institutions that may act as Authorized Participants. Only Authorized Participants who have entered into agreements with the Fund's Distributor may engage in creation or redemption transactions directly with the Fund. To the extent that those Authorized Participants exit the business, or are unable to process creation and/or redemption orders, and no other Authorized Participant is able to step forward to create and redeem in either of those cases, Shares may trade like CEF shares at a discount to NAV, and may possibly face delisting from the relevant national securities exchange.

BDC Risk

BDC Risk applies to the Global X SuperDividend[®] Alternatives ETF.

BDCs may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. A BDC is a form of investment company that is required to invest at least 70% of its total assets in securities (typically debt) of private companies, thinly traded U.S. public companies, or short-term high-quality debt securities. BDCs usually trade at a discount to their NAV because they invest in unlisted securities and have limited access to capital markets. The BDCs held by the Fund may leverage their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects the BDC to increased risks, including the likelihood of increased volatility and the possibility that the BDC's common share income will fall if the dividend rate of the preferred shares or the interest rate on any borrowings rises. BDCs are subject to management and other expenses, which will be indirectly paid by the Fund.

Commodities Exposure Risk

Commodities Exposure Risk applies to the Global X MLP & Energy Infrastructure ETF and Global X SuperDividend[®] Alternatives ETF.

To the extent that its Underlying Index invests in, or otherwise has exposure to, securities and markets that are susceptible to fluctuations in certain commodity markets, any negative changes in commodity markets could have a great impact on the Fund. Commodity prices may be influenced or characterized by unpredictable factors, including, where applicable, high volatility, changes in supply and demand relationships, weather, agriculture, trade, changes in interest rates and monetary and other governmental policies, action and inaction. Securities of companies held by the Fund that are dependent on a single commodity, or are concentrated on a single commodity sector, may typically exhibit even higher volatility attributable to commodity prices.

Concentration Risk

In following its methodology, an Underlying Index may be concentrated to a significant degree in securities of issuers located in a single country, market, industry, group of industries, asset class, or sector. To the extent that an Underlying Index concentrates in the securities of issuers in such an area, a Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in a single country, market, industry, group of industries, asset class, or sector, a Fund faces more risks than if it were diversified broadly over numerous such areas. Such risks, any of which may adversely affect the companies in which a Fund invests, may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand; competition for resources; adverse labor relations; political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in a country, market, industry, group of industries, asset class, or sector. In addition, at times, such country, market, industry, group of industries, asset class, or sector may be out of favor and underperform other such categories or the market as a whole.

Credit Risk

Credit Risk applies to the Global X SuperDividend[®] Alternatives ETF.

Credit risk is the risk that the issuer of the security will not be able to make principal and interest payments when due. Changes in an issuer's credit rating or the market's perception of an issuer's creditworthiness may also affect the value of the Fund's investment in that issuer. Securities rated in the four highest categories by the rating agencies are considered investment grade but they may also have some speculative characteristics. Investment grade ratings do not guarantee that bonds will not lose value.

Currency Risk

Currency Risk applies to the Global X SuperDividend[®] Alternatives ETF.

Foreign currencies are subject to risks, which include changes in the debt level and trade deficit of the country issuing the foreign currency; inflation rates of the United States and the country issuing the foreign currency; investors' expectations concerning inflation rates; interest rates of the United States and the country issuing the foreign currency; investors' expectations concerning interest rates; investment and trading activities of mutual funds, hedge funds and currency funds; and global or regional political, economic or financial events and situations.

In addition, a foreign currency in which the Fund invests may not maintain its long-term value in terms of purchasing power in the future. When the price of a foreign currency in which the Fund invests declines, it may have an adverse impact on the Fund.

Foreign exchange rates are influenced by the factors identified above and may also be influenced by: changing supply and demand for a particular currency; monetary policies of governments (including exchange control programs, restrictions on local exchanges or markets and limitations on foreign investment in a country or on investment by residents of a country in other countries); changes in balances of payments and trade; trade restrictions; and currency devaluations and revaluations. Also, governments from time to time intervene in the currency markets, directly and by regulation, in order to influence prices directly. These events and actions are unpredictable. The resulting volatility in the USD/foreign currency exchange rate could materially and adversely affect the performance of the Fund.

Custody Risk

Custody Risk applies to the Global X SuperDividend[®] Alternatives ETF.

Custody risk refers to risks in the process of clearing and settling trades and in the holding of securities by local banks, agents and depositories. Low trading volumes and volatile prices in less developed markets make trades harder to complete and settle. Local agents are held only to the standard of care of the local markets. Governments or trade groups may compel local agents to hold securities in designated depositories that are subject to independent evaluation. Generally, the less developed a country's securities market, the greater the likelihood of custody problems occurring.

Cyber Security Risk

Failures or breaches of the electronic systems of each Fund, each Fund's Adviser, each Fund's other service providers, market makers, Authorized Participants or the issuers of securities in which each Fund invests have the ability to cause disruptions and negatively impact each Fund's business operations, potentially resulting in financial losses to each Fund and its shareholders. While each Fund has established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Furthermore, each Fund cannot control the cyber security plans and systems of each Fund's service providers, market makers, Authorized Participants or issuers of securities in which each Fund invests.

Emerging Markets Risk

Emerging Markets Risk applies to the Global X SuperDividend[®] Alternatives ETF.

Emerging markets risk is the risk that the securities markets of emerging countries are less liquid, subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries, as has historically been the case.

The risks of foreign investment are heightened when the issuer is located in an emerging country. The Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of the Fund, the Adviser, its affiliates and their respective clients and other service providers. The Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees, which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require government approval prior to investments by foreign persons or limit investment by foreign persons to only a

specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by the Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions, such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian, Latin American and other countries), the Fund may invest in such countries through other investment funds in such countries.

Many emerging market countries have experienced currency devaluations, substantial (and, in some cases, extremely high) rates of inflation, and economic recessions. These circumstances have had a negative effect on the economies and securities markets of those emerging countries. Economies in emerging market countries generally are dependent upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. As a result, emerging market countries are particularly vulnerable to downturns of the world economy. The 2007-2008 global financial crisis tightened international credit supplies and weakened the global demand for their exports. As a result, certain of these economies faced significant economic difficulties, which caused some emerging market economies to fall into recession. Recovery from such conditions may be gradual and/or halting as weak economic conditions in developed markets may continue to suppress demand for exports from emerging market countries.

Many emerging market countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging market countries are authoritarian in nature or have been installed or removed as a result of military coups, while governments in other emerging market countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging market countries. Many emerging market countries have experienced strained international relations due to border disputes, historical animosities or other defense concerns. These situations may cause uncertainty in the markets and may adversely affect the performance of these economies. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging market countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not occur in other emerging market countries, including China.

The Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return to the Fund from an investment in such countries.

Settlement and clearance procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve the Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement, clearance or registration problems may make it more difficult for the Fund to value its portfolio securities and could cause the Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Fund has delivered or the Fund's inability to complete its contractual obligations because of theft or other reasons. In addition, local agents and depositories are subject to local standards of care that may not be as rigorous as developed countries. Governments and other groups may also require local agents to hold securities in depositories that are not subject to independent verification. The less developed a country's securities market, the greater the risk to the Fund.

The creditworthiness of the local securities firms used by the Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The Fund's use of foreign currency management techniques in emerging countries may be limited. Due to the limited market for these instruments in emerging countries, all or a significant portion of the Fund's currency exposure in emerging countries may not be covered by such instruments.

Rising interest rates, combined with widening credit spreads, could negatively impact the value of emerging market debt and increase funding costs for foreign issuers. In such a scenario, foreign issuers might not be able to service their debt obligations, the market for emerging market debt could suffer from reduced liquidity, and any investing Fund could lose money.

Certain issuers in emerging market countries may utilize share blocking schemes. Share blocking refers to a practice, in certain foreign markets, where voting rights related to an issuer's securities are predicated on these securities being blocked from trading

at the custodian or sub-custodian level, for a period of time around a shareholder meeting. These restrictions have the effect of barring the purchase and sale of certain voting securities within a specified number of days before and, in certain instances, after a shareholder meeting where a vote of shareholders will be taken. Share blocking may prevent a Fund from buying or selling securities for a period of time. During the time that shares are blocked trades in such securities will not settle, the blocking period can last up to several weeks. The process for having a blocking restriction lifted can be quite onerous with the particular requirements varying widely by country. In addition, in certain countries, the block cannot be removed. As a result of the ramifications of voting ballots in markets that allow share blocking, the Adviser, on behalf of the Fund, reserves the right to abstain from voting proxies in those markets.

Equity Securities Risk

A Fund may invest in equity securities, which are subject to changes in value that may be attributable to market perception of a particular issuer, general stock market fluctuations that affect all issuers, as a result of such factors as a company's business performance, investor perceptions, stock market trends and general economic conditions. Investments in equity securities may be more volatile than investments in other asset classes.

Fixed-to-Floating Rate Securities Risk

Fixed-to-Floating Rate Securities Risk applies to the Global X U.S. Preferred ETF.

The Fund invests in fixed-to-floating rate preferred securities, which are securities that have an initial term with a fixed dividend rate and following this initial term bear a floating dividend rate. Securities which include a floating or variable interest rate component can be less sensitive to interest rate changes than securities with fixed interest rates, but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. A decline in interest rates may result in a reduction in income received from floating rate securities held by the Fund and may adversely affect the value of the Fund's shares. Generally, floating rate securities carry lower yields than similar fixed rate securities. The interest rate for a floating rate security resets or adjusts periodically by reference to a benchmark interest rate. The impact of interest rate changes on floating rate investments is typically mitigated by the periodic interest rate reset of the investments. Fixed-to-floating rate securities generally are subject to legal or contractual restrictions on resale, may trade infrequently, and their value may be impaired when the Fund needs to liquidate such securities. Benchmark interest rates, such as the LIBOR, may not accurately track market interest rates. There is no guarantee or assurance that: (i) the Fund will be able to invest in a desired amount of fixed-to-floating rate securities, (ii) the Fund will be able to buy such securities at a desirable price, or (iii) floating rate securities in which it invests or seeks to invest will be actively traded. Any or all of the foregoing, should they occur, could negatively impact the Fund.

Foreign Financial Institution Risk

Foreign Financial Institution Risk applies to the Global X SuperDividend[®] Alternatives ETF.

Certain of the securities that comprise the Underlying Index, while traded on U.S. exchanges, may be issued by foreign financial institutions. Securities issued by non-U.S. issuers have different risks from securities issued by U.S. issuers. These include differences in accounting, auditing and financial reporting standards, the possibility of expropriation or confiscatory taxation, adverse changes in investment or exchange control regulations, political instability which could affect U.S. investments in non-U.S. countries, and potential restrictions of the flow of international capital. Non-U.S. issuers may be subject to less governmental regulation than U.S. issuers. Moreover, individual non-U.S. economies may differ favorably or unfavorably from the U.S. economy in such respects as growth of gross domestic product, rate of inflation, capital reinvestment, resource self-sufficiency and balance of payment positions. In addition, the value of these securities may fluctuate due to changes in the exchange rate of the issuer's local currency against the U.S. dollar. The health of many foreign financial institutions is often tied closely with the financial stability of the local economy in which they are domiciled, and therefore are subject to additional risks including but not limited to: policy changes, slow economic growth, and high levels of debt.

Foreign Securities Risk

Each Fund's assets may be invested within the equity markets of countries outside of the United States. These markets are subject to special risks associated with foreign investment, including, but not limited to: lower levels of liquidity and market efficiency; greater securities price volatility; exchange rate fluctuations and exchange controls; less availability of public information about issuers; limitations on foreign ownership of securities; imposition of withholding or other taxes; imposition of restrictions on the expatriation of the assets of a Fund; higher transaction and custody costs and delays in settlement procedures; difficulties in enforcing contractual obligations; lower levels of regulation of the securities market; and weaker accounting, disclosure and

reporting requirements. Shareholder rights under the laws of some foreign countries may not be as favorable as U.S. laws. Thus, a shareholder may have more difficulty in asserting its rights or enforcing a judgment against a foreign company than a shareholder of a comparable U.S. company. Investment of more than 25% of a Fund's total assets in securities located in one country or region will subject the Fund to increased country or region risk with respect to that country or region.

Geographic Risk

Geographic Risk applies to the Global X SuperDividend[®] Alternatives ETF.

Geographic risk is the risk that the Fund's assets may be concentrated in countries located in the same geographic region. This concentration will subject the Fund to risks associated with that particular region, or a region economically tied to that particular region, such as a natural disaster.

High Dividend Yield Stocks Risk

High Dividend Yield Stocks Risk applies to the Global X SuperDividend[®] Alternatives ETF.

High yielding stocks are often speculative, high risk investments. These companies can be paying out more than they can support and may reduce their dividends or stop paying dividends at any time, which could have a material adverse effect on the stock price of these companies and the Fund's performance.

High Yield Securities Risk

High Yield Securities Risk applies to the Global X SuperDividend[®] Alternatives ETF.

High yield securities typically involve greater risk and are less liquid than higher grade issues. Changes in general economic conditions, changes in the financial condition of the issuers and changes in interest rates may adversely impact the ability of issuers of high yield securities to make timely payments of interest and principal.

The Fund may invest in high yield securities that offer generally a higher current yield than that available from higher grade issues, but they typically involve greater risk. Securities rated below investment grade commonly are referred to as "junk bonds." The ability of issuers of high yield securities to make timely payments of interest and principal may be impacted by adverse changes in general economic conditions, changes in the financial condition of their issuers and price fluctuations in response to changes in interest rates. High yield securities are less liquid than investment grade securities and may be difficult to price or sell, particularly in times of negative sentiment toward high yield securities. Issuers of high yield securities may have a larger amount of outstanding debt relative to their assets than issuers of investment grade securities have. Periods of economic downturn or rising interest rates may cause the issuers of high yield securities to experience financial distress, which could adversely impact their ability to make timely payments of principal and interest and could increase the possibility of default. The market value and liquidity of high yield securities may be impacted negatively by adverse publicity and investor perceptions, whether or not based on fundamental analysis, especially in a market characterized by low trade volume.

Income Risk

Income Risk applies to the Global X SuperDividend[®] Alternatives ETF.

The Fund's income may decline when interest rates fall. This decline can occur because the Fund may invest in or have exposure to lower-yielding bonds as bonds in its portfolio mature or the Fund otherwise needs to purchase additional bonds.

Index-Related Risk

There is no guarantee that a Fund will achieve a high degree of correlation to the Underlying Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on a Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on a Fund and its shareholders.

Industry Specific Risk

Industry Specific Risk applies to the Global X MLP & Energy Infrastructure ETF.

MLPs operating in the energy sector are also subject to risks that are specific to the industry they serve.

Midstream

MLPs that operate midstream assets are subject to supply and demand fluctuations in the markets they serve, which may be impacted by a wide range of factors, including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, increasing operating expenses and economic conditions, among others. Further, MLPs that operate gathering and processing assets are subject to natural declines in the production of the oil and gas fields they serve. In addition, some gathering and processing contracts subject the owner of such assets to direct commodity price risk.

Marine Shipping

Marine shipping MLPs are primarily marine transporters of natural gas, crude oil or refined petroleum products. Marine shipping companies are exposed to many of the same risks as other energy companies. In addition, the highly cyclical nature of the marine transportation industry may lead to volatile changes in charter rates and vessel values, which may adversely affect the revenues, profitability and cash flows of such companies. Fluctuations in charter rates result from changes in the supply and demand for vessel capacity and changes in the supply and demand for certain energy commodities. Changes in demand for transportation of commodities over longer distances and supply of vessels to carry those commodities may materially affect revenues, profitability and cash flows. The value of marine transportation vessels may fluctuate and could adversely affect the value of shipping company securities in each Fund's portfolio. Declining marine transportation values could affect the ability of shipping companies to raise cash by limiting their ability to refinance their vessels, thereby adversely impacting such company's liquidity. Shipping company vessels are at risk of damage or loss because of events such as mechanical failure, collision, human error, war, terrorism, piracy, cargo loss and bad weather. In addition, changing economic, regulatory and political conditions in some countries, including political and military conflicts, have from time to time resulted in attacks on vessels, mining of waterways, piracy, terrorism, labor strikes, boycotts and government requisitioning of vessels. These sorts of events could interfere with shipping lanes and result in market disruptions and a significant reduction in cash flow for the shipping companies.

Interest Rate Risk

Interest Rate Risk applies to the Global X SuperDividend[®] Alternatives ETF and Global X U.S. Preferred ETF.

Interest rate risk is the risk that prices of fixed income securities generally increase in value when interest rates decline and decrease in value when interest rates increase. The Fund may lose money if short term or long term interest rates rise sharply.

Investors should note that interest rates currently are at, or near, historic lows, but may ultimately increase, with potentially sudden and unpredictable effects on the markets and the Fund's investments.

Fixed income securities of lower credit quality or with longer durations tend to be more sensitive to changes in interest rates, often making them more volatile in response to interest rate changes than securities of higher credit quality or with shorter durations. Interest rate fluctuations may also negatively impact the values of equity and other non-fixed income securities.

Inflation-indexed bonds, including Treasury Inflation-Protected Securities, decline in value when real interest rates rise (the real interest rate is the rate of interest an investor expects to receive after allowing for inflation). In certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, Inflation-indexed bonds may experience greater losses than other fixed income securities with similar durations.

Variable and floating rate securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. Inverse floating rate securities may decrease in value if interest rates increase. Inverse floating rate securities may also exhibit greater price volatility than a fixed rate obligation with similar credit quality. When the Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities, which may also impact the net asset value of the Fund's shares.

Following the financial crisis that began in 2007, the Board of Governors of the Federal Reserve System ("Federal Reserve") has attempted to stabilize the U.S. economy and support the U.S. economic recovery by keeping the federal funds rate at or near zero percent. In addition, the Federal Reserve purchased large quantities of securities issued or guaranteed by the U.S. government, its agencies or instrumentalities on the open market ("Quantitative Easing"). As the Federal Reserve's holdings from Quantitative Easing decrease, and when the Federal Reserve raises the federal funds rate, there is a risk that interest rates across the U.S.

financial system will rise. Such policies may expose fixed-income and related markets to heightened volatility and may reduce liquidity for certain Fund investments, which could cause the value of the Fund's investments and the NAV of the Fund's shares to decline. To the extent the Fund experiences high redemptions in connection with these developments or otherwise, a Fund may experience increased portfolio turnover, which will increase the costs that the Fund incurs and may lower the Fund's performance. The liquidity levels of the Fund's investments may also be affected.

Further, bond markets have consistently grown over the past three decades while the capacity for traditional dealer counterparties to engage in fixed income trading has not kept pace and in some cases has decreased. As a result, dealer inventories of corporate bonds, which provide a core indication of the ability of financial intermediaries to "make markets," are at or near historic lows in relation to market size. This reduction in dealer inventories could potentially lead to decreased liquidity and increased volatility in the fixed income markets. If sudden or large-scale rises in interest rates were to occur, the Fund that invests in fixed income securities could also face above-average redemption requests, which could cause the Fund to lose value due to downward pricing forces and reduced market liquidity.

International Closed Market Trading Risk

To the extent that the underlying securities held by a Fund trade on foreign exchanges that may be closed when the securities exchange on which the Fund's shares trade is open, there are likely to be deviations between the current price of such an underlying security and the last quoted price for the underlying security (i.e., the Fund's quote from the closed foreign market). These deviations could result in premiums or discounts to a Fund's NAV that may be greater than those experienced by other exchange-traded funds ("ETFs").

Investable Universe of Companies Risk

Investable Universe of Companies Risk applies to the Global X MLP & Energy Infrastructure ETF.

The investable universe of companies in which a Fund may invest may be limited. If a company no longer meets the Index Provider's criteria for inclusion in the Underlying Index, a Fund may need to reduce or eliminate its holdings in that company. The reduction or elimination of a Fund's holdings in the company may have an adverse impact on the liquidity of the Fund's overall portfolio holdings and on Fund performance.

Investment Company Risk

Investment Company Risk applies to the Global X SuperDividend[®] Alternatives ETF.

The risks of investment in investment companies, such as CEFs and BDCs, typically reflect the risks of the types of instruments in which the investment companies invest. By investing in another investment company, the Fund becomes a shareholder of that investment company and bears its proportionate share of the fees and expenses of the other investment company.

Issuer Risk

Issuer risk is the risk that any of the individual companies that a Fund invests in may perform badly, causing the value of its securities to decline. Poor performance may be caused by poor management decisions, competitive pressures, changes in technology, disruptions in supply, labor problems or shortages, corporate restructurings, fraudulent disclosures or other factors. Issuers may, in times of distress or on their own discretion, decide to reduce or eliminate dividends, which would also cause their stock prices to decline.

Large-Capitalization Companies Risk

Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years.

Liquidity Risk

Liquidity Risk applies to the Global X MLP & Energy Infrastructure ETF and Global X SuperDividend[®] Alternatives ETF.

Although common units of MLPs trade on the NYSE and the NASDAQ, certain MLP securities may trade less frequently than those of larger companies due to their smaller capitalizations. In the event certain MLP securities experience limited trading

volumes, the prices of such MLPs may display abrupt or erratic movements at times. Additionally, it may be more difficult for a Fund to buy and sell significant amounts of such securities without an unfavorable impact on prevailing market prices. As a result, these securities may be difficult to dispose of at a fair price at the times when the Adviser believes it is desirable to do so. A Fund's investment in securities that are less actively traded or over time experience decreased trading volume may restrict its ability to take advantage of other market opportunities or to dispose of securities. This also may affect adversely a Fund's ability to make dividend distributions to you.

Listing Standards Risk

Under new continuous listing standards adopted by the Fund's listing exchange, the Fund will be required to confirm on an ongoing basis that the components of the Underlying Index satisfy the applicable listing requirements. In the event that the Underlying Index does not comply with the applicable listing requirements, the Fund would be required to rectify such non-compliance by requesting that the Index Provider modify the Underlying Index, adopting a new underlying index, or obtaining relief from the SEC. Failure to rectify such non-compliance may result in the Fund being delisted by the listing exchange.

Management Risk

Each Fund may not fully replicate its Underlying Index and may hold securities not included in its Underlying Index. Therefore, each Fund is subject to management risk. That is, the Adviser's investment strategy, the implementation of which is subject to a number of constraints, may cause a Fund to underperform the market or its relevant benchmark or adversely affect the ability of the Fund to achieve its investment objective. The ability of the Adviser to successfully implement each Fund's investment strategies will influence each Fund's performance significantly.

Market Risk

Market risk is the risk that the value of the securities in which a Fund invests may go up or down in response to the prospects of individual issuers and/or general economic conditions. Turbulence in the financial markets and reduced market liquidity may negatively affect issuers, which could have an adverse effect on a Fund. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, or other government actors, which could include increasing interest rates, could cause increased volatility in financial markets and lead to higher levels of Fund redemptions, which could have a negative impact on a Fund. A Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns.

Market Trading Risk

Absence of Active Market

Although Shares of a Fund are or will be listed for trading on a U.S. exchange and may be listed on certain foreign exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained.

Risks of Secondary Listings

A Fund's Shares may be listed or traded on U.S. and non-U.S. exchanges other than the U.S. exchange where the Fund's primary listing is maintained. There can be no assurance that a Fund's Shares will continue to trade on any such exchange or in any market or that a Fund's Shares will continue to meet the requirements for listing or trading on any exchange or in any market. A Fund's Shares may be less actively traded in certain markets than others, and investors are subject to the execution and settlement risks and market standards of the market where they or their broker direct their trades for execution. Certain information available to investors who trade Shares on a U.S. exchange during regular U.S. market hours may not be available to investors who trade in other markets, which may result in secondary market prices in such markets being less efficient.

Secondary Market Trading Risk

Shares of a Fund may trade in the secondary market on days when the Fund does not accept orders to purchase or redeem Shares. On such days, Shares may trade in the secondary market with more significant premiums or discounts than might be experienced on days when the Fund accepts purchase and redemption orders.

Secondary market trading in Fund Shares may be halted by a stock exchange because of market conditions or other reasons. In addition, trading in Fund Shares on a stock exchange or in any market may be subject to trading halts caused by extraordinary market volatility pursuant to "circuit breaker" rules on the stock exchange or market. There can be no assurance that the requirements necessary to maintain the listing or trading of Fund Shares will continue to be met or will remain unchanged.

Shares of the Funds May Trade at Prices Other Than NAV

Shares of a Fund may trade at, above or below NAV. The per share NAV of each Fund will fluctuate with changes in the market value of such Fund's holdings. The trading prices of Shares will fluctuate in accordance with changes in its NAV as well as market supply and demand. The trading prices of a Fund's Shares may deviate significantly from NAV during periods of market volatility. Any of these factors may lead to the Fund's Shares trading at a premium or discount to NAV. While the creation/redemption feature is designed to make it likely that Shares normally will trade close to the Fund's NAV, market prices are not expected to correlate exactly with a Fund's NAV due to timing reasons as well as market supply and demand factors. In addition, disruptions to creations and redemptions or the existence of extreme market volatility may result in trading prices that differ significantly from NAV. If a shareholder purchases at a time when the market price is at a premium to the NAV or sells at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Since foreign exchanges may be open on days when a Fund does not price Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell Shares.

Costs of Buying or Selling Fund Shares

Buying or selling Fund Shares involves two types of costs that apply to all securities transactions. When buying or selling Shares of a Fund through a broker, you will likely incur a brokerage commission or other charges imposed by brokers as determined by that broker. In addition, you may incur the cost of the "spread" - that is, the difference between what professional investors are willing to pay for Fund Shares (the "bid" price) and the market price at which they are willing to sell Fund Shares (the "ask" price). Because of the costs inherent in buying or selling Fund Shares, frequent trading may detract significantly from investment results and an investment in Fund Shares may not be advisable for investors who anticipate regularly making small investments.

Mid-Capitalization Companies Risk

Mid-capitalization companies may have greater price volatility, lower trading volume and less liquidity than large-capitalization companies. In addition, mid-capitalization companies may have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies.

MLP Risk

MLP Risk applies to the Global X MLP & Energy Infrastructure ETF and Global X SuperDividend[®] Alternatives ETF.

Investments in securities of MLPs involve risks that differ from an investment in common stock.

Holders of units of MLPs have more limited control rights and limited rights to vote on matters affecting the MLP as compared to holders of stock of a corporation. For example, MLP unit holders may not elect the general partner or the directors of the general partner and the MLP unit holders have limited ability to remove an MLP's general partner. MLPs are controlled by their general partners, which generally have conflicts of interest and limited fiduciary duties to the MLP, which may permit the general partner to favor its own interests over the MLPs. The Fund derives substantially all of its cash flow from investments in equity securities of MLPs. The amount of cash that a Fund will have available to pay or distribute to you depends entirely on the ability of the MLPs that the Fund owns to make distributions to their partners and the tax character of those distributions. Neither the Fund nor the Adviser has control over the actions of underlying MLPs. The amount of cash that each individual MLP can distribute to its partners will depend on the amount of cash it generates from operations, which will vary from quarter to quarter depending on factors affecting the energy infrastructure market generally and on factors affecting the particular business lines of the MLP. Available cash will also depend on the MLPs' level of operating costs (including incentive distributions to the general partner), level of capital expenditures, debt service requirements, acquisition costs (if any), fluctuations in working capital needs, and other factors. The Fund expects to generate significant investment income, and the Fund's investments may not distribute the expected or anticipated levels of cash, resulting in the risk that the Fund may not have the ability to make cash distributions as investors expect from MLP-focused investments.

Certain MLPs in which the Fund may invest depend upon their parent or sponsor entities for a majority of their revenues. If their parent or sponsor entities fail to make such payments or satisfy their obligations, the revenues and cash flows of such MLPs and ability of such MLPs to make distributions to unit holders, such as the Fund, would be adversely affected.

MLPs are subject to various federal, state and local environmental laws and health and safety laws as well as laws and regulations specific to their particular activities. These laws and regulations address: health and safety standards for the operation of facilities, transportation systems and the handling of materials; air and water pollution requirements and standards; solid waste disposal

requirements; land reclamation requirements; and requirements relating to the handling and disposition of hazardous materials. MLPs are subject to the costs of compliance with such laws applicable to them, and changes in such laws and regulations may adversely affect their results of operations.

MLPs are subject to numerous business related risks, including: deterioration of business fundamentals reducing profitability due to development of alternative energy sources, among other things, consumer sentiment, changing demographics in the markets served, unexpectedly prolonged and precipitous changes in commodity prices and increased competition that reduces the MLP's market share; the lack of growth of markets requiring growth through acquisitions; disruptions in transportation systems; the dependence of certain MLPs upon unrelated third parties; availability of capital for expansion and construction of needed facilities; a significant decrease in production due to depressed commodity prices or otherwise; the inability of MLPs to successfully integrate recent or future acquisitions; and the general level of the economy.

Non-Diversification Risk

Each Fund is classified as a "non-diversified" investment company under the 1940 Act. This means that each Fund may invest most of its assets in securities issued by or representing a small number of companies. As a result, each Fund may be more susceptible to the risks associated with these particular companies, or to a single economic, political or regulatory occurrence affecting these companies.

Operational Risk

Each Fund is exposed to operational risk arising from a number of factors, including but not limited to human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Passive Foreign Investment Company Risk

Passive Foreign Investment Company Risk applies to the Global X SuperDividend[®] Alternatives ETF.

Some Fund holdings may be characterized as "passive foreign investment companies" (PFICs) for U.S. tax purposes. In general, a foreign corporation is classified as a PFIC for a taxable year if at least one-half of its assets constitute investment-type assets or 75% or more of its gross income is investment-type income. If the Fund receives a so-called "excess distribution" with respect to PFIC stock, the Fund itself may be subject to tax on a portion of the excess distribution, whether or not the corresponding income is distributed by the Fund to stockholders. In general, under the PFIC rules, an excess distribution is treated as having been realized ratably over the period during which the Fund held the PFIC stock. The Fund itself will be subject to tax on the portion, if any, of an excess distribution that is so allocated to prior taxable years and an interest factor will be added to the tax, as if the tax had been payable in such prior taxable years. Certain distributions from a PFIC as well as gain from the sale of PFIC stock are treated as excess distributions. Excess distributions are characterized as ordinary income even though, absent application of the PFIC rules, certain excess distributions might have been classified as capital gain.

The Fund may be eligible to elect alternative tax treatment with respect to PFIC stock. Under an election that currently is available in some circumstances, the Fund generally would be required to include in its gross income its share of the earnings of a PFIC on a current basis, regardless of whether distributions are received from the PFIC in a given year. If this election were made, the special rules, discussed above, relating to the taxation of excess distributions, would not apply. Alternatively, another election may be available that would involve marking to market a Fund's PFIC shares at the end of each taxable year (and on certain other dates prescribed in the Internal Revenue Code of 1986, as amended (the "Code")), with the result that unrealized gains are treated as though they were realized and reported as ordinary income. Any mark-to-market losses and any loss from an actual disposition of PFIC shares would be deductible as ordinary losses to the extent of any net mark-to-market gains included in income with respect to such shares in prior years. If this election were made, tax at the Fund level under the PFIC rules would generally be eliminated, but the Fund could, in limited circumstances, incur nondeductible interest charges. The Fund's intention to qualify annually as a regulated investment company ("RIC") may limit its elections with respect to PFIC shares.

Because the application of the PFIC rules may affect, among other things, the character of gains and the amount of gain or loss and the timing of the recognition of income with respect to PFIC shares, and may subject the Fund itself to tax on certain income from PFIC shares, the amount that must be distributed to shareholders and will be taxed to shareholders as ordinary income or long-term capital gain may be increased or decreased substantially as compared to a fund that did not invest in PFIC shares.

Passive Investment Risk

Each Fund is not actively managed and may be affected by a general decline in market segments relating to the respective Underlying Index. Each Fund invests in securities included in, or representative of, the Underlying Index regardless of their investment merits. The Adviser does not attempt to take defensive positions in declining markets beyond the mechanics built into the Underlying Index. Unlike many investment companies, a Fund does not seek to outperform its Underlying Index. Therefore, a Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Underlying Index, even if that security generally is underperforming. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund's return to be lower than if the Fund employed an active strategy.

Preferred Stock Risk

Preferred Stock Risk applies to the Global X U.S. Preferred ETF.

Unlike interest payments on debt securities, dividend payments on a preferred stock typically must be declared by the issuer's board of directors. An issuer's board of directors is generally not under any obligation to pay a dividend (even if such dividends have accrued), and may suspend payment of dividends on preferred stock at any time. In the event an issuer of preferred stock experiences economic difficulties, the issuer's preferred stock may lose substantial value due to the reduced likelihood that the issuer's board of directors will declare a dividend and the fact that the preferred stock may be subordinated to other securities of the same issuer. Certain additional risks associated with preferred stock could adversely affect investments in the Funds.

Interest Rate Risk

Because many preferred stocks pay dividends at a fixed rate, their market price can be sensitive to changes in interest rates in a manner similar to bonds - that is, as interest rates rise, the value of the preferred stocks held by the Funds are likely to decline. To the extent that a Fund invests a substantial portion of its assets in fixed rate preferred stocks, rising interest rates may cause the value of the Fund's investments to decline significantly.

Issuer Risk

Because many preferred stocks allow holders to convert the preferred stock into common stock of the issuer, their market price can be sensitive to changes in the value of the issuer's common stock. To the extent that a Fund invests a substantial portion of its assets in convertible preferred stocks, declining common stock values may also cause the value of the Fund's investments to decline.

Dividend Risk

There is a chance that the issuer of any of a Fund's holdings will have its ability to pay dividends deteriorate or will default (fail to make scheduled dividend payments on the preferred stock or scheduled interest payments on other obligations of the issuer not held by the Fund), which would negatively affect the value of any such holding.

Call Risk

Preferred stocks are subject to market volatility and the prices of preferred stocks will fluctuate based on market demand. Preferred stocks often have call features which allow the issuer to redeem the security at its discretion. If a preferred stock is redeemed by the issuer, it will be removed from the Underlying Index. The redemption of preferred stocks having a higher than average yield may cause a decrease in the yield of the Underlying Index and a Fund.

Premium/Discount Risk

Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Potential Substantial After-Tax Tracking Error From Index Performance

Potential Substantial After-Tax Tracking Error From Index Performance applies to the Global X MLP & Energy Infrastructure ETF.

The Fund will be subject to taxation on its taxable income. The NAV of Shares will also be reduced by the accrual of any deferred tax liabilities. The Underlying Index, however, is calculated without any deductions for taxes. As a result, the Fund's after tax performance could differ significantly from the Underlying Index even if the pretax performance of each Fund and the performance of the Underlying Index are closely correlated.

Risk of Investing in Canada

Risk of Investing in Canada applies to the Global X MLP & Energy Infrastructure ETF.

The United States is Canada's largest trading and investment partner, and the Canadian economy is significantly affected by developments in the U.S. economy. Since the implementation of NAFTA in 1994 among Canada, the United States and Mexico, total two-way merchandise trade between the United States and Canada has more than doubled. To further this relationship, the three NAFTA countries entered into the Security and Prosperity Partnership of North America in March 2005, which has further affected Canada's dependency on the U.S. economy. Any downturn in U.S. or Mexican economic activity is likely to have an adverse impact on the Canadian economy. The Canadian economy is also dependent upon external trade with other key trading partners, including China and the EU. In addition, Canada is a large supplier of natural resources (e.g., oil, natural gas and agricultural products). As a result, the Canadian economy is sensitive to fluctuations in certain commodity prices.

Risks Related to Exposure to Non-Hedging Foreign Currency Trading

Risks Related to Exposure to Non-Hedging Foreign Currency Trading applies to the Global X SuperDividend[®] Alternatives ETF.

Certain of the Underlying Index components may engage in forward foreign currency transactions for speculative purposes. The Underlying Index component may purchase or sell foreign currencies through the use of forward contracts based on the applicable advisors' judgment regarding the direction of the market for a particular foreign currency or currencies. In pursuing this strategy, the advisors seek to profit from anticipated movements in currency rates by establishing "long" and/or "short" positions in forward contracts on various foreign currencies. Foreign exchange rates can be extremely volatile and a variance in the degree of volatility of the market or in the direction of the market from the advisors' expectations may produce significant losses to the Underlying Index component.

Risks Related to Exposure to Option Trading Strategies

Risk Related to Exposure to Option Trading Strategies applies to the Global X SuperDividend[®] Alternatives ETF.

Options are generally subject to volatile swings in price based on changes in value of the underlying instrument, and the options written by an Index constituent may be particularly subject to this risk because of the volatility of the underlying stocks selected by the Index constituent. The Index constituent may incur a form of economic leverage through its use of options, which will increase the volatility of the Index constituent's returns and may increase the risk of loss to the Index constituent. While the Index constituent will collect premiums on the options it writes, the Index constituent's risk of loss if one or more of its options is exercised and expires in-the-money may substantially outweigh the gains to the Index constituent from the receipt of such option premiums. Moreover, the options sold by the Index constituent may have imperfect correlation to the returns of their underlying stocks.

Risks Related to Investing in Actively Managed Portfolios

Risks Related to Investing in Actively Managed Portfolios applies to the Global X SuperDividend[®] Alternatives ETF.

Certain of the Underlying Index constituents are actively managed portfolios, and their success depends upon the investment skills and analytical abilities of the investment adviser to develop and effectively implement strategies to achieve the Underlying Index constituent's investment objective. Subjective decisions made by the investment adviser may cause the Index constituent to incur losses or to miss profit opportunities on which it may otherwise have capitalized.

Risks Related to Investing in Bonds

Risks Related to Investing in Bonds applies to the Global X SuperDividend[®] Alternatives ETF.

Investments in debt securities are generally affected by changes in prevailing interest rates and the creditworthiness of the issuer. Prices of debt securities fall when prevailing interest rates rise. The Fund's yield on investments in debt securities will fluctuate as the securities in the Fund are rebalanced and reinvested in securities with different interest rates. Investments in bonds are also

subject to credit risk. Credit risk is the risk that an issuer of debt securities will be unable to pay principal and interest when due, or that the value of the security will suffer because investors believe the issuer is less able to make required principal and interest payments. This is broadly gauged by the credit ratings of the debt securities in which the Fund invests. However, credit ratings are only the opinions of the rating agencies issuing them, do not purport to reflect the risk of fluctuations in market value and are not absolute guarantees as to the payment of interest and the repayment of principal.

Risks Related to Investing in Closed-End Funds

Risks Related to Investing in Closed-End Funds applies to the Global X SuperDividend[®] Alternatives ETF.

Common shares of closed-end management investment companies (“CEFs”) frequently trade at a discount from their net asset value. This risk may be greater if shares of the CEF are removed from the Underlying Index in a relatively short period of time after completion of the initial offering of the CEF.

Risks Related to Investing in ETFs

Risks Related to Investing in ETFs applies to the Global X SuperDividend[®] Alternatives ETF.

The Fund may hold ETFs to gain exposure to certain asset classes. As a result, the Fund may be subject to the same risks as the underlying ETFs. While the risks of owning shares of an underlying ETF generally reflect the risks of owning the underlying securities the ETF is designed to track, lack of liquidity in an underlying ETF can result in its value being more volatile than the underlying portfolio securities. Because the value of other ETF shares depends on the demand in the market, the Adviser may not be able to liquidate a Fund’s holdings in those shares at the most optimal time, thereby adversely affecting the Fund’s performance. In addition, ETF shares may trade at a premium or discount to net asset value.

In addition, investments in the securities of other ETFs, may involve duplication of advisory fees and certain other expenses. The Fund will pay brokerage commissions in connection with the purchase and sale of shares of ETFs, which could result in greater expenses to the Fund. By investing in another ETF, the Fund becomes a shareholder thereof. As a result, Fund shareholders indirectly bear the Fund’s proportionate share of the fees and expenses indirectly paid by shareholders of the other ETF, in addition to the fees and expenses Fund shareholders indirectly bear in connection with the Fund’s own operations. In addition, certain of the underlying ETFs may hold common portfolio positions, thereby reducing the diversification benefits of an asset allocation style.

If the other ETF fails to achieve its investment objective, the value of the Fund’s investment will decline, adversely affecting the Fund’s performance. ETFs that invest in commodities may be, or may become, subject to regulatory trading limits that could hurt the value of their securities and could affect the Fund’s ability to pursue its investment program as described in this Prospectus. Additionally, some ETFs are not registered under the 1940 Act and therefore, are not subject to the regulatory scheme and investor protections of the 1940 Act.

A complete list of each underlying ETF can be found daily on the Trust’s website. Each investor should review the complete description of the principal risks of each underlying ETF prior to investing in the Fund.

Risks Related to Investing in ETNs

Risks Related to Investing in ETNs applies to the Global X SuperDividend[®] Alternatives ETF.

The Fund may hold ETNs to gain exposure to certain asset classes. As a result, the Fund may be subject to the same risks as the underlying ETNs. An ETN may trade at a premium or discount to its net asset value. The Fund will indirectly bear its pro rata share of the fees and expenses incurred by an ETN it invests in, including advisory fees, and will pay brokerage commissions in connection with the purchase and sale of shares of ETNs.

ETNs that invest in commodities may be, or may become, subject to regulatory trading limits that could hurt the value of their securities and could affect the Fund’s ability to pursue its investment program as described in this prospectus. The value of an ETN may also differ from the valuation of its reference market due to changes in the issuer’s credit rating.

ETNs generally are senior, unsecured, unsubordinated debt securities issued by a sponsor, such as an investment bank. The value of an ETN may be influenced by time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in the underlying market, changes in the applicable interest rates, and economic, legal, political or geographic events that affect the referenced market. Because ETNs are debt securities, they are subject to credit risk. If the issuer has financial difficulties or goes bankrupt, a portfolio may not receive the return it was promised and could lose its entire investment. It is expected that an issuer’s

credit rating will be investment grade at the time of investment, however, the credit rating may be revised or withdrawn at any time and there is no assurance that a credit rating will remain in effect for any given time period. If a rating agency lowers the issuer's credit rating, the value of the ETN may decline and a lower credit rating reflects a greater risk that the issuer will default on its obligation.

There may be restrictions on a portfolio's right to redeem its investment in an ETN, which are meant to be held until maturity. There are no periodic interest payments for ETNs, and principal is not protected. As is the case with ETFs, an investor could lose some of or the entire amount invested in ETNs. A portfolio's decision to sell its ETN holdings may be limited by the availability of a secondary market.

Risks Related to Investing in Leveraged Portfolios

Risks Related to Investing in Leveraged Portfolios applies to the Global X SuperDividend[®] Alternatives ETF.

Certain of the Underlying Index constituents may engage in transactions that give rise to leverage. Such transactions may include, among others, reverse repurchase agreements, securities lending, forward commitment transactions, short sales and certain derivative transactions. The use of leverage may cause the Underlying Index constituent to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations or to meet segregation requirements. Leverage may cause the Underlying Index constituent's share price to be more volatile than if it had not been leveraged, as certain types of leverage may exaggerate the effect of any increase or decrease in the value of the Underlying Index constituent's portfolio securities. The loss on leveraged investments may substantially exceed the initial investment.

Risks Related to Investing in Listed Private Equity Companies

Risks Related to Investing in Listed Private Equity Companies applies to the Global X SuperDividend[®] Alternatives ETF.

There are certain risks inherent in investing in listed private equity companies, which encompass BDCs and other financial institutions or vehicles whose principal business is to invest in and lend capital to, or provide services to privately held companies. The 1940 Act, imposes certain restraints upon the operations of a BDC. For example, BDCs are required to invest at least 70% of their total assets primarily in securities of private companies or thinly traded U.S. public companies, cash, cash equivalents, U.S. government securities and high quality debt investments that mature in one year or less. Generally, little public information exists for private and thinly traded companies, and there is a risk that investors may not be able to make a fully informed investment decision. With investments in debt instruments, there is a risk that the issuer may default on its payments or declare bankruptcy. Additionally, a BDC may incur indebtedness only in amounts such that the BDC's asset coverage equals at least 200% after such incurrence. These limitations on asset mix and leverage may prohibit the way that the BDC raises capital. BDCs generally invest in less mature private companies, which involve greater risk than well-established, publicly-traded companies.

Risks Related to Investing in the Energy Infrastructure Industry Sector

Risks Related to Investing in the Energy Infrastructure Industry Sector applies to the Global X MLP & Energy Infrastructure ETF.

Companies engaged in the energy infrastructure sector also are subject to risks specific to the industry they serve. Risks inherent in the energy infrastructure business include the following:

A sustained decline in demand for crude oil, natural gas and refined petroleum products could adversely affect revenues and cash flows. Factors that could lead to a decrease in market demand include a recession or other adverse economic conditions, an increase in the market price of the underlying commodity, higher taxes or other regulatory actions that increase costs, or a shift in consumer demand for such products. Demand may also be adversely impacted by consumer sentiment with respect to global warming and/or by any state or federal legislation intended to promote the use of alternative energy sources, such as bio-fuels.

Companies engaged in the energy infrastructure sector employ a variety of means of increasing cash flow, including increasing utilization of existing facilities, expanding operations through new construction, expanding operations through acquisitions, or securing additional long-term contracts. Thus, some companies engaged in the energy infrastructure sector may be subject to construction risk, acquisition risk or other risk factors arising from their specific business strategies. A significant slowdown in large energy companies' disposition of energy infrastructure assets and other merger and acquisition activity in the energy infrastructure industry could reduce the growth rate of cash flows received by the Fund from companies engaged in the energy infrastructure sector that grow through acquisitions.

The volatility of energy commodity prices can indirectly affect certain entities engaged in the energy infrastructure sector due to the impact of prices on the volume of commodities transported, processed, stored or distributed. Most energy infrastructure entities are not subject to direct commodity price exposure because they do not own the underlying energy commodity. Nonetheless, the price of an energy infrastructure security can be adversely affected by the perception that the performance of all such entities is directly tied to commodity prices.

In addition, a significant decrease in the production of natural gas, oil or other energy commodity due to a decline in production from existing facilities, import supply disruption or otherwise would reduce revenue and operating income of certain MLPs in the energy infrastructure sector and, therefore, the ability of MLPs to make distributions would be reduced.

The profitability of companies engaged in the energy infrastructure sector could be adversely affected by changes in the regulatory environment. Most assets of such companies are heavily regulated by federal and state governments in diverse matters, such as the way in which such company assets are constructed, maintained and operated and the prices such companies may charge for their services. Such regulation can change over time in scope and intensity. For example, a particular by-product of a process may be declared hazardous by a regulatory agency and unexpectedly increase production costs for a company engaged in the energy infrastructure sector. Moreover, many state and federal environmental laws provide for civil as well as regulatory remediation, thus adding to the potential exposure such a company may face.

Extreme weather patterns could result in significant volatility in the supply of energy and power and could adversely impact the value of the securities in which the Fund invests. This volatility may create fluctuations in commodity prices and earnings of companies in the energy infrastructure industry.

A rising interest rate environment could adversely impact the performance of companies engaged in the energy infrastructure sector. Rising interest rates could limit the capital appreciation of equity units of such companies as a result of the increased availability of alternative investments at competitive yields. Rising interest rates may increase the cost of capital for companies operating in this industry. A higher cost of capital could limit growth from acquisition or expansion projects, limit the ability of such entities to make or grow distributions or meet debt obligations, and adversely affect the prices of their securities.

Since the September 11th terrorist attacks, the U.S. government has issued warnings that energy assets, specifically U.S. pipeline infrastructure, may be targeted in future terrorist attacks. These dangers give rise to risks of substantial losses as a result of loss or destruction of commodity reserves; damage to or destruction of property, facilities and equipment; pollution and environmental damage; and personal injury or loss of life. Any occurrence of such catastrophic events could bring about a limitation, suspension or discontinuation of the operations of companies in the North American energy infrastructure sector. Companies in the North American energy infrastructure sector may not be fully insured against all risks inherent in their business operations and therefore accidents and catastrophic events could adversely affect such companies' financial condition and ability to pay distributions to shareholders.

Risks Related to Investing in the Energy Sector

Risks Related to Investing in the Energy Sector applies to the Global X MLP & Energy Infrastructure ETF.

Securities of companies in the energy sector are subject to swift energy price and supply fluctuations caused by events relating to international politics, energy conservation, the success of exploration projects, and tax and other governmental regulatory policies. Weak demand for the companies' products or services or for energy products and services in general, as well as negative developments in these other areas, would adversely impact the Fund's performance. Companies in the oil and gas sector (including alternative energy suppliers) may be adversely affected by natural disasters or other catastrophes, and may be at risk for environmental damage claims. These companies may also be adversely affected by changes in exchange rates, interest rates, economic conditions or world events in the regions where the companies operate (i.e., expropriation, nationalization, confiscation of assets and coups, social unrest, violence or labor unrest). Most or all of the Fund's investments are in companies located in emerging market countries, which may heighten these risks. Companies engaged in the distribution of energy, including electricity and gas, may be adversely affected by governmental limitation on rates charged to customers. Deregulation and greater competition may adversely affect the profitability of these companies and lead to diversification outside of their original geographic regions and their traditional lines of business, potentially increasing risk and making the price of their equity securities more volatile.

Risks Related to Investing in the Financials Sector

Risks Related to Investing in the Financials Sector applies to the Global X SuperDividend[®] Alternatives ETF and Global X U.S. Preferred ETF.

Companies in the financials sector are subject to extensive governmental regulation, which may adversely affect the scope of their activities, the prices they can charge and the amount of capital they must maintain. Governmental regulation may change frequently. The financials sector is exposed to risks that may impact the value of investments in the financials sector more severely than investments outside this sector, including operating with substantial financial leverage. The financials sector may also be adversely affected by increases in interest rates and loan losses, decreases in the availability of money or asset valuations and adverse conditions in other related markets. Additionally, the deterioration of the credit markets during the 2007-2008 global financial crisis caused an adverse impact in a broad range of mortgage, asset-backed, auction rate and other markets, including U.S. and international credit and interbank money markets generally, thereby affecting a wide range of financial services institutions and markets. This situation created instability in the financial services markets and caused certain financial services companies to incur large losses or even become insolvent or bankrupt. Some financial services companies experienced downgrades in their credit ratings, declines in the valuations of their assets, took action to raise capital (such as the issuance of debt or equity securities), or even ceased operations. These actions caused the securities of many financial services companies to decline in value. Securities in the financial sector could replicate similar effects if credit markets were to be substantially affected again. Insurance companies may be subject to severe price competition. Adverse economic, business or political developments affecting real estate, which may include, but are not limited to, possible declines in the value of real estate, adverse changes in national, state or local real estate conditions; obsolescence of properties; changes in the availability, cost and terms of mortgage funds (including changes in interest rates), the impact of changes in environmental laws, overbuilding in a real estate company's market, and environmental problems, could have a major effect on the value of real estate securities (which include REITs).

Risks Related to Investing in the Infrastructure Industry

Risks Related to Investing in the Infrastructure Industry applies to the Global X SuperDividend[®] Alternatives ETF.

Companies in the infrastructure industry may be subject to a variety of factors that could adversely affect their business or operations, including high interest costs in connection with capital construction programs, high degrees of leverage, costs associated with governmental, environmental and other regulations, the effects of economic slowdowns, increased competition from other providers of services, uncertainties concerning costs, the level of government spending on infrastructure projects, and other factors. Infrastructure companies may be adversely affected by commodity price volatility, changes in exchange rates, import controls, depletion of resources, technological developments, and labor relations. There is also the risk that corruption may negatively affect publicly funded infrastructure projects, especially in emerging markets, resulting in delays and cost overruns. Infrastructure issuers can be significantly affected by government spending policies because companies involved in this industry rely to a significant extent on U.S. and other government demand for their products.

Infrastructure companies in the oil and gas industry may be adversely affected by government regulation or world events in the regions that the companies operate (e.g., expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and repatriation of capital, military coups, social unrest, violence or labor unrest). Infrastructure companies may have significant capital investments in, or engage in transactions involving, emerging market countries, which may heighten these risks.

Operations Risk

The failure of an infrastructure company to carry adequate insurance or to operate its assets appropriately could lead to significant losses. Infrastructure may be adversely affected by environmental clean-up costs and catastrophic events such as earthquakes, hurricanes and terrorist acts.

Customer Risk

Infrastructure companies can be dependent upon a narrow customer base. Additionally, if these customers fail to pay their obligations, significant revenues could be lost and may not be replaceable.

Regulatory Risk

Infrastructure companies may be subject to significant regulation by various governmental authorities and also may be affected by regulation of rates charged to customers, service interruption due to environmental, operational or other events, the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards.

Strategic Asset Risk

Infrastructure companies may control significant strategic assets (e.g., major pipelines or highways), which are assets that have a national or regional profile, and may have monopolistic characteristics. Given their national or regional profile or irreplaceable nature, strategic assets could generate additional risk not common in other industry sectors and they may be targeted for terrorist acts or adverse political actions.

Interest Rate Risk

Rising interest rates could result in higher costs of capital for infrastructure companies, which could negatively impact their ability to meet payment obligations.

Leverage Risk

Infrastructure companies can be highly leveraged which increases investments risk and other risks normally associated with debt financing, and could adversely affect an infrastructure company's operations and market value in periods of rising interest rates.

Inflation Risk

Many infrastructure companies may have fixed income streams. Consequently, their market values may decline in times of higher inflation. Additionally, the prices that an infrastructure company is able to charge users of its assets may be linked to inflation, whether by government regulation, contractual arrangement or other factors. In this case, changes in the rate of inflation may affect the company's profitability.

Transportation Risk

The stock prices of companies in the transportation industry group are affected by both supply and demand for their specific product. Government regulation, world events and economic conditions may affect the performance of companies in the transportation sector.

Oil and Gas Risk

The profitability of oil and gas companies is related to worldwide energy prices, exploration, and production spending.

Securities Lending Risk

Securities Lending Risk applies to the Global X MLP Energy & Infrastructure ETF.

The Fund may engage in lending its portfolio securities. The Fund may lend its portfolio securities to the extent noted under Fund Summaries-Principal Investment Strategies in this Prospectus. In connection with such loans, the Fund receives liquid collateral equal to at least 102% of the value of domestic equity securities and ADRs and 105% of the value of the foreign equity securities (other than ADRs) being lent. This collateral is marked-to-market on a daily basis. Although the Fund will receive collateral in connection with all loans of its securities holdings, the Fund would be exposed to a risk of loss should a borrower default on its obligation to return the borrowed securities (e.g., the loaned securities may have appreciated beyond the value of the collateral held by the Fund). In addition, the Fund will bear the risk of loss of any cash collateral that it invests. Also, as securities on loan may not be voted by the Fund, there is a risk that the Fund may not be able to recall the securities in sufficient time to vote on material proxy matters.

Short Sale Risk

Short Sale Risk applies to the Global X SuperDividend[®] Alternatives ETF.

Certain of the Underlying Index constituents in which the Fund invests may engage in short sale transactions. Short sale risks include, among others, the potential loss of more money than the actual cost of the investment, and the risk that the third party to the short sale may fail to honor its contract terms, causing a loss to the Underlying Index constituent.

Small-Capitalization Companies Risk

Small-Capitalization Companies Risk applies to the Global X SuperDividend[®] Alternatives ETF.

A Fund may invest a significant percentage of its assets in small-capitalization companies. If it does so, it may be subject to certain risks associated with small-capitalization companies. These companies often have greater price volatility, lower trading volume and less liquidity than larger, more established companies. In addition, these companies are often subject to less analyst coverage and may be in early and less predictable periods of their corporate existences. These companies tend to have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than larger companies.

Strategy Risk

Strategy Risk applies to the Global X SuperDividend[®] Alternatives ETF.

There is no guarantee that the Underlying Index will outperform any alternative strategy that might be employed in respect of the component assets or that past volatilities and correlations of particular asset classes will be indicative of future results.

Tax Risks

Tax Risks applies to the Global X MLP & Energy Infrastructure ETF.

In addition to other risk considerations, an investment in the Fund's shares will involve certain tax risks, including, but not limited to, the risks summarized below and discussed in more detail elsewhere in this Prospectus. Tax matters are complicated, and the federal, state, local and foreign tax consequences of the purchase and ownership of the Fund's shares will depend on the facts of each investor's situation. Prospective investors are encouraged to consult their own tax advisors regarding the specific tax consequences that may affect the investment in the Fund.

MLP Tax Risk

The benefit you are expected to derive from the Fund's investment in MLPs depends largely on the MLPs being treated as partnerships for federal income tax purposes. As a partnership, an MLP has no federal income tax liability at the entity level. If, as a result of a change in current law or a change in an MLP's business, an MLP were treated as a corporation for federal income tax purposes, the MLP would be obligated to pay federal income tax on its income at the corporate tax rate. If an MLP were classified as a corporation for federal income tax purposes, the amount of cash available for distribution would be reduced and part or all of the distributions the Fund receives might be taxed entirely as dividend income. Therefore, treatment of one or more MLPs as a corporation for federal income tax purposes could affect the Fund's ability to meet its investment objective and would reduce the amount of cash available to pay or distribute to you. The tax treatment of publicly traded partnerships could be subject to potential legislative, judicial, or administrative changes and differing interpretations, possibly on a retroactive basis. Any such changes could negatively impact the value of an investment in MLPs and therefore the value of your investment in the Fund.

Return of Capital Distributions From a Fund Reduce the Tax Basis of Fund Shares

A portion of the Fund's distributions are expected to be treated as a return of capital for tax purposes. Return of capital distributions are not taxable income to you, but reduce your tax basis in your Fund Shares. Such a reduction in tax basis will result in larger taxable gains and/or lower tax losses on a subsequent sale of Fund Shares. Shareholders who sell their Shares for less than they bought them may still recognize a gain due to the reduction in tax basis. Shareholders who periodically receive the payment of dividends or other distributions consisting of a return of capital may be under the impression that they are receiving net profits from the Fund when, in fact, they are not. Shareholders should not assume that the source of the distributions is from the net profits of the Fund. To the extent that the distributions paid to you constitute a return of capital, the Fund's assets will decline. A decline in the Fund's assets may also result in an increase in the portion of a Fund's expense ratio that is not subject to a unitary fee or any other form of contractual cap, and over time the distributions paid in excess of net distributions received could work to erode the Fund's net asset value.

Tax Treaty Reclaims Uncertainty

Tax Treaty Reclaims Uncertainty applies to the Global X MLP & Energy Infrastructure ETF.

The Fund has accrued for certain tax reclaims eligible under current bilateral double taxation treaties between the United States government and foreign governments. It is possible that the Fund ultimately may not be able to recover some or all of the outstanding tax reclaims, which may adversely affect the valuation of the Fund.

Tracking Error Risk

Tracking error is the divergence of a Fund's performance from that of its Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in a Fund's portfolio and those included in its Underlying Index, pricing differences (including differences between a security's price at the local market close and a Fund's valuation of a security at the time of calculation of the Fund's NAV), differences in transaction costs, a Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Underlying Index or the costs to a Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because a Fund incurs fees and expenses, while the Underlying Index does not. Index ETFs that track indices with significant weight in emerging markets issuers may experience higher tracking error other than other ETFs that do not track such indices.

Trading Halt Risk

An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in a Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

U.S. Economic Risk

The United States is a significant trading partner of or foreign investor in certain countries in which the Fund invests and the economies of these countries may be particularly affected by changes in the U.S. economy. Decreasing U.S. imports, new trade regulations, changes in the U.S. dollar exchange rate, a recession in the United States or increases in foreclosure rates may have a material adverse effect on economies of the countries in which such Fund invests.

Valuation Risk

The sales price the Fund could receive for a security may differ from the Fund's valuation of the security and may differ from the value used by the Underlying Index, particularly for securities that trade in low value or volatile markets or that are valued using a fair value methodology. Because non-U.S. exchanges may be open on days when the Fund does not price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

A FURTHER DISCUSSION OF OTHER RISKS

The Fund may also be subject to certain other risks associated with its investments and investment strategies.

Industry Specific Risk

Exploration and Production

Exploration and production MLPs are particularly vulnerable to declines in the demand for and prices of crude oil and natural gas. Reductions in prices for crude oil and natural gas can cause a given reservoir to become uneconomic for continued production earlier than it would if prices were higher, resulting in the plugging and abandonment of, and cessation of production from, that reservoir. In addition, lower commodity prices not only reduce revenues but also can result in substantial downward adjustments in reserve estimates. The accuracy of any reserve estimate is a function of the quality of available data, the accuracy of assumptions regarding future commodity prices and future exploration and development costs and engineering and geological interpretations and judgments. Different reserve engineers may make different estimates of reserve quantities and related revenue based on the same data. Actual oil and gas prices, development expenditures and operating expenses will vary from those assumed in reserve estimates, and these variances may be significant. Any significant variance from the assumptions used could result in the actual quantity of reserves and future net cash flow being materially different from those estimated in reserve reports. In addition, results of drilling, testing and production and changes in prices after the date of reserve estimates may result in downward revisions to such estimates. Substantial downward adjustments in reserve estimates could have a material adverse effect on a given exploration and production company's financial position and results of operations. In addition, due to natural declines in reserves and production, exploration and production companies must economically find or acquire and develop additional reserves in order to maintain and grow their revenues and distributions. Exploration and production MLPs seek to reduce cash flow volatility associated with

commodity prices by executing multi-year hedging strategies that fix the price of gas and oil produced. There can be no assurance that the hedging strategies currently employed by these MLPs are currently effective or will remain effective.

Propane

Propane MLPs are distributors of propane to homeowners for space and water heating. MLPs with propane assets are subject to earnings variability based upon weather conditions in the markets they serve, fluctuating commodity prices, customer conservation and increased use of alternative fuels, increased governmental or environmental regulation, and accidents or catastrophic events, among others.

Natural Resource

MLPs with coal, timber, fertilizer and other mineral assets are subject to supply and demand fluctuations in the markets they serve, which will be impacted by a wide range of domestic and foreign factors, including fluctuating commodity prices, the level of their customers' coal stockpiles, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, declines in production, mining accidents or catastrophic events, health claims and economic conditions, among others. In light of increased state and federal regulation, it has been increasingly difficult to obtain and maintain the permits necessary to mine coal. Further, such permits, if obtained, have increasingly contained more stringent, and more difficult and costly to comply with, provisions relating to environmental protection.

Leverage Risk

Under the 1940 Act, a Fund is permitted to borrow from a bank up to 33 1/3% of its net assets for short term or emergency purposes. Each Fund may borrow money at fiscal quarter end to maintain the required level of diversification to qualify as a regulated investment company ("RIC") for purposes of the Code. As a result, a Fund may be exposed to the risks of leverage, which may be considered a speculative investment technique. Leverage magnifies the potential for gain and loss on amounts invested and therefore increase the risks associated with investing in a Fund. If the value of a Fund's assets increases, then leveraging would cause the Fund's NAV to increase more sharply than it would have had the Fund not leveraged. Conversely, if the value of a Fund's assets decreases, leveraging would cause the Fund's NAV to decline more sharply than it otherwise would have had the Fund not leveraged. A Fund may incur additional expenses in connection with borrowings.

Qualification as a Regulated Investment Company Risk

Each Fund must meet a number of diversification requirements to qualify as a RIC under Section 851 of the Code and, if qualified, to continue to qualify. If a Fund experiences difficulty in meeting those requirements for any fiscal quarter, it might enter into borrowings in order to increase the portion of the Fund's total assets represented by cash, cash items, and U.S. government securities shortly thereafter and, as of the close of the following fiscal quarter, to attempt to meet the requirements. However, a Fund may incur additional expenses in connection with any such borrowings, and increased investments by the Fund in cash, cash items, and U.S. government securities (whether the Funds make such investments from borrowings) are likely to reduce the Fund's return to investors.

PORTFOLIO HOLDINGS INFORMATION

A description of the Trust's policies and procedures with respect to the disclosure of the Funds' portfolio securities is available in the Funds' combined SAI. The top holdings of each Fund and Fund fact sheets providing information regarding each Fund's top holdings can be found at www.globalxfunds.com and may be requested by calling 1-888-GX-Fund-1 (1-888-493-8631).

FUND MANAGEMENT

Investment Adviser

Global X Management Company LLC (the "Adviser") serves as the investment adviser and the administrator for each Fund. Subject to the supervision of the Board of Trustees, the Adviser is responsible for managing the investment activities of each Fund and each Fund's business affairs and other administrative matters. The Adviser has been a registered investment adviser since 2008. The Adviser is a Delaware limited liability company with its principal offices located at 600 Lexington Avenue, 20th Floor, New York, New York 10022. As of March 16, 2018, the Adviser provided investment advisory services for assets of approximately \$10.1 billion. On February 12, 2018, the Adviser entered into an agreement and plan of merger pursuant to which an indirect wholly-owned subsidiary of Mirae Asset Global Investments Co., Ltd. ("Mirae") would be merged with and into the Adviser (the "Transaction"). As a result of the merger, upon completion of the Transaction, the Adviser will become an indirect wholly-owned

subsidiary of Mirae. The Transaction is expected to close in the third quarter of 2018 pending receipt of certain regulatory approvals and subject to the satisfaction of other customary closing conditions. There can be no assurance that the Transaction will be consummated as contemplated or that necessary conditions will be satisfied.

Pursuant to a Supervision and Administration Agreement and subject to the general supervision of the Board of Trustees of the Trust, the Adviser provides or causes to be furnished all supervisory, administrative and other services reasonably necessary for the operation of each Fund and also bears the costs of various third-party services required by each Fund, including audit, certain custody, portfolio accounting, legal, transfer agency and printing costs. The Supervision and Administration Agreement also requires the Adviser to provide investment advisory services to each Fund pursuant to an Investment Advisory Agreement.

Each Fund pays the Adviser a fee ("Management Fee") in return for providing investment advisory, supervisory and administrative services under an all-in fee structure. For the fiscal year ended November 30, 2017, the Funds paid a monthly Management Fee to the Adviser at the following annual rates (stated as a percentage of the average daily net assets of each Fund taken separately):

<u>Fund</u>	<u>Management Fee</u>
Global X MLP & Energy Infrastructure ETF	0.45%
Global X SuperDividend [®] Alternatives ETF	0.75%
Global X U.S. Preferred ETF	0.23%

In addition, each Fund bears other fees and expenses that are not covered by the Supervision and Administration Agreement, which may vary and will affect the total expense ratio of each Fund, such as taxes, brokerage fees, commissions and other transaction expenses, interest and extraordinary expenses (such as litigation and indemnification expenses). The Adviser may earn a profit on the Management Fee paid by each Fund. Also, the Adviser, and not shareholders of the Funds, would benefit from any price decreases in third-party services, including decreases resulting from an increase in net assets.

Approval of Advisory Agreement

A discussion regarding the basis for the Board of Trustees' approval of the Supervision and Administration Agreement and the related Investment Advisory Agreement for each Fund is available in the Funds' Annual Report to Shareholders for the fiscal year ended November 30th.

Portfolio Management

The Portfolio Managers who are currently responsible for the day-to-day management of the Funds' portfolios are Chang Kim, James Ong, and Nam To.

Chang Kim: Chang Kim, CFA, joined the Adviser in September 2009. He currently holds the position of Senior Vice President with the Adviser. Mr. Kim received his Bachelor of Arts from Yale University in 2009.

James Ong: James Ong, CFA, joined the Adviser in July 2014 and was promoted to Associate Vice President in February 2017. Previously, Mr. Ong served for two years as an investment banker in the Media & Telecom group at Jefferies. Mr. Ong received his Bachelor in Economics from Harvard University in 2012.

Nam To: Nam To joined the Adviser in July 2017 as a Portfolio Management Analyst. Previously, Mr. To was a Global Economics Research Analyst at Bunge Limited from 2014 through 2017 and an Advisory and Investment Analyst at Horizon Capital Group from June 2013 through August 2013. Mr. To received his Bachelor of Arts in Philosophy and Economics from Cornell University in 2014.

The SAI provides additional information about the Portfolio Managers' compensation structure, other accounts managed by the Portfolio Managers, and the Portfolio Managers' ownership of Shares of the Funds.

DISTRIBUTOR

SEI Investments Distribution Co. ("Distributor") distributes Creation Units for the Funds on an agency basis. The Distributor does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by each Fund. The Distributor's principal address is One Freedom Valley Drive, Oaks, PA 19456. The Distributor is not affiliated with the Adviser.

BUYING AND SELLING FUND SHARES

Shares of the operational Funds trade on the national securities exchanges and in the secondary market during the trading day. Shares can be bought and sold throughout the trading day like other shares of publicly-traded securities. There is no minimum investment for purchases made on the national securities exchanges. When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges. In addition, you will also incur the cost of the “spread,” which is the difference between what professional investors are willing to pay for Shares (the “bid” price) and the price at which they are willing to sell Shares (the “ask” price). The commission is frequently a fixed amount and may be a significant proportional cost for investors seeking to buy or sell small amounts of Shares. The spread with respect to Shares varies over time based on a Fund’s trading volume and market liquidity, and is generally lower if the Fund has a lot of trading volume and market liquidity and higher if the Fund has little trading volume and market liquidity. Because of the costs of buying and selling Shares, frequent trading may reduce investment return.

Shares of a Fund may be acquired or redeemed directly from the Fund only by Authorized Participants (as defined in the SAI) and only in Creation Units or multiples thereof, as discussed in the "Creations and Redemptions" section in the SAI. Under normal circumstances, the Funds will pay out redemption proceeds to a redeeming Authorized Participant within two days after the Authorized Participant’s redemption request is received, in accordance with the process set forth in the Funds' SAI and in the agreement between the Authorized Participant and the Funds' distributor. However, the Funds reserve the right, including under stressed market conditions, to take up to seven days after the receipt of a redemption request to pay an Authorized Participant, all as permitted by the 1940 Act. The Funds anticipate regularly meeting redemption requests primarily through in-kind redemptions. However, the Fund reserves the right to pay redemption proceeds to an Authorized Participant in cash, consistent with the Trust's exemptive relief. Cash used for redemptions will be raised from the sale of portfolio assets or may come from existing holdings of cash or cash equivalents.

Shares generally trade in the secondary market in amounts less than a Creation Unit. Shares of the Funds trade under the trading symbols listed for each Fund in the Fund Summaries section of this Prospectus.

The Funds are listed on a national securities exchange, which is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

Book Entry

Shares of the Funds are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares and is recognized as the owner of all Shares for all purposes.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants include DTC, securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any rights as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any securities that you hold in book entry or “street name” form.

FREQUENT TRADING

Unlike frequent trading of shares of a traditional open-end mutual fund (i.e., not exchange-traded shares), frequent trading of Shares on the secondary market does not disrupt portfolio management, increase a Fund's trading costs, lead to realization of capital gains, or otherwise harm Fund shareholders because these trades do not involve the Fund directly. A few institutional investors are authorized to purchase and redeem each Fund's Shares directly with the Fund. When these trades are effected in-kind (i.e., for securities, and not for cash), they do not cause any of the harmful effects (noted above) that may result from frequent cash trades. Moreover, each Fund imposes transaction fees on in-kind purchases and redemptions of the Fund intended to cover the custodial and other costs incurred by the Fund in effecting in-kind trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that the Fund’s trading costs increase in those circumstances, although transaction fees are subject to certain limits and therefore may not cover all related costs incurred by a Fund. For these reasons, the Board of Trustees has determined that it is not necessary to adopt policies and procedures to detect and deter frequent trading and market-timing in Shares of the Funds.

DISTRIBUTION AND SERVICES PLAN

The Board of Trustees of the Trust has adopted a Distribution and Services Plan ("Plan") pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, each Fund is authorized to pay distribution fees in connection with the sale and distribution of its Shares and pay service fees in connection with the provision of ongoing services to shareholders of each class and the maintenance of shareholder accounts in an amount up to 0.25% of its average daily net assets each year.

No Rule 12b-1 fees are currently paid by a Fund, and there are no current plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because these fees are paid out of each Fund's assets on an ongoing basis, these fees will increase the cost of your investment in a Fund. By purchasing Shares subject to distribution fees and service fees, you may pay more over time than you would by purchasing Shares with other types of sales charge arrangements. Long-term shareholders may pay more than the economic equivalent of the maximum front-end sales charge permitted by the rules of FINRA. The net income attributable to Shares will be reduced by the amount of distribution fees and service fees and other expenses of a Fund.

DIVIDENDS AND DISTRIBUTIONS

Net Investment Income and Capital Gains. As a Fund shareholder, you are entitled to your share of the Fund's distributions of net investment income and net realized capital gains on its investments. Each Fund pays out substantially all of its net earnings to its shareholders as "distributions."

It is the policy of the Trust each fiscal year to distribute substantially all of each Fund's net investment income (i.e., generally, the income earned from cash distributions and interest on investments, and any capital gains, net of each Fund's expenses). A portion of each Fund's distributions are also expected to be treated as a return of capital for tax purposes.

The Trust is an open-end registered investment company under the 1940 Act. As such, each Fund is generally limited under the 1940 Act to one distribution in any one taxable year of long-term capital gains realized by each Fund. In this regard, that portion of a Fund's income which consists of gain realized by each Fund on a sale of equity units in an MLP (other than the portion of such gain representing recapture income) may constitute long-term capital gain subject to this limitation. Cash distributions received by a Fund from the MLPs in which such Fund invests generally will not constitute long-term capital gain, except to the extent that (i) such MLP distributions relate to long-term capital gain realized by the MLP on a sale by the MLP of its assets or (ii) the distributions received from a particular MLP exceed such Fund's tax basis in its equity units in such MLP. A Fund does not expect that a material portion of the cash distributions it receives from MLPs in which it invests will constitute long-term capital gain.

A Fund may determine to distribute at least annually amounts representing the full dividend yield net of expenses on the underlying investment securities, as if the Fund owned the underlying investment securities for the entire dividend period in which case some portion of each distribution may result in a return of capital. You will be notified regarding the portion of the distribution which represents a return of capital. Distributions in cash may be reinvested automatically in additional Shares of the applicable Fund only if the broker through which you purchased Shares makes such option available.

TAXES

The following is a summary of certain tax considerations that may be relevant to an investor in the Global X MLP & Energy Infrastructure ETF, Global X SuperDividend[®] Alternatives ETF, and Global X U.S. Preferred ETF. Except where otherwise indicated, the discussion relates to investors who are individual United States citizens or residents and is based on current tax law. You should consult your tax advisor for further information regarding federal, state, local and/or foreign tax consequences relevant to your specific situation.

Distributions. Each Fund receives income and gains on its investments. The income, less expenses incurred in the operation of each Fund, constitutes each Fund's net investment income from which dividends may be paid to you. Each Fund intends to qualify as a regulated investment company ("RIC") under the Internal Revenue Code of 1986, as amended (the "Code") for federal tax purposes and to distribute to shareholders substantially all of its net investment income and net capital gain each year. Except as otherwise noted below, you will generally be subject to federal income tax on each Fund's distributions to you. For federal income tax purposes, Fund distributions attributable to short-term capital gains and net investment income are taxable to you as ordinary income. Distributions attributable to net capital gains (the excess of net long-term capital gains over net short-term capital losses) of each Fund generally are taxable to you as long-term capital gains. This is true no matter how long you own your Shares or whether you take distributions in cash of additional Shares. The maximum long-term capital gain rate applicable to individuals is 20%.

Distributions of “qualifying dividends” will also generally be taxable to you at long-term capital gain rates as long as certain requirements are met. In general, if 95% or more of the gross income of each Fund (other than net capital gain) consists of dividends received from domestic corporations or “qualified” foreign corporations (“qualifying dividends”), then all distributions received by individual shareholders of a Fund will be treated as qualifying dividends. But if less than 95% of the gross income of each Fund (other than net capital gain) consists of qualifying dividends, then distributions received by individual shareholders of a Fund will be qualifying dividends only to the extent they are derived from qualifying dividends earned by such Fund. For the lower rates to apply, you must have owned your Shares for at least 61 days during the 121-day period beginning on the date that is 60 days before such Fund’s ex-dividend date (and such Fund will need to have met a similar holding period requirement with respect to the Shares of the corporation paying the qualifying dividend). The amount of each Fund’s distributions that qualify for this favorable treatment may be reduced as a result of such Fund’s securities lending activities (if any), a high portfolio turnover rate or investments in debt securities or “non-qualified” foreign corporations. In addition, whether distributions received from foreign corporations are qualifying dividends will depend on several factors including the country of residence of the corporation making the distribution. Accordingly, distributions from many of each Fund’s holdings may not be qualifying dividends.

A portion of distributions paid to shareholders that are corporations may also qualify for the dividends-received deduction for corporations, subject to certain holding period requirements and debt financing limitations. The amount of the dividends qualifying for this deduction may, however, be reduced as a result of such Fund’s securities lending activities, by a high portfolio turnover rate or by investments in debt securities or foreign corporations. All dividends (including the deducted portion) must be included in a corporation’s alternative minimum taxable income calculations.

Distributions from a Fund will generally be taxable to you in the year in which they are paid, with one exception. Dividends and distributions declared by a Fund in October, November or December and paid in January of the following year are taxed as though they were paid on December 31.

You should note that if you buy Shares of each Fund shortly before it makes a distribution, the distribution will be fully taxable to you even though, as an economic matter, it simply represents a return of a portion of your investment. This adverse tax result is known as “buying into a dividend.”

You will be informed of the amount of your ordinary income dividends, qualifying dividend income, and capital gain distributions at the time they are paid, and you will be advised of the tax status for federal income tax purposes shortly after the close of each calendar year. If you have not held Shares for a full year, a Fund may designate and distribute, as ordinary income or capital gain, a percentage of income that is not equal to the actual amount of such income earned during the period of your investment in such Fund.

Each Fund’s investments in partnerships, including in partnerships defined as Qualified Publicly Traded Partnerships for tax purposes, may result in such Fund being subject to state, local or foreign income, franchise or withholding tax liabilities.

Qualified REIT dividends. Under 2017 legislation commonly known as the Tax Cuts and Jobs Act “qualified REIT dividends” (i.e., ordinary REIT dividends other than capital gain dividends and portions of REIT dividends designated as qualified dividend income) are treated as eligible for a 20% deduction by noncorporate taxpayers. The Tax Cuts and Jobs Act does not contain a provision permitting a RIC, such as the Fund, to pass the special character of this income through to its shareholders. It is uncertain whether a future technical corrections bill or regulations issued by the Internal Revenue Service (“IRS”) will address this issue to enable the Fund to pass through the special character of “qualified REIT dividends” to its shareholders.

Excise Tax Distribution Requirements. Under the Code, a nondeductible excise tax of 4% is imposed on the excess of a RIC’s “required distribution” for the calendar year ending within the RIC’s taxable year over the “distributed amount” for such calendar year. The term “required distribution” means the sum of (a) 98% of ordinary income (generally net investment income) for the calendar year, (b) 98.2% of capital gain (both long-term and short-term) for the one-year period ending on October 31 (or December 31, if each Fund so elects), and (c) the sum of any untaxed, undistributed net investment income and net capital gains of the RIC for prior periods. The term “distributed amount” generally means the sum of (a) amounts actually distributed by each Fund from its current year’s ordinary income and capital gain net income and (b) any amount on which each Fund pays income tax for the taxable year ending in the calendar year. Although each Fund intends to distribute its net investment income and net capital gains so as to avoid excise tax liability, each Fund may determine that it is in the interest of shareholders to distribute a lesser amount. The Funds intend to declare and pay these amounts in December (or in January, which must be treated by you as received in December) to avoid these excise taxes, but can give no assurances that their distributions will be sufficient to eliminate all such taxes.

Foreign Currencies. Under the Code, gains or losses attributable to fluctuations in exchange rates which occur between the time a Fund accrues interest or other receivables or accrues expenses or other liabilities denominated in a foreign currency, and the

time such Fund actually collects such receivables or pays such liabilities, are treated as ordinary income or ordinary loss. Similarly, gains or losses from the disposition of foreign currencies, from the disposition of debt securities denominated in a foreign currency, or from the disposition of a forward foreign currency contract which are attributable to fluctuations in the value of the foreign currency between the date of acquisition of the asset and the date of disposition also are treated as ordinary income or loss. These gains or losses, referred to under the Code as “section 988” gains or losses, increase or decrease the amount of a Fund’s investment company taxable income available to be distributed to its shareholders as ordinary income, rather than increasing or decreasing the amount of such Fund’s net capital gain.

Foreign Taxes. Each Fund will be subject to foreign withholding taxes with respect to certain dividends or interest received from sources in foreign countries. If at the close of the taxable year more than 50% in value of a Fund’s assets consists of stock in foreign corporations, such Fund will be eligible to make an election to treat a proportionate amount of those taxes as constituting a distribution to each shareholder, which would allow you either (subject to certain limitations) (1) to credit that proportionate amount of taxes against your U.S. Federal income tax liability as a foreign tax credit or (2) to take that amount as an itemized deduction. If a Fund is not eligible or chooses not to make this election, it will be entitled to deduct such taxes in computing the amounts it is required to distribute.

Sales and Exchanges. The sale of Shares is a taxable event on which a gain or loss is recognized. The amount of gain or loss is based on the difference between your tax basis in Shares and the amount you receive for them upon disposition. Generally, you will recognize long-term capital gain or loss if you have held your Shares for over one year at the time you sell or exchange them. Gains and losses on Shares held for one year or less will generally constitute short-term capital gains, except that a loss on Shares held six months or less will be re-characterized as a long-term capital loss to the extent of any long-term capital gain distributions that you have received on the Shares. A loss realized on a sale or exchange of Shares may be disallowed under the so-called “wash sale” rules to the extent the Shares disposed of are replaced with other Shares of that same Fund within a period of 61 days beginning 30 days before and ending 30 days after the Shares are disposed of, such as pursuant to a dividend reinvestment in Shares of a Fund. If disallowed, the loss will be reflected in an adjustment to the basis of the Shares acquired.

Taxes on Purchase and Redemption of Creation Units. An Authorized Participant who exchanges equity securities for Creation Units generally will recognize a gain or a loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of purchase (plus any cash received by the Authorized Participant as part of the issue) and the Authorized Participant's aggregate basis in the securities surrendered (plus any cash received by the Authorized Participant as part of the issue). An Authorized Participant who exchanges Creation Units for equity securities generally will recognize a gain or loss equal to the difference between the Authorized Participant's basis in the Creation Units (plus any cash received by the Authorized Participant as part of the redemption) and the aggregate market value of the securities received (plus any cash received by the Authorized Participant as part of the redemption). The Internal Revenue Service (the “IRS”), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing “wash sales,” or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether the wash sale rules apply and when a loss might be deductible.

IRAs and Other Tax-Qualified Plans. The one major exception to the preceding tax principles is that distributions on, and sales, exchanges and redemptions of, Shares held in an IRA or other tax-qualified plan are not currently taxable, but may be taxable when funds are withdrawn from the tax qualified plan, unless the Shares were purchased with borrowed funds.

Medicare Tax. An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from a Fund and net gains from redemptions or other taxable dispositions of Fund Shares) of U.S. individuals, estates and trusts to the extent that such person’s “modified adjusted gross income” (in the case of an individual) or “adjusted gross income” (in the case of an estate or trust) exceeds a threshold amount. This Medicare tax, if applicable, is reported by you on, and paid with, your federal income tax return.

Backup Withholding. Each Fund will be required in certain cases to withhold and remit to the U.S. Treasury the applicable backup withholding rate of the dividends and gross sales proceeds paid to any shareholder (i) who has either provided an incorrect tax identification number or no number at all, (ii) who is subject to backup withholding by the IRS, or (iii) who has failed to certify to a Fund, when required to do so, that he or she is not subject to backup withholding or is an “exempt recipient.”

Cost Basis Reporting. Federal law requires that shareholders' cost basis, gain/loss, and holding period be reported to the IRS and to shareholders on the Consolidated Form 1099s when “covered” securities are sold. Covered securities are any RIC and/or dividend reinvestment plan shares acquired on or after January 1, 2012.

For those securities defined as “covered” under current IRS cost basis tax reporting regulations, accurate cost basis and tax lot information must be maintained for tax reporting purposes. This information is not required for Shares that are not “covered.” The

Funds and their service providers do not provide tax advice. You should consult independent sources, which may include a tax professional, with respect to any decisions you may make with respect to choosing a tax lot identification method. Shareholders should contact their financial intermediaries with respect to reporting of cost basis and available elections for their accounts.

State and Local Taxes. You may also be subject to state and local taxes on income and gain attributable to your ownership of Shares. You should consult your tax advisor regarding the tax status of distributions in your state and locality.

U.S. Tax Treatment of Non-U.S. Shareholders. A non-U.S. shareholder generally will not be subject to U.S. withholding tax on gain from the redemption of Shares or on capital gain dividends (i.e., dividends attributable to long-term capital gains of a Fund) unless, in the case of a shareholder who is a non-resident alien individual, the shareholder is present in the United States for 183 days or more during the taxable year and certain other conditions are met. Non-U.S. shareholders generally will be subject to U.S. withholding tax at a rate of 30% (or a lower treaty rate, if applicable) on distributions by a Fund of net investment income, other ordinary income, and the excess, if any, of net short-term capital gain over net long-term capital loss for the year, unless the distributions are effectively connected with a U.S. trade or business of the shareholder. Exemptions from U.S. withholding tax are provided for certain capital gain dividends paid by a Fund from net long-term capital gains, if any, interest-related dividends paid by the Fund from its qualified net interest income from U.S. sources and short-term capital gain dividends, if such amounts are reported by the Fund. Non-U.S. shareholders are subject to special U.S. tax certification requirements to avoid backup withholding and claim any treaty benefits. Non-U.S. shareholders should consult their tax advisors regarding the U.S. and foreign tax consequences of investing in a Fund.

Other Reporting and Withholding Requirements. Under the Foreign Account Tax Compliance Act (“FATCA”), a 30% withholding tax is imposed on payments or distributions made by the Fund to certain foreign entities, referred to as foreign financial institutions or nonfinancial foreign entities, that fail to comply (or be deemed compliant) with extensive reporting and withholding requirements designed to inform the U.S. department of the Treasury of U.S.-owned foreign investment accounts: (a) income dividends and (b) after December 31, 2018, certain capital gain distributions, return of capital distributions and the proceeds arising from the sale of Fund shares. Information about a shareholder in a Fund may be disclosed to the IRS, non-U.S. taxing authorities or other parties as necessary to comply with FATCA. Withholding also may be required if a foreign entity that is a shareholder of a Fund fails to provide the appropriate certifications or other documentation concerning its status under FATCA.

Consult Your Tax Professional. Your investment in a Fund could have additional tax consequences. You should consult your tax professional for information regarding all tax consequences applicable to your investments in a Fund. More tax information relating to the Funds is also provided in the Statement of Additional Information. This short summary is not intended as a substitute for careful tax planning.

DETERMINATION OF NET ASSET VALUE

Each Fund calculates its NAV as of the regularly scheduled close of business of the New York Stock Exchange (“NYSE”) (normally 4:00 p.m. Eastern time) on each day that the NYSE is open for business, based on prices at the time of closing, provided that any assets or liabilities denominated in currencies other than the U.S. dollar shall be translated into U.S. dollars at the prevailing market rates on the date of valuation as quoted by one or more major banks or dealers that make a two-way market in such currencies (or a data service provider based on quotations received from such banks or dealers). The NAV of each Fund is calculated by dividing the value of the net assets of such Fund (i.e., the value of its total assets less total liabilities) by the total number of outstanding Shares, generally rounded to the nearest cent. The price of Fund Shares is based on market price, and because ETF shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount).

In calculating a Fund’s NAV, the Fund’s investments are generally valued using market valuations. A market valuation generally means a valuation (i) obtained from an exchange or a major market maker (or dealer), (ii) based on a price quotation or other equivalent indication of value supplied by an exchange, a pricing service, or a major market maker (or dealer), or (iii) based on amortized cost, provided the amortized cost is approximately the value on current sale of the security. In the case of shares of funds that are not traded on an exchange, a market valuation means such fund’s published NAV per share. A Fund may use various pricing services or discontinue the use of any pricing service.

In the event that current market valuations are not readily available or such valuations do not reflect current market values, the affected investments will be valued using fair value pricing pursuant to the pricing policy and procedures approved by a Fund’s Board of Trustees. A price obtained from a pricing service based on such pricing service’s valuation matrix may be used to fair value a security. The frequency with which a Fund’s investments are valued using fair value pricing is primarily a function of the types of securities and other assets in which the Fund invests pursuant to its investment objective, strategies and limitations.

Investments that may be valued using fair value pricing include, but are not limited to: (i) an unlisted security related to corporate actions; (ii) a restricted security (i.e., one that may not be publicly sold without registration under the Securities Act of 1933, as amended (the “Securities Act”)); (iii) a security whose trading has been suspended or which has been de-listed from its primary trading exchange; (iv) a security that is thinly traded; (v) a security in default or bankruptcy proceedings for which there is no current market quotation; (vi) a security affected by currency controls or restrictions; and (vii) a security affected by a significant event (i.e., an event that occurs after the close of the markets on which the security is traded but before the time as of which the Fund’s NAV is computed and that may materially affect the value of the Fund’s investments). Examples of events that may be “significant events” are government actions, natural disasters, armed conflict, acts of terrorism, and significant market fluctuations.

Valuing a Fund’s investments using fair value pricing will result in using prices for those investments that may differ from current market valuations. Use of fair value prices and certain current market valuations could result in a difference between the prices used to calculate a Fund’s NAV and the prices used by the Fund’s Underlying Index, which, in turn, could result in a difference between the Fund’s performance and the performance of the Fund’s Underlying Index.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often the Shares of each Fund traded on the national securities exchanges at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of the Fund during the past four calendar quarters can be found at www.globalxfunds.com.

TOTAL RETURN INFORMATION

The following Funds had commenced operations as of the most recent fiscal year end: Global X MLP & Energy Infrastructure ETF, Global X SuperDividend® Alternatives ETF, and Global X U.S. Preferred ETF.

The tables that follow present information about the total returns of each Fund’s Underlying Index and the total returns of each Fund. The information presented for each Fund is as of the most recent fiscal year ended November 30, 2017.

“Cumulative Total Returns” represent the total change in value of an investment over the periods indicated.

Each Fund’s per share NAV is the value of one Share of the Fund as calculated in accordance with the standard formula for valuing mutual fund shares. The NAV return is based on the NAV of each Fund and the market return is based on the market prices of the Fund. The price used to calculate market prices is determined by using the midpoint between the bid and the ask on the primary stock exchange on which Shares of the Fund are listed for trading, as of the time that the Fund’s NAV is calculated. Market and NAV returns assume that dividends and capital gain distributions have been reinvested in the Fund at market prices and NAV, respectively.

An index is a statistical composite that tracks a specified financial market or sector. Unlike a Fund, an Underlying Index does not actually hold a portfolio of securities and therefore does not incur the expenses incurred by the Fund. These expenses negatively impact the performance of a Fund. Also, market returns do not include brokerage commissions that may be payable on secondary market transactions. If brokerage commissions were included, market returns would be lower. The returns shown in the tables below do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or the redemption or sale of Fund Shares. The investment return and principal value of Shares of a Fund will vary with changes in market conditions. Shares of a Fund may be worth more or less than their original cost when they are redeemed or sold in the market. A Fund’s past performance is no guarantee of future results.

INFORMATION REGARDING THE INDICES AND THE INDEX PROVIDER

Solactive MLP & Energy Infrastructure Index

The Solactive MLP & Energy Infrastructure Index is intended to give investors a means of tracking the performance of MLPs and energy infrastructure corporations. Midstream energy infrastructure MLPs and corporations principally own and operate assets used in energy logistics, including, but not limited to, pipelines, storage facilities and other assets used in transporting, storing, gathering, and processing natural gas, natural gas liquids, crude oil or refined products. The index limits its exposure to partnerships in order to comply with applicable tax diversification rules. Securities must be publicly traded in the United States. As of January 31, 2018, the index was comprised of 38 securities. The index is comprised of securities that meet certain criteria relating to size and liquidity, as determined by Solactive AG. The index is maintained by Solactive AG.

Indxx SuperDividend[®] Alternatives Index

The Indxx SuperDividend[®] Alternatives Index is comprised of securities that rank among the highest dividend yielding securities in each eligible category of alternative income investments, at the time of index reconstitution, as defined by the index provider. Alternative income investments that are eligible for inclusion in the index fall into one of four classes: MLPs and Infrastructure, Real Estate, Institutional Managers, and Fixed Income and Derivative Strategies. The MLPs and Infrastructure category primarily consists of units of MLPs and shares of infrastructure companies. The Real Estate category provides exposure to global Real Estate Investment Trusts (“REITs”), and gains this exposure through the Global X SuperDividend[®] REIT ETF. The Institutional Managers category primarily consists of shares of BDCs and listed private equity. The Fixed Income and Derivative Strategies category includes exposure to emerging market debt, mortgage and asset backed securities, and option-writing primarily through the purchase of publicly traded CEFs. Each of the index components are selected from a universe of securities that are publicly traded in the U.S. The index assigns weights to each of the four categories in a method that seeks to equalize the volatility contribution of each category, which assigns less weight to higher volatility categories and more weight to lower volatility categories. The index is reconstituted annually, but may rebalance quarterly if any one category deviates more than 3% from its target weight.

ICE BofAML Diversified Core U.S. Preferred Securities Index

The ICE BofAML Diversified Core U.S. Preferred Securities Index is designed to track the broad-based performance of the U.S. preferred securities market. The ICE BofAML Diversified Core U.S. Preferred Securities Index includes different categories of preferred stock, such as floating, variable and fixed-rate preferreds, cumulative and non-cumulative preferreds, and trust preferreds. Qualifying preferred securities must be listed on a U.S. exchange, denominated in U.S. dollars, and have a minimum amount outstanding of \$100 million. Qualifying preferred securities must meet minimum price, liquidity, maturity and other requirements as determined by ICE Data Indices, LLC.

Constituents in the ICE BofAML Diversified Core U.S. Preferred Securities Index are capitalization-weighted based on their current amount outstanding times the market price plus accrued interest. A weighting cap of 10% is applied at the issuer level in order to limit the aggregate weight of a single issuer to 10% at each rebalance. The ICE BofAML Diversified Core U.S. Preferred Securities Index is rebalanced quarterly.

Disclaimers

The Index Providers are independent of the Fund and Global X Management Company LLC, the investment adviser for the Fund ("Adviser"). The Index Providers determine the relative weightings of the constituents of the Underlying Index and publish information regarding the market value of the Underlying Index.

Solactive AG (Solactive) is a leading company in the structuring and indexing business for institutional clients. Solactive runs the Solactive index platform. Solactive indices are used by issuers worldwide as underlying indices for financial products. Solactive does not sponsor, endorse or promote any Fund and is not in any way connected to it and does not accept any liability in relation to their issue, operation and trading.

Indxx is a service mark of Indxx, LLC and has been licensed for use for certain purposes by the Adviser. The Fund are not sponsored, endorsed, sold or promoted by Indxx. Indxx makes no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly. Indxx has no obligation to take the needs of the Adviser or the shareholders of the Fund into consideration in determining, composing or calculating the Underlying Indices. Indxx is not responsible for and has not participated in the determination of the timing, amount or pricing of the Fund Shares to be issued or in the determination or calculation of the equation by which the Fund Shares are to be converted into cash. Indxx has no obligation or liability in connection with the administration, marketing or trading of the Fund.

OTHER SERVICE PROVIDERS

SEI Investments Global Funds Services is the sub-administrator for each Fund.

Brown Brothers Harriman & Co. is the custodian and transfer agent for each Fund.

Stradley Ronon Stevens & Young, LLP serves as legal counsel to Global X Funds[®] ("Trust") and the Trust's Independent Trustees.

PricewaterhouseCoopers LLP ("PwC") serves as the Funds' independent registered public accounting firm for the fiscal years ended November 30, 2016 and 2017. Ernst & Young LLP served as the Funds' independent registered public accounting firm and audited the financial statements of the Funds for the fiscal years ended November 30, 2013, 2014, and 2015.

FINANCIAL HIGHLIGHTS

Each Fund has commenced operations and has financial highlights.

The financial highlights tables are intended to help investors understand each Fund's financial performance since the Fund's inception. Certain information reflects financial results for a single Share of each Fund. The total returns in the tables represent the rate that an investor would have earned (or lost) on an investment in each Fund, assuming reinvestment of all dividends and distributions. PwC served as the Funds' independent registered public accounting firm for the fiscal year ending November 30, 2016 and 2017. Ernst & Young LLP served as each Fund's independent registered public accounting firm and has audited the financial statements and financial highlights of each Fund for the fiscal periods ended November 30, 2013, 2014, and 2015. The

most recent report appears in the Funds' November 30, 2017 annual reports to shareholders, which are available without charge upon request.

⁽¹⁾ The Fund commenced operations on August 6, 2013.

⁽²⁾ The Fund commenced operations on July 13, 2015.

⁽³⁾ The Fund commenced operations on September 11, 2017.

^ The amount shown for a share outstanding throughout the period does not accord with the aggregate net gains on investments for the period because of the sales and repurchases of fund shares in relation to fluctuating market value of the investments of the Fund.

* Per share data calculated using average shares method.

** Total Return is for the period indicated and has not been annualized. The return shown does not reflect the deduction of taxes that a shareholder would pay on Fund distributions or the redemption of Fund Shares.

† Annualized.

†† Portfolio turnover rate is for the period indicated and has not been annualized. Excludes effect of in-kind transfers.

Effective November 1, 2015, the Fund changed its method for estimating the characterization of amounts distributed by master limited partnerships, which correspondingly impacted the financial highlight ratios and per share disclosures to the extent that the fund recorded investment income that differed from amounts previously estimated.

Amounts designated as "—" are either \$0 or have been rounded to \$0.

ADDITIONAL INFORMATION

The Trust enters into contractual arrangements with various parties, including among others, the Funds' Adviser, sub-adviser(s) (if applicable), custodian, and transfer agent who provide services to the Funds. Shareholders are not parties to any such contractual arrangements and are not intended beneficiaries of those contractual arrangements, and those contractual arrangements are not intended to create in any shareholder any right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the Trust.

This Prospectus provides information concerning the Funds that you should consider in determining whether to purchase Fund Shares. Neither this Prospectus nor the SAI is intended, or should be read, to be or give rise to an agreement or contract between the Trust or the Funds and any investor, or to give rise to any rights in any shareholder or other person other than any rights under federal or state law that may not be waived.

OTHER INFORMATION

The Funds are not sponsored, endorsed, sold or promoted by any national securities exchange. No national securities exchange makes any representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Funds particularly or the ability of the Funds to achieve their objectives. No national securities exchange has any obligation or liability in connection with the administration, marketing or trading of the Funds.

For purposes of the 1940 Act, shares that are issued by a registered investment company and purchases of such shares by investment companies and companies relying on Sections 3(c)(1) or 3(c)(7) of the 1940 Act are subject to the restrictions set forth in Section 12(d)(1) of the 1940 Act, except as permitted by an exemptive order that permits registered investment companies to invest in shares beyond the limits in Section 12(d)(1)(A), subject to certain terms and conditions.

The Trust has obtained an SEC order permitting registered investment companies to invest in Shares, as described above. One such condition stated in the order is that investment companies relying on the order must enter into a written agreement with the Trust.

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Funds on an ongoing basis, a "distribution," as such term is used in the Securities Act of 1933 (the "Securities Act"), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker-dealers who are not "underwriters" but are participating in a distribution (as contrasted with ordinary secondary trading transactions), and thus dealing with Shares that are part of an "unsold allotment" within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on NYSE Arca, NASDAQ, or Cboe BZX is satisfied by the fact that the prospectus is available at NYSE Arca, NASDAQ, or Cboe BZX upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.
